viega

Viega.

Connected in quality.

Building on Tradition
Founded 125 years ago, Viega is a privately owned international group of companies. In the United States, Canada, Mexico, and Latin America, Viega specializes in plumbing, heating, and pipe-joining technologies. The values of Viega's founder, Franz-Anselm Viegener, are just as present today as they were when he started the company in 1899. Courage, passion, and innovative spirit are still the basics of Viega's foundation.

At Viega, Safety Is Priority.
Safe, certain, and secure, Viega fittings are designed for peace of mind.

1. In MegaPress stainless fittings, the 420 stainless steel grip ring's teeth cut into the pipe and lock the fitting securely in place.
2. For ½" to 2" fittings, a 304 stainless steel separator ring protects the sealing element from damage by creating a positive physical separation during installation. For 2½" to 4" fittings, a PBT (Polybutylene Terephthalate) separator ring protects the sealing element.
3. The FKM sealing element in MegaPress 304/316 FKM fittings and the EPDM sealing element in MegaPress 316 fittings ensure watertight or airtight connections.

In all MegaPress stainless fittings, Viega's unique Smart Connect technology helps installers ensure that they have pressed all connections.

DANGER!
Read and understand all instructions for installing Viega MegaPress stainless fittings. Failure to follow all instructions may result in extensive property damage, serious injury, or death.

A white dot on Viega MegaPress 304 FKM and 316 FKM fittings indicates Smart Connect® technology with an FKM sealing element. A green dot on a Viega MegaPress 316 fitting indicates Smart Connect technology with an EPDM sealing element. For a current list of applications, please see the Applications Chart.

This document is subject to updates. For the most current Viega technical literature and warranty information, please visit www.viega.us.

Viega products are designed to be installed by licensed and trained plumbing and mechanical professionals who are familiar with Viega products and their installation. **Installation by non-professionals may void Viega LLC's warranty.**

MegaPress Stainless Systems

Viega MegaPress stainless systems can help reduce installation time by up to 90 percent compared to traditional methods of pipe joining. Soldering and welding can be messy and time consuming, and connections are not always reliable. With Viega press technology, installers can make consistent, secure press connections in a matter of seconds, without flame or heavy equipment.

The fittings require no soldering or welding and are installed with electrohydraulic press tools (battery-powered or corded press tools).

Viega MegaPress stainless fittings can be customized for a wide variety of applications in industrial, commercial, or residential projects.

It is the responsibility of the installer or any other parties to adhere to all applicable local rules and regulations governing the nature of the installation.

The use of the system for applications other than those listed or outside of these parameters must be approved by Viega Technical Support (techsupport@viega.us).

Smart Connect Technology – Security Under Pressure

Locating unpressed connections is an important step in the pressure-testing process. Viega MegaPress stainless includes Smart Connect technology, providing quick and easy identification of unpressed connections during a pressure test.

Smart Connect technology is an integral part of the design of the fitting, providing a path for liquids and/or gases from inside the system past the sealing element of an unpressed connection. When pressed according to our Product Instructions, the fluid path is altered, creating a reliable, leakproof connection.

Unpressed connections are located by pressurizing the system with air or water. When testing with water, the proper pressure range is 15 to 85 psi. Pressure testing with air can be dangerous at high pressures. When testing with compressed air, the proper pressure range is ½ to 45 psi. Following a successful Smart Connect test, the system may be pressure tested up to 600 psi maximum for water and 200 psi maximum for air if required by local code requirements.

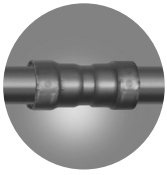

Testing for unpressed connections using Smart Connect is not a replacement for pressure-testing requirements of local codes and standards.

1 Identify an unpressed connection during pressure testing when water flows past the sealing element.

2 Upon identification, use the press tool to press the fitting, making a secure, leakproof connection.

3 Viega MegaPress stainless connections are fast, flameless, and reliable.

Viega MegaPress 304 FKM Fitting Systems

MegaPress 304 FKM fittings are designed to be used with standard IPS ASTM A312 stainless steel-pipe to form a complete press system that is ideal for industrial applications. MegaPress 304 FKM ½" to 2" fittings can be used with Schedule 5 to Schedule 40 stainless steel-pipe and 2½" to 4" fittings can be used with Schedule 10 to Schedule 40 stainless steel-pipe. A MegaPress 304 FKM system can stand up to harsh environments while transporting process water, diesel fuel, lube oil, ammonia, low-pressure steam, or any number of other essential fluids or gases. MegaPress 304 FKM fittings in sizes from ½" to 4" are offered in configurations that include elbows, couplings, reducers, tees, reducing tees, threaded adapters, unions, caps, and flanges.

