

Hydronic Heating and Plumbing Products

Bell & Gossett

a **xylem** brand

Intelligent, efficient and complete system solutions from the most trusted name in the industry-Bell & Gossett

Bell & Gossett leads the industry with a complete system offering that delivers uncompromising quality and dependability. Efficient B&G products are at the heart of smart system solutions that provide customers with reliable, energy saving solutions backed by over 100 years of experience and innovation.

ESP-Systemwize™ is the industry's only comprehensive system selection tool providing you the ability to choose all system components from a single integrated tool, saving you time and ensuring the most efficient hydronic system design. You get fast, precise equipment selection, pump performance curves, job specific submittals and other technical data.

Bell & Gossett representatives are the industry's most experienced HVAC professionals with a wealth of technical expertise and practical know how. In addition to expert system and product application assistance they also maintain a wide product inventory warehoused locally for immediate delivery of your ordered equipment and parts anywhere in the country.

The Most Complete Line of Hydronic Heating and Plumbing Products.

All from a Single Source - Bell & Gossett.

CIRCULATORS ecocirc® 20-18 | ecocirc+ 20-18

High Efficiency Wet Rotor Circulator with Electronically Commutated Motor (ECM)

Description

The ecocirc 20-18 circulators are designed with a highly efficient electronically commutated permanent magnet motor (ECM Technology). Cast iron flanged models are designed for closed loop hydronic heating and cooling systems, and stainless steel flanged and union body pumps for plumbing systems or open loop heating and cooling systems.

Materials of Construction

Pump Body: Cast Iron and Stainless Steel

Impeller: Impact Modified PPE

Shaft: Ceramic/Alumina

Rotor Can: 316 Stainless Steel

Bearings: Ceramic/Alumina

O-Ring: EPDM

All Other Wetted Parts: 304 or 316 Stainless Steel

Motor Type: Electronically Commutated Permanent Magnet Motor

Insulation Class: F

Check Valve: 1" Noryl Check Valve shipped loose for field installation

ecocirc 20-18

ecocirc+ 20-18

Operating Data

Maximum Working Pressure: 145 psi (10 Bar)

Maximum Working Temperature: 230°F (110°C)

Minimum Working Temperature: 14°F (-10°C)

Ambient Temperature Range: 32°F (0°C - 10°C)

ecocirc 20-18 Features

- Maximum of 20 feet of head or 18 GPM
- 70W maximum power
- 3 modes - proportional pressure, constant pressure, or adjustable speed control
- Fluid temperature: 14-230°F
- CircGuard™- complete integrated system protection
- Automatic air purge to remove any air trapped in the pump
- One turn knob and multicolor LED display for easy reading and setting of the pump
- Check valve included in box
- Insulation shell included

Safety Standards and Protection

Enclosure: Class 1, IP44 (equivalent to NEMA Type 2)

UL Listed to UL 778, UL 1004-1, 1004-7, and UL 60730-1

cUL Listed to C22.2 #108

Electronically Thermally Protected (Integrated Motor Protection)

Motor Insulation Class: F

Stainless steel models are NSF/ANSI-61 certified

ecocirc+ 20-18 Features

The ecocirc+ 20-18 comes with all of the standard features found on the ecocirc 20-18 plus the following premium features:

- Digital display+
- Bluetooth communication+
- 0-10V input+
- eAdapt autolearn and Night Mode+
- Temperature control+ (external temperature sensors not included)

CIRCULATORS ecocirc® 20-18 | ecocirc+ 20-18

High Efficiency Wet Rotor Circulator with Electronically Commutated Motor (ECM)

ecocirc 20-18

One control knob, three control modes

The standard ecocirc 20-18 models include options for either cast iron or stainless steel pump housings. Like all ecocirc 20-18 pumps, they are easy to set up and operate with "just one turn." The interface gives you all the information you need, with a multicolor LED to indicate pump status.

ecocirc+ 20-18

Higher visibility, functionality and connectivity

Our more advanced ecocirc+ 20-18 range takes the idea of smart simplicity to a whole new level. Equipped with the same functionality as the standard ecocirc 20-18 range, these models all come with a three-digit display, communication via Bluetooth® wireless technology, for external monitoring, Night Mode and eAdapt to ensure optimal comfort at minimum cost.

