

DP Scale Reduction Tankless Water Heater Unit

Point-of-Use, Sediment and Scale Reduction, Stainless Inserts

Designed for water heaters and tankless heating systems

Atlas Filtri® DP Reduction Scale Unit is a point-of-use water filtration system for the reduction of sediment and lime scale build up on the inside of water heaters and tankless heating systems.

The polypropylene housing accepts a 5-micron 20" sediment filter including a special grade of polyphosphate media to reduce scale build up on heater coils and heating tank systems.

The wall mount filtration unit is designed to be installed prior to a water heating unit to accommodate flow rates of up to 14 gallons per minute. Design pressure of 125psi (8.6 bar) @ 113°F (45°C) maximum temperature. Standard inlet and outlet connection are 3/4" NPT. Standard head unit is reinforced polypropylene and sump is PET. Standard O-ring is EPDM. Filter Cartridge replacements are estimated at 1 year on 15 grain hard water.

Melt blown CPP smooth cartridges with a length from 20" are made to comply with the most stringent regulations for applications in drinking water. These five micron polypropylene cartridges are suitable for many filtration applications due to its wide chemical-physical compatibility to a variety of water-based solutions.

The polyphosphate incorporated into the center core of the filter is design as a slow release, low acid media specifically for extreme water conditions found in high temperature filtration applications. The media is designed to last one year as it releases slowly into the water supply.

Atlas Filtri is driven to providing our customer with the best available products to meet specific filtration requirements. This is done by using the most advanced manufacturing and design methods. The international patents received come from a constant commitment to research and develop that result in new and innovative products.

Features

- Designed for residential filtration applications
- Accommodates single standard 2.5" OD Filter Cartridges
- 3/4" NPT inlet and outlet fitting connections
- Includes pressure-relief feature that includes an O-ring seal. No spring is used that can result in water leaks
- Knife-edge seal at both ends for a positive and seal eliminating by-pass
- Standard double open-ended cartridges with scale reduction media included
- 5-micron polypropylene melt blown filters
- Polyphosphate glassy bead for slow and low even release of media

Specifications

Materials:

Head Connection: Reinforced Polypropylene Housing
 Construction: PET
 Seal: FDA Grade EPDM
 Filter Construction: Polypropylene
 Filter Media: Glassy Polyphosphate

Working Conditions:

Working Temperature Range:
 Min 39.2°F (4°C) – Max 113°F (45°C)

Media Temperature Range of Dissolved Polyphosphate:
 Max 220°F (104°C) in heated environment

Included

- DP Plastic Housing
- Plastic Bracket
- Filter Wrench
- O-Ring and Lubricant and 5 Micron Sediment/Scale Reduction Filter Cartridge
- Stainless Steel FNPT Threads

PRODUCT SPECIFICATION and PERFORMANCE