Components
- Alloy: 304 stainless steel
- FKM sealing element
- 420 stainless steel grip ring
- 304 stainless steel separator ring for ½" to 2" fittings
- PBT separator ring for 2½" to 4" fittings

Operating Parameters
- Operating Pressure: 200 psi max
- Operating Temperatures: 14°F to 284°F (with temperature spikes up to 356°F)

Listings and Certificates
- ABS type approval
- BV (Bureau Veritas)
- CRN 23076.5 A/B/C
- DNV-GL
- IAPMO/ANSI/CAN Z1117
- ICC-ES LC1002
- Lloyd's Register

Compliant With
- ASME B31, B31.1, B31.3, B31.9
- ASTM A312
- IAPMO Uniform Mechanical Code (UMC)
- ICC International Mechanical Code (IMC)
- ICC International Residential Code (IRC)
- National Building Code of Canada (NBCC)
- National Plumbing Code of Canada (NPCC)

Approved Applications
- Low-pressure steam (less than 15 psig)
- Industrial gases
- Compressed air
- Lube oil
- Caustic solutions
- Acid solutions
- Vacuum
- Process water (non-potable)

For more specific information on applications for MegaPress 304 FKM, contact Viega Technical Services at 1-800-976-9819.

MegaPress 304 FKM systems are approved for underground use. When installed underground, MegaPress 304 FKM should have proper corrosion protection in accordance with local and national codes.

Recommended Tools
- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.)
- #56013 MegaPress jaw/ring kit (½ to 2")
- #26200 MegaPress XL PressBooster with 2½" press ring
- #57078 MegaPress XL 3" and 4" press ring kit
- #57081 Z3 Actuator with 2½" press ring (must be used with press gun with minimum 80mm press stroke)

Smart Connect® Technology
MegaPress 304 FKM fittings are manufactured with Viega's unique Smart Connect technology. A design of the fitting, Smart Connect technology allows identification of an unpressed fitting during pressure testing.

Viega MegaPress 316 Fitting Systems

MegaPress 316 fittings are designed to be used with standard IPS ASTM A312 stainless steel-pipe and are ideal for industrial applications. MegaPress 316 ½" to 2" fittings can be used with Schedule 5 to Schedule 40 stainless steel-pipe and 2½" to 4" fittings can be used with Schedule 10 to Schedule 40 stainless-steel pipe. A MegaPress 316 system can stand up to harsh environments while transporting process water, potable water, ammonia, low-pressure steam or any number of other essential fluids or gases. MegaPress 316 fittings in sizes from ½" to 4" are offered in configurations that include elbows, couplings, reducers, tees, reducing tees, threaded adapters, unions, caps and flanges.

Components
- Alloy: 316 stainless steel
- EPDM sealing element
- 420 stainless steel grip ring
- 304 stainless steel separator ring for ½" to 2" fittings
- PBT separator ring for 2½" to 4" fittings

Operating Parameters
- Operating Pressure: 200 psi max
- Operating Temperatures: 0° to 250°F

Listings and Certificates
- ABS type approval
- BV (Bureau Veritas)
- CRN 23076.5 A/B/C
- DNV-GL
- IAPMO/ANSI/CAN Z1117
- ICC-ES LC1002
- Lloyd's Register
- NSF®-61
- NSF®-372

Compliant With
- ASME B31, B31.1, B31.3, B31.9
- ASTM A312
- IAPMO California Plumbing Code (CPC)
- IAPMO National Standard Plumbing Code (NSPB)
- IAPMO Uniform Mechanical Code (UMC)
- IAPMO Uniform Plumbing Code (UPC)
- ICC International Mechanical Code (IMC)
- ICC International Plumbing Code (IPC)
- ICC International Residential Code (IRC)
- National Building Code of Canada (NBCC)
- National Plumbing Code of Canada (NPCC)

Approved Applications
- Industrial gases
- Potable water
- Process water (non-potable)
- Caustic solutions
- Acid solutions
- Vacuum

For more specific information on applications for MegaPress 316, contact Viega Technical Services at 1-800-976-9819.

MegaPress 316 systems are approved for underground use. When installed underground, MegaPress 316 should have proper corrosion protection in accordance with local and national codes.

Recommended Tools
- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.)
- #56013 MegaPress jaw/ring kit (½" to 2")
- #26200 MegaPress XL PressBooster with 2½" press ring

MegaPress 316 FKM systems are approved for underground use. When installed underground, MegaPress 316 FKM should have proper corrosion protection in accordance with local and national codes.