Digital display

The 3-digit display alternates automatically to show power consumption, head and flow rate.

Multicolor LED

Green: Circulator is working properly
Green (blinking): Automatic air-purge is running
Yellow: Night Mode function (+)
Yellow (blinking): Stand-by
Red: Pump failure or dry run

eAdapt

Automatic set-up of circulator performance

Night Mode and Communication selection button
 Night Mode – to be activated with one of the other functional modes – ensures minimal power consumption at night time. Use the communication via Bluetooth® wireless technology to switch to a remote interface and set up the circulator.

Communication LED Green:
 communication via Bluetooth® wireless technology activated.

CIRCULATORS ecocirc® 20-18 | ecocirc+ 20-18

High Efficiency Wet Rotor Circulator with Electronically Commutated Motor (ECM)

Fixed Speed Curve

Standard Operating Modes

CONSTANT SPEED

The pump maintains a constant speed at any flow rate. The desired speed is set on the interface panel of the pump.

CONSTANT PRESSURE ($\Delta p-c$)

The pump maintains a constant differential pressure at any flow demand until the maximum speed is reached. The desired head of the pump can be set via user interface. Recommended for use in systems with small or constant pressure losses.

PROPORTIONAL PRESSURE ($\Delta p-v$)

The differential pressure continuously increases or decreases based on the flow demand. The set point head can be set on the pump user interface. Use for systems with large pressure losses.

NIGHT MODE (ecocirc+ 20-18 only)

The pump will automatically reduce speed when there is an abrupt change in fluid temperature. The change in fluid temperature is from a boiler operating in night time setback mode. The external temperature sensor is used. (Fixed Speed, Constant Pressure, Proportional Pressure)

Temperature Dependent Operating Modes (ecocirc+ 20-18 only)

SET POINT TEMPERATURE ($\Delta p-T$) (ecocirc+ 20-18 only)

The nominal differential pressure set point is modified based on the fluid temperature. Uses an external temperature sensor.

SET POINT TEMPERATURE (T) (ecocirc+ 20-18 only)

The pump maintains a constant temperature in a system, such as domestic hot water system or a single temperature heating system. Uses an external temperature sensor.

eAdapt (ecocirc+ 20-18 only)

The pump will optimize the energy consumption by identifying the ideal duty point.

Air Purge

Air purge will remove the dissolved gases from the pump.

INPUT SIGNALS (ecocirc+ 20-18 only)

One 0-10V (Analog): Speed Control by external controller
 One external temperature sensor input for temperature modes.
 Sensor Type: KYT38, P/N: 104502

CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating, cooling and potable water systems. Available in single and three phase power options.

Description

The ecocirc XL is a high efficiency, variable speed, wet rotor pump with integrated drive. The circulator is available in cast iron or stainless steel and has a broad operating temperature range of 14°F to 230°F (-10°C to 110°C). The ecocirc XL is suitable for both hot and chilled water systems.

The ecocirc XL circulator is designed with a highly efficient electronically commutated permanent magnet motor (ECM/PM Technology). This circulator can enhance hydronics systems with superior quality and dependability. State-of-the-art hydraulics, advanced motor design, intelligent controls, and smart communication capabilities highlight expert engineering across a broad range of HVAC and plumbing applications.

