

### Description

This Tork Universal Dispenser Napkins embossing and semi-crepe texture gives a quality feel. Identical folded size to full size dispenser napkins provides an open size of 5" shorter making it a big cost savings. Ideal for self-service establishments that care about cost in use.

- Engage with guests through custom print - 75% of napkin users read the message
- Inner bag packaging ensures superior product quality while protecting unused napkins.
- Environmental Label
- 100 % Recycled

### Product Certifications

### Product Details

|                 |        |
|-----------------|--------|
| Unfolded length | 12 in  |
| Ply             | 1      |
| Folded length   | 5 in   |
| Unfolded Width  | 13 in  |
| Embossing       | Yes    |
| Print           | No     |
| Folded width    | 6.5 in |
| System          | N7     |
| Color           | White  |

Environmental Information

|           |  |
|-----------|--|
| Content   | <p>The product is made from</p> <p>Recycled fibers<br/>Chemicals</p> <p>The packaging material is made from paper or plastic.</p>  |
| Material  | <p>Recycled fibers</p> <p>Recycling of paper is an efficient use of resources as the wood fibers are used more than once.</p> <p>High demands are put on quality and purity of recovered fibers, considering each step of the chain (collecting, sorting, transporting, storage, use), to ensure safe and hygienic products.</p> <p>Recovered paper can be produced both from collected newsprint, magazines and office waste. The choice of recovered paper grades, is made for each product, depending on its specific requirements on performance properties and brightness. The paper is dissolved in water, washed and treated with chemicals under high temperature and screened to separate out impurities.</p> <p>Bleaching is a cleaning process of the fibers that is often used. The aim is then to achieve a bright pulp, but also to get a certain purity of the fiber in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety.</p> <p>Bleaching of the recovered pulp is made with chlorine-free bleaching agents (hydrogene peroxide and sodium dithionite). Except for Natural Napkins that are unbleached.</p> <p>For bleached products we use bleaching agents (to increase the brightness of pulp from recovered paper).</p>  |
| Chemicals | <p>All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view.</p> <p>To control product performance we use additives:</p> <ul style="list-style-type: none"><li>• Wet strength agents (for Wipers and Hand Towels)</li><li>• Dry strength agents (is used together with mechanical treatment of the pulp to make strong products like wipers)</li><li>• For colored papers dyes and fixatives (to secure perfect fastness of the color) are added</li><li>• For printed products printing inks (pigments with carriers and fixatives) are applied</li><li>• For multi ply products we often use water soluble glue to secure the integrity of the product</li></ul> <p>In most of our mills we do not add optical brighteners but it often occurs in recovered paper since it is used in printing paper.</p> <p>We do not use softeners for professional hygiene products.</p> <p>High product quality is secured through quality and hygiene management systems throughout production, storage and transport.</p> <p>In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:</p> <ul style="list-style-type: none"><li>• defoamers (surfactants and dispersing agents)</li><li>• pH-control (sodium hydroxide and sulphuric acid)</li><li>• retention aids (chemicals that help to agglomerate small fibers to prevent fiber loss)</li></ul> |

# Tork Universal Masterfold Dispenser Napkin

D780

- Coating chemicals (that help to control the creping of the paper to make it soft and absorbent)

To reuse broke and to utilize recovered fibers we use:

- Pulping aid (chemicals that help to repulp wet strong paper)
- Flocculation chemicals (that help to clean out printing inks and fillers from recovered paper)
- Bleaching agents (to increase the brightness of pulp from recovered paper)

In the cleaning of our waste water we use flocculation agents and nutrients for the biological treatment to secure that no negative impact on water quality comes from our mills.