Recommended Tools
- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.)
- #56013 MegaPress jaw/ring kit (½" to 2")
- #26200 MegaPress XL PressBooster with 2½" press ring
- #57078 MegaPress XL 3" and 4" press ring kit
- #57081 Z3 Actuator with 2½" press ring (must be used with press gun with minimum 80mm press stroke)

Smart Connect® Technology
MegaPress 316 FKM fittings are manufactured with Viega's unique Smart Connect technology. A design of the fitting, Smart Connect technology allows identification of an unpressed fitting during pressure testing.

Viega MegaPress 304 FKM Ball Valve, Models 4170 and 4170XL

The MegaPress 304 FKM stainless steel ball valve is equipped with a full port, 304 stainless steel 2-piece body and stainless steel press ends. The ball valve features an FKM sealing element, a 420 stainless grip ring, a 304 stainless seperator ring, FKM stem seals, a locking stainless steel handle, and Viega's Smart Connect technology for easy identification of unpressed connections during pressure testing.

Features

- 304 stainless steel ball
- Body material designation: CF8 1.4301
- Blowout-proof 316 stainless steel stem
- 304 stainless steel locking handle
- Reinforced PTFE seats
- Smart Connect technology
- ISO 5211 mounting pad (for 2½", 3", and 4" only)

Ratings

- Operating Temperatures: 14°F to 284°F (with temperature spikes up to 356°F)
- Max. Operating Pressure ½" to 2": 250 CWP
- Max. Operating Pressure 2½" to 4": 200 CWP

Viega MegaPress 304 FKM 3-Piece Ball Valve, Models 4175.8, 4175.8XL

The MegaPress 304 FKM 3-piece stainless steel ball valve is equipped with a full port, 316 stainless steel 3-piece body and 304 stainless steel press ends. The ball valve features an FKM sealing element, a 420 stainless grip ring, a 304 stainless separator ring, PTFE stem seals, a locking metal handle, and Viega's Smart Connect technology for easy identification of unpressed connections during pressure testing.

Features

- 316 stainless steel ball
- Blowout-proof 316 stainless steel stem
- 304 stainless steel locking handle
- Adjustable packing nut
- Reinforced PTFE seats
- Smart Connect technology
- ISO 5211 mounting pad

Ratings

4	M12 x 140	M14	45	(60)	AF 30 mm	26	(35)

**Sizes up to 3" have 4-bolt flanges; 4" have 6-bolt flanges.*

Approvals

- Conforms to MSS SP-110
- ASME B31
- IAPMO/ANSI Z1157
- NSF®-61
- NSF®-372

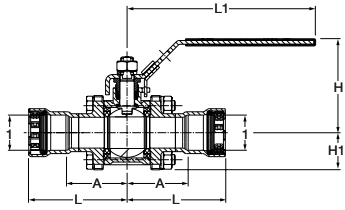

Recommended Tools

For ½" to 2":

- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.)
- #56013 MegaPress jaw/ring kit (½" to 2")

For 2½" to 4":

- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.) for use with the PressBooster
- #26200 MegaPress XL PressBooster with 2½" press ring
- #57078 MegaPress XL 3" and 4" press ring kit
- #57081 Z3 Actuator with 2½" press ring (must be used with press gun with minimum 80mm press stroke)

Sizes up to 3" have 4-bolt flanges; 4" has 6-bolt flanges.

Viega MegaPress 316 Check Valve, Model 5174

Viega's MegaPress 316 Check Valve is a spring check valve with a 316 stainless-steel body, stainless-steel spring, and MegaPress press ends. It is approved for potable water applications.

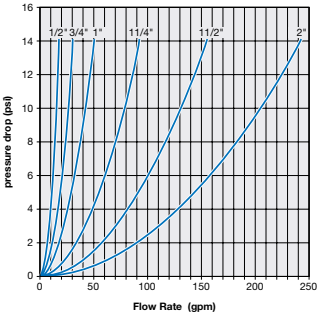

Features
- EPDM sealing element
- 0.5 psi cracking pressure
- Low pressure loss
- Silent operation
- Smart Connect technology

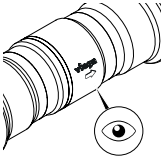

Ratings
- Temperature Range: 0°F to 250°F
- Max. Operating Pressure: 250 psi

Approvals
- Conforms to MSS SP-110
- NSF®-61
- NSF®-372

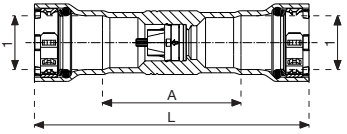

Approved Applications
- Hot and Cold Water
- Chilled Water
- Hydronic Heating Water