Materials of Construction

Pump Body: Cast Iron or Stainless Steel
 Impeller 1/12-1/16 hp: Polyphenylene Sulfide 1/2 hp+: Stainless Steel
 Shaft: AISI 420 Stainless Steel
 Rotor: Permanent Magnet
 Bearing: Carbon Sleeve
 Gasket/O-Ring: EPDM
 All Other Wetted Parts: AISI 304 Stainless Steel
 Motor Type: Electronically Commutated Motor /Permanent Magnet
 Motor Insulation Class: F

Operating Data

Maximum Working Pressure: 175 PSI (12 Bar)
 Minimum Working Temperature: 14°F (-10°C)
 Maximum Working Temperature: 230°F (110°C)
 Ambient Temperature Range: 32°F - 104°F (0°C - 40°C)

Safety Standards And Protection

- Enclosure: Class 2, IP44 (equivalent to NEMA Type 2)
- UL Listed to UL 778; UL 1004-1, 1004-7; and UL 60730-1
- cUL Listed to C22.2 #108
- Electronically Thermally Protected (Integrated Motor Protection)
- Motor Insulation Class: F
- CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface

CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating, cooling and potable water systems

User-friendly interface

With only four logically placed buttons on an intuitive interface, it's easy to set and operate the new ecocirc XL. Advanced settings enable custom programming, accessible via a PC, smartphone or wireless enabled device.

High visibility

Even in dark mechanical rooms, a bright display with large figures and symbols makes it easy to view pump status.

Economical operation

A highly efficient ECM motor combined with optimized pump hydraulics, keeps operational costs at a minimum.

Keep it insulated

A perfectly molded insulation shell helps in preserving the constant temperature of the pumped heating medium.

Chilled water applications

Electronics are separated from the pump to prevent condensation for worry free operation even at 14°F (-10°C).

Pump protection

Built-in dry-run protection stops pump operation in the absence of water, preventing damage and costly repairs.

Chilled water applications

Electronics are separated from the pump to prevent condensation for worry free operation even at 14°F (-10°C).

Increase your control options

Multiple inputs including start-stop, temperature control, pressure regulation and advanced Modbus or BACnet control provide dynamic system management.

• Small Booster (2 bolts) has a bolt hole to bolt hole dimension of 3-3/16".

• Large Booster (2 bolts) has a bolt hole to bolt hole dimension of 3-7/16".

Input Signals

- One 0-10V (Analog): Speed Control by external controller
- One 4-20mA (Analog): Connection with an external differential pressure sensor for the pressure control mode (two different pressure sensor range: 0-15 PSI PN: 104503 and 0-30 PSI PN: 104504)
- One external temperature sensor input for either Constant Temperature or Temperature Influenced modes. Sensor PN: 104502
- One built-in temperature sensor for either Constant Temperature or Temperature Influenced modes.

Remote Building Management System Capabilities

- The pump can be monitored or controlled by a signal from a BMS (Building Management System). Built-in protocols are BACnet BLT and Modbus. Direct connection to a PC is available.
- An optional wireless module can be added to create a short range wireless field for remote connection to the pump. An internet browser or an App can be used to program the advanced settings.
- Module PN: 104500

CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating, cooling and potable water systems

STANDARD OPERATING MODES

Constant Speed

The pump maintains a constant speed at any flow rate. The desired speed is set on the interface panel of the pump.

Constant Pressure ($\Delta p-c$)

The pump maintains a constant differential pressure at any flow demand until the maximum speed is reached. The desired head of the pump can be set via user interface.

Proportional Pressure ($\Delta p-v$)

The differential pressure continuously increases or decreases based on the flow demand. The set point head can be set on the pump user interface.

 The pump will automatically reduce speed when there is an abrupt change in fluid temperature. The change in fluid temperature is from a boiler operating in night time setback mode. The built-in temperature sensor is used.

CONSTANT TEMPERATURE SPEED CONTROL

T- Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant temperature of the fluid media.

ΔT-Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant differential temperature between the built-in temperature sensor and external temperature sensor.

1-1/2" is the diameter of the suction and discharge for the 2-bolt models.