Pressure Drop

Flow is in one direction

Viega MegaPress 316 Strainer Valve, Model 5181.1

Viega MegaPress 316 strainer valve has a 316 stainless-steel body, stainless-steel mesh, and MegaPress press ends. The valve features EPDM sealing elements, a 420 stainless steel grip ring, a 304 stainless separator ring, and Viega's Smart Connect Technology for easy identification of unpressed connections during pressure testing.

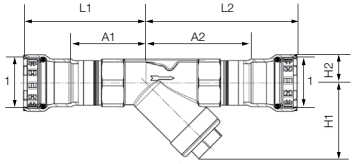

Features
- PTFE gasket
- EPDM sealing element
- MegaPress connections
- Smart Connect technology

Accessories
- Replacement 100 mesh – 5181.11

Ratings
- Temperature Range: 0°F to 250°F
- Max. Operating Pressure: 250 psi

Approvals
- NSF®-61
- NSF®-372

Recommended Tools
- Standard-size press tool (minimum hydraulic ram output of 7,200 lbs.)
- #56013 MegaPress jaw/ring kit (½" to 2")

Viega MegaPress Stainless ½" to 4" Fittings

1 Cut the pipe square. Do not deform the pipe when cutting.

2 Remove burr from inside and outside of the pipe and prep to proper insertion depth using a preparation tool or fine-grit sandpaper.

3 Fittings contain a sealing element, separator ring, and grip ring. Check that all components are present, clean, and undamaged. Do not use oils or lubricants.

4 Mark proper insertion depth as indicated by the following MegaPress Minimum Insertion Depth chart. Improper insertion depth may result in an improper seal. It is recommended that the depth marking be visible on the completed assembly.

MegaPress Minimum Insertion Depth (d)

Pipe size (in)	d (in)	d (mm)
½	1 1/16	27
¾	1 3/16	30
1	1 3/8	35
1¼	1 13/16	46
1½	1 7/8	48
2	2	51
2½	1 13/16	46
3	2 5/16	59
4	3 1/8	80

Keep extremities and foreign objects away from press tool during pressing operation to prevent injury or incomplete press.

5 Refer to the following chart for the minimum distance between fittings to ensure a correct press. Failure to provide this distance may result in an improper seal.

MegaPress Minimum Distance (d)		
Pipe size (in)	d (in)	d (mm)
½	¼	6
¾	¼	6
1	¼	6
1¼	½	13
1½	½	13
2	½	13
2½	½	13
3	½	13
4	½	13

6 While turning slightly, slide fitting onto the pipe to the marked depth. End of pipe must contact stop. It is recommended that the depth marking still be visible on the completed assembly.

Pressing ½" to 1" Fittings

7a Viega MegaPress ½" to 1" fitting connections must be performed with MegaPress jaws and rings.

7b Open the MegaPress jaw and place at right angles on the fitting. Visually check insertion depth using mark on pipe.

7c Start pressing process and hold the trigger until the jaw has engaged the fitting. Jaws will automatically release after a full press is made. Remove the MegaPress jaw from the fitting.

Pressing 1¼" to 2" Fittings

8a Viega MegaPress 1¼" to 2" fitting connections must be performed with MegaPress rings and a V2 actuator.

8b Open the MegaPress ring and place at right angles on the fitting. The MegaPress ring must be engaged on the fitting bead. Check insertion depth.

8c Place V2 actuator onto the MegaPress ring and start pressing process. Hold the trigger until the actuator has engaged the MegaPress ring.

8d Once the press is complete, release the V2 actuator from the MegaPress ring. Remove the MegaPress ring from the fitting.

Pressing 2½" to 4" Fittings

9a Viega MegaPress 2½" to 4" fitting connections must be made using MegaPress XL rings and either the MegaPress XL PressBooster or the MegaPress Z3 actuator.

9b Open MegaPress XL ring and place at right angles on the fitting. The MegaPress XL ring must be engaged on the fitting bead. Check insertion depth.

Pressing with MegaPress XL PressBooster

10a Remove the retaining bolt of the press machine. Slide the PressBooster in via the press jaw fixture. Slide the retaining bolt of the press machine in as far as it will go.

10b To open the PressBooster jaw, pull back the handle at the hinged adapter jaw. Place PressBooster onto the MegaPress XL ring by inserting the ball heads of the hinged adapter jaw into the contact points of the XL ring. Push the handle forward to close the hinged adapter jaw.

10c Hold the trigger until the actuator has engaged the MegaPress XL ring. The PressBooster requires two presses of the trigger to execute a complete press. A third press may be needed to initiate a release cycle to reset the rollers back to the original position.

Pressing with MegaPress Z3 Actuator

11a On the press tool, rotate the retaining pin handle 180 degrees and pull it out to open the slot for the actuator. Insert the Viega Z3 actuator into the slot on the press tool. On the press tool, push the retaining pin back in and rotate it 180 degrees.

11b Open the Viega Z3 actuator by pulling the handle back. Place the open Viega Z3 actuator onto the MegaPress XL ring by inserting the ball heads of the actuator into the contact points of the XL ring. Close the Z3 actuator.

11c Start the pressing process by holding the press tool trigger until the actuator has engaged the XL ring. When the press cycle is complete, the actuator will stop and release. Once the Z3 actuator releases, remove it from the MegaPress XL ring. Remove the MegaPress XL ring from the fitting.

Approved Applications

Viega systems are designed for a wide range of applications across plumbing, heating, cooling, and various industrial uses. For detailed guidance on approved applications and compatible working fluids, please consult the Viega Commonly Approved Applications Chart. If specific project requirements involve unique working fluids or conditions, or your intended application is not explicitly listed, please contact Viega Technical Support (techsupport@viega.us). Our experts can review your specific needs and determine the suitability and compatibility of Viega products, ensuring optimal performance and system integrity for your project while maintaining proper warranty coverage.

Use the below QR code to be taken directly to the Viega Commonly Approved Applications Chart.

INSTRUCTIONS

Sealing Element Description

FKM Sealing Element

MegaPress 304 and 316 FKM press fittings are manufactured with an FKM sealing element installed at the factory. FKM is well known for its excellent resistance to petroleum products and solvents as well as for its exceptional high-temperature performance, which makes it ideal for seals and gaskets in solar, district heating, low-pressure steam, and compressed-air systems.

Definition: FKM
Fluoroelastomer, dull black in color

Maximum Pressure: 200 psi

Operating Temperature: 14°F to 284°F (with temperature spikes up to 356°F)

The FKM sealing element is a special-purpose elastomer typically installed where higher temperatures are required. It possesses excellent resistance to aging, ozone, sunlight, weathering, environmental influences, and oils and petroleum-based additives.

EPDM Sealing Element

MegaPress 316 press fittings are manufactured with an EPDM sealing element installed at the factory. The EPDM sealing element is used mainly for potable water, hydronic heating, low-pressure steam, and compressed-air installations.

Definition: EPDM
Ethylene-Propylene-Diene-Monomer, gloss black in color

Maximum Pressure: 200 psi

Operating Temperature: 0°F to 250°F

The EPDM sealing element is a synthetically manufactured and peroxidically cross-linked, general-purpose elastomer with a wide range of applications. It is resistant to aging, ozone, sunlight, weathering, environmental influences, chemicals, and most alkaline solutions.

The EPDM sealing element is used mainly in the applications of hydronic heating and chilled water. It is not resistant to hydrocarbon solvent solutions, oils, chlorinated hydrocarbons, turpentine, or gasoline.

Viega MegaPress Stainless Steel Pipe Marking Guide

Guide to the ANSI A13.1 Standard for the Identification of Pipes

Viega MegaPress stainless ½" to 4" fittings are compatible with ASTM A312 stainless steel-pipe. All Viega MegaPress stainless piping systems should be continuously marked in accordance with ANSI A13.1 or as required by the local authority having jurisdiction.

Usage	Material Properties	Type of Application (typical)	Color Scheme
Hazardous Materials	■ Flammable or Explosive ■ Chemically Active or Toxic ■ Radioactive ■ Extreme Temperature/ Pressure	■ Process Piping ■ High-Pressure Steam ■ Acids/Corrosives	YELLOW ON BLACK
Low Hazard Materials (Liquid)	■ Liquid ■ Liquid Admixture	■ Cooling Water ■ Grey Water ■ Chilled Water	WHITE ON GREEN
Low Hazard Materials (Gas)	■ Gas ■ Gas Admixture	■ Compression Air ■ Nitrogen (N_2) ■ Argon (Ar)	WHITE ON BLUE

Marker Placement

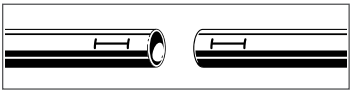

- At all changes in direction
- At both sides of any penetrations (valves, flanges, tees, etc.)
- At frequent intervals on straight run (50 feet is typical)
- Locate pipe markers so they are readily visible
- Provide arrows indicating direction of flow

Pipe O.D. Including Covering		Minimum Length of Label Field Color		Minimum Height of Letters	
(in)	(mm)	(in)	(mm)	(in)	(mm)
¾ to 1¼	19 to 32	8	203	½	13
1½ to 2	38 to 51	8	203	¾	19
2½ to 4	64 to 102	12	305	1¼	32

This guide is for general information purposes only. Pipe markings shall be in accordance with local code requirements.