CIRCULATORS ecocirc® Series

Portable Hot Water Recirculation Pumps - Whole House

Description

e³ circulators are energy efficient circulators using permanent magnet, ECM (electronically commutated motor) technology. The e³ circulators are designed specifically for potable water applications. These circulators are lead-free* and come with a variety of options including a temperature sensor, various body styles, assembled with electrical cord and plug. Timer sold as an accessory (See page 26 for more information).

Materials of Construction

Pump Body: Lead-Free* Brass
 O-Ring: EPDM or Viton
 Bearing: Carbon/Alumina Ceramic
 Impeller: Nylon/PPO
 Motor: High Efficiency ECM
 All Other Wetted Parts: Type 316 Stainless Steel, Shaft-less and seal-less construction

Operating Data Pump

Maximum Working Pressure: 150 PSI (10.3 Bar)
 Maximum Working Temperature: 203°F (95°C)
 Minimum Working Temperature: 50°F (10°C)

Motor

ECM Spherical Motor
 10-28 Watts Power Consumption
 Automatic Overload Protection
 Low in-rush current

Adjustable Speed Switch (Models Without Temp Sensor)

Infinitely variable-speed switch to manually adjust motor speed.

Adjustable Temperature Sensor (Fixed Speed Only)

Adjustable Set Point from 68°F to 158°F (20°C to 70°C)
 Turns circulator OFF when water temperature reaches set point
 Turns circulator ON when water temperature is 10°F (6°C) below set point

Connections

1/2" UltraCirc with Ball & Check Valve
 1/2" Sweat
 1/2" FNPT Threaded

e³ Timer
 (See Page 24)

UltraCirc Pump Housing (Union with Ball & Check Valve)

Standard Pump Housing (Sweat & Threaded)

CIRCULATORS ecocirc® wireless

Potable Hot Water Recirculation Kit

Description

The ecocirc wireless is a potable hot water recirculation kit (a pump and valve combination) for instant supply of hot water supply throughout the entire house.

The ecocirc pump is installed on the supply side of the hot water source and the mixing valve under the sink farthest away from the hot water source. The pump and valve are in constant wireless communication.

How it Works

The desired water temperature at the valve is set directly on the pump with the thermostat dial. The water temperature is constantly checked by the valve and the temperature values are sent to the pump. At approximately 5°F below the desired water temperature, the pump will begin to circulate hot water. This circulation will open the valve for hot water to cross into the cold water line, which creates a return loop back to the hot water source. When the desired temperature is reached, the pump will stop circulating. This is to prevent continuous circulation.

An Optional Push Button / Signal Repeater

A wireless device to provide instant hot water with a push of a button. The push button device will override the timer operation and activate the pump to circulate hot water until the desired temperature is met at the valve. This device also functions as a signal repeater when the pump and valve have a weak signal due to distance or interference.

Operating Data

Maximum Operating Temperature: 203°F (95°C)
 Maximum Operating Pressure: 145 PSI (10 Bar)
 Power Supply: 115 Volts, 60 HZ, 1 Phase
 Power Consumption: 20 Watts
 Operating Noise Level: 30 dB
 Batteries: 2 AA Alkaline
 Estimated Battery Life: 2 Years
 Maximum Transmitter Range: 150 ft

CIRCULATORS autocirc® Series

Potable Hot Water Recirculation Pumps - Undersink

Description

autocirc® circulators are energy efficient using permanent magnet, ECM (electronically commutated motor) technology. The autocirc circulators are designed specifically for standard water heaters. These circulators are lead-free* and are assembled with a timer, cord and plug.

Materials of Construction

Pump Body: Lead-Free* Brass
 O-Ring: EPDM
 Bearing: Carbon/Ceramic
 Impeller: Nylon/PPO
 Motor: High Efficiency ECM
 All Other Wetted Parts: Type 316 Stainless Steel, Shaft-less and Seal-less construction.