No-Stop Couplings

No-stop couplings and extended no-stop couplings are often used to conduct repairs. Without a stop, these couplings can slide completely onto a pipe and allow a connection to be made in tighter spaces. Unlike fittings with an integrated stop that have a minimum insertion depth, no-stop couplings have minimum and maximum allowable insertion depths.

Viega MegaPress Stainless No-Stop Couplings				
Pipe Diameter	Minimum Insertion		Maximum Insertion	
(in)	(in)	(mm)	(in)	(mm)
½	1 1/16	27	1⅝	41
¾	1 3/16	30	1 13/16	46
1	1⅜	35	1 15/16	49
1¼	1 13/16	46	2½	64
1½	1⅞	48	2¾	70
2	2	51	2¾	70
2½	1 13/16	46	3⅛	79
3	2 5/16	59	3 11/16	94
4	3⅛	80	4⅜	111

Welding

The following requirements must be considered when welding in the same vicinity as Viega MegaPress stainless fittings.

Welding Requirements

The installer should take precautions to keep the MegaPress stainless connection cool:

- Wrap the connection with a cold, wet rag.
- Protect the connection with a weld blanket.
- Prefabricate solder connections/welded fittings prior to installing the press fitting. (Ensure pipe has cooled before installing the press fitting.)
- Apply heat sink gel or spray or spot freezing.

Welding Adjacent to a Press Fitting

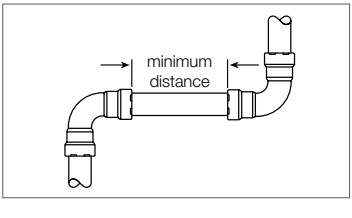

To prevent damage to the sealing element, maintain proper welding distances from the fitting. If welding adjacent to the connection, weld a minimum of four inches away.

Welding in Line With a Press Fitting

To prevent damage to the sealing element, maintain proper welding distances from the fitting. If welding in line with the connection, weld a minimum of three feet away from the connection to protect the sealing element.

Minimum Distance Between MegaPress Connections

Viega MegaPress Stainless		
Pipe Diameter	Minimum Distance	
(in)	(in)	(mm)
½	¼	7
¾	¼	7
1	¼	7
1¼	½	13
1½	½	13
2	½	13
2½	½	13
3	½	13
4	½	13

General Installation Notes

Expansion
Thermal expansion in installed systems generates stress on pipes and appliance connectors. Compensation must be allowed for expansion and contraction that may occur within the piping system. Expansion joints or mechanical expansion compensators may be used to alleviate these stresses.

Electrical Bonding
When properly installed, MegaPress stainless fittings comply with Section 1211.15 Electrical Bonding and Grounding of the Uniform Plumbing Code.

The mechanical press provides continuous metal-to-metal contact between fitting and pipe. The press ensures the continuity of the bonding through this contact.

DANGER!
Electric Shock
An electric shock can cause burns, serious injury, and even death.
- Because all metallic piping can conduct electricity, unintentional contact with a live wire can cause the entire system and components connected to it to become energized. Metal piping is not meant to conduct electricity.
- A properly bonded system creates a safe path for electricity to travel so that the system can't be energized.
- An unbonded or improperly bonded system can be a shock hazard.
- Always ensure that bonding is in accordance with local codes.

Concealed Spaces
The Viega MegaPress Stainless fitting system has been approved for use in concealed spaces. Specific performance tests were conducted to evaluate the fittings for use in concealed spaces. Concealed pipe and fittings shall be protected from puncture threats.

Exposure to Freezing Temperatures
Viega MegaPress 316 systems with EPDM sealing elements can be installed in ambient temperatures down to 0°F. The FKM sealing element available with Viega MegaPress 304 and 316 FKM fittings can be installed in ambient temperatures down to 14°F. When the contents could freeze, piping must be protected per acceptable engineering practices, codes, and as required by local code.

Underground Installations
Viega MegaPress stainless fitting systems and stainless pipe are approved for underground installations. However, installations must meet all state and local codes, including those for underground. Proper authorization must be obtained from the Authority Having Jurisdiction prior to installation.

Corrosion Protection
Viega MegaPress stainless fittings exposed to corrosive action, such as soil conditions or moisture, must be protected in an approved manner in accordance with NACE Standard RP0169-2002 Section 5, 2009 UPC Chapter 6 Section 609.3.1, 2009 UMC Chapter 13 Section 1312.1.3, and in a manner satisfactory to local code requirements. Care should be taken to select hangers of suitable material that is galvanically compatible with the piping system. In addition, systems should be properly sized to minimize the risk of erosion corrosion resulting from excessive velocities.

Pressure Surges
- Pressure surges or transients from fast-acting valves, pump surges, and other sources that result in water hammer may cause damage to many system components, including press fittings.
- When fast-acting valves and/or pumps are incorporated into a system, the designer and installer should isolate press fittings from sharp pressure surges.

Transition Fittings – Threaded
Viega MegaPress stainless systems can be joined with off-the-shelf threaded fittings made of non-ferrous metals. In this regard:
- The threaded connection is made first.
- The press connection is made second.

This process avoids unnecessary torsion on the press fitting.

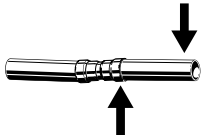

Transition Fittings – Flange
When using Viega flanges, bolt the flange end in place prior to pressing the fitting to the pipe.

Rotating a Pressed Fitting
Once a MegaPress stainless fitting has been pressed, it can be rotated (not by hand), but once rotated more than five degrees, the fitting should be re-pressed to restore resistance to rotational movement.

Deflection

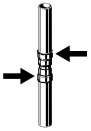

The pressing process can cause deflection (angular misalignment) to occur. When pressing Viega MegaPress stainless fittings in a system, the deformation of the fitting is constant. This allows for a consistent leak-free joint every time and is a result of the pressing technique.

Deflection occurs in the same way for every fitting. The fitting being pressed will move in the direction of the jaw or ring opening.

- Since the fitting will deflect toward the opening of the jaw or ring, the pipe end will deflect in the opposite direction.
- By counteracting the fitting movement, one can minimize the deflection of the fitting and ultimately the pipe.
- When using strut and clamps, deflection is minimized and nearly eliminated, depending on clamp spacing.

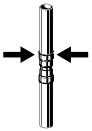

Controlling Deflection
Deflection while pressing can be minimized by utilizing the following installation practices.

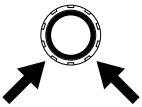

Alternate Press Directions
- Press one end of fitting.
- Make second press on other end of fitting from the opposite side.

Push-Pull Method
- Rings = Push on press tool.
- Jaws = Pull on press tool.
  The press tool can be feathered using the trigger as needed to apply pulling or pushing force to control deflection.

Re-Press
- Press the fitting, once on each side (that is, re-press the fitting a second time on the opposite side).
- Pressing the same connection from the opposite side will usually straighten misalignment between the pipe and fitting.

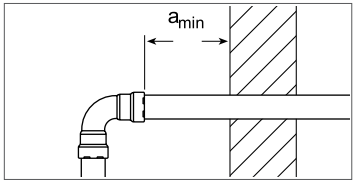

- When pressing overhead piping, it may be inconvenient to alternate sides for each press.
- The natural weight of the piping plus pressing on opposite sides at a 45-degree angle should adequately eliminate deflection.
- This technique can also be used for any horizontal piping and when working above the piping.

Tool Clearances

Minimum distances should be taken into consideration during planning in order to avoid space constraints during installation.

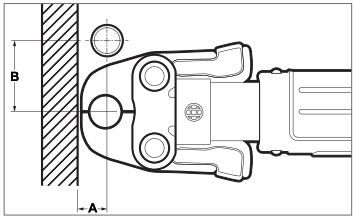

Ensure that the space required for system pressing tools is available if Viega MegaPress stainless fittings will be installed immediately upstream or downstream from wall or floor penetrations.

MegaPress Distance Requirements for Press Jaws Between Pipes and Walls

Pipe Diameter	Minimum space requirement, a_{min} for press tools
	RIDGID RP 330-B, 330-C, and 340-B Press Tool
½" to 1"	1⅞"
1¼" to 2"	¾"
2½" to 4"	¾"

MegaPress Standard Jaws Clearance

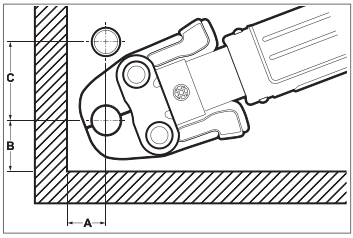

Pipe Diameter	A minimum	B minimum
½"	1	2⅝"

MegaPress Rings with V2/V3 Actuator Clearance Between Pipe, Wall, and Floor

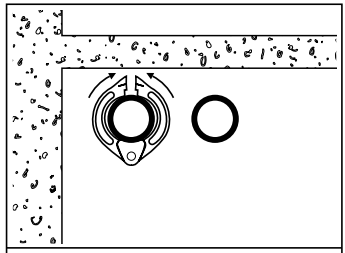

Pipe Diameter	A minimum	B minimum	C minimum
1¼"	3¾"	3¾"	4⅞"
1½"	4"	4"	5⅛"
2"	4"	4"	5⅜"
2½"	4½"	4"	5⅞"
3"	4¾"	4¾"	6¾"
4"	5⅜"	5½"	8¼"

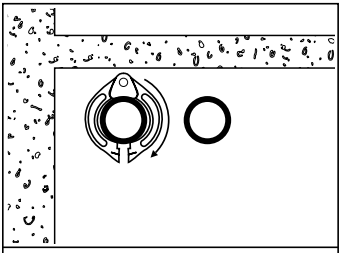

Pressing with Ring and Actuator in Tight Quarters

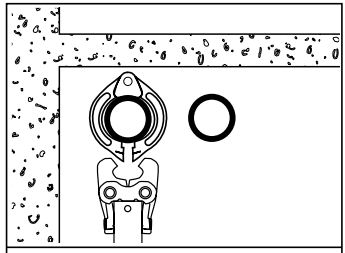

1. Wrap the actuator ring around the press fitting with the opening facing away from you.

2. Close the actuator tight around the fitting.

3. Rotate the actuator ring until the press jaw receptacle is facing toward you.

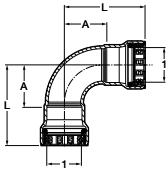

4. Properly insert press jaws and begin the press procedure.

Q What is Smart Connect technology?

A Smart Connect technology provides a quick and easy way to identify unpressed connections during the pressure-testing process. Unpressed connections are located by pressurizing the system with air or water. When testing with water, the pressure range is 15 psi to 85 psi maximum. When testing with air, the pressure range is ½ psi to 45 psi maximum. The flow path is removed during the pressing process, creating a leakproof, reliable connection. Guaranteed.

Q Why is Smart Connect technology so valuable?

A Smart Connect technology gives the user strong peace of mind. It allows for faster testing procedures since you do not have to shut down and drain the system. Costly damages and possible insurance claims and premiums can be avoided because it identifies unpressed connections before they can become a problem. Because of the time savings, projects stay on track.

Q Do I need additional equipment to install Viega MegaPress Stainless systems?

A No. Viega designed Viega MegaPress Stainless fittings to be compatible with the same jaws and press tools that are used for the Viega MegaPress carbon steel systems.

Q If a leak is discovered, is it necessary to drain the system prior to pressing the connection?

A No. It is not necessary to drain the system when making a repair.

Q How would an inspector know they are looking at a good connection?

A Good connections can be proven by performing a pressure test, using the same procedure for a fitting system.

Q What is the lubrication used on the sealing elements?

A The sealing elements are lubricated with a USDA approved H1 lubricant, meeting the requirement of FDA 21CFR. If it is necessary to lubricate the seals in the field, use water only. Do not use petroleum-based lubricants. Petroleum and EPDM are incompatible.

Q How long will the EPDM seal last?

A When properly installed, the EPDM seal and connection will last as long as the piping system.

Q How do I fabricate a system in tight places when using Viega MegaPress?

A If necessary, prefabricate connections that are in tight places and then install.

Q What is the warranty for Viega MegaPress Stainless fittings?

A Viega MegaPress stainless fittings carry a two-year warranty against defects in material and workmanship from Viega.

Q How do Viega MegaPress stainless connections hold up to freezing temperatures?

A Precautions should be taken for any piping system to protect the system from below-freezing temperatures.

Q What level of turbulence occurs in Viega MegaPress Stainless fittings, and will it cause premature wear in the piping?

A The long radius of Viega MegaPress elbows reduces turbulence typically experienced with traditional short-radius fittings. Not reaming the ID of the pipe is the largest contributing factor to turbulence and premature wear of any piping system.