Operating Data Pump

Maximum Working Pressure: 145 PSI (10 Bar)
 Maximum Working Temperature: 203°F (95°C)
 Minimum Working Temperature: 50°F (10°C)

CIRCULATORS ecocirc® B 23-5 ACT

Portable Hot Water Recirculation Pumps - Undersink

Description

The ecocirc B 23-5 ACT lead-free* pump was designed with highly efficient electronically commutated permanent magnet motor (ECM/PM technology) specifically for potable water systems. This unique design is perfect for retrofits and systems with tankless water heaters. No recirculation pipe is required.

Materials of Construction

Pump Body: Lead-Free* Brass

O-Ring: EPDM

Bearing: Carbon/Ceramic

Impeller: Nylon/PPO

Motor: High Efficiency ECM

All Other Wetted Parts: Type 316 Stainless Steel, Shaft-less and Seal-less construction

CIRCULATORS ecocirc® SC Solar Pump

Spherical Motor Pump

Application

- The ecocirc solar pump can be used for most circulation pump applications without connection to the power grid with direct connection to a photovoltaic panel.
- This pump is perfect for single family home thermal solar systems or any circulation pump application where conventional power is not available, on closed loop systems

Design

- The only moving part is a hemispherical rotor/impeller unit which sits on an ultra-hard, wear-resistant ceramic ball.
- There are no conventional shaft bearings or seals eliminating bearing noise and seal leaks.
- This pump is robust and has an estimated service life in excess of 50,000 hours.
- All parts exposed to the fluid are completely corrosion resistant.

CIRCULATORS ecocirc® SC Solar Pump

Spherical Motor Pump

e³-SC6N and e³-SC6S

e³-SC4U

Soft Start-up

- When the photovoltaic panel provides sufficient power, the pump goes through the alignment phase by turning the rotor into the position required for start-up.
- Rhe processor then waits until the capacitor is sufficiently charged.
- This enables a start-up with minimal power (less than one watt).

Materials of Construction

Pump Body: Lead-Free* Brass
 O-Ring: EPDM
 Bearing: Carbon/Alumina Ceramic
 Impeller: PPO
 Motor: High Efficiency ECM
 All Other Wetted Parts: Type 316 Stainless Steel Shaft-less, Seal-less Construction

Over-temperature Safety Device

- The ecocirc solar pump comes with an integrated over-temperature safety device which shuts off the pump electronics when reaching temperatures over 230°F.
- After reaching a critical temperature 203°F the pump will lower its speed automatically in order to avoid a total shutdown.

Technical Data

Motor Design:	Electronically commutated spherical motor with permanent magnet rotor/impeller
Voltage:	12 - 24 Volt
Maximum System Temperature:	203°F (95°C)
Maximum Pressure:	150 PSI
Power Consumption*:	Min. start-up power consumption less than 1 Watt, max. power consumption 22 Watts
Current Draw:	0.25 - 1.46 A
Acceptable Media:	Potable hot water recirculation, heating water, water/glycol mixtures, other media on request**
Environment:	IP 42
Insulation Class:	Class F

* Power consumption and start may vary in different installations. **Please check pump performance with more than 20% glycol.

Available Models

Model	Part Number	Description	Weight
e3-SC6S	6055B2000	Lead-Free Brass* Solar Circulator 1/2" Sweat	2 lbs.
e3-SC6N	6055B2001	Lead-Free Brass* Solar Circulator 1/2" NPT	2 lbs.
e3-SC4U	6055B2002	Lead-Free Brass* Solar Circulator 1/2" Union Sweat**	2 lbs.

*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

** Built-in ball check valve and purge valve.

CIRCULATORS Bell & Gossett Cast Iron Wet Rotor Circulators / NRF

Description

A residential or light commercial, maintenance free, axial flanged, in-line, cast iron, wet rotor circulation pump for hydronic heating systems. UL and cUL Listed.

Materials of Construction

Pump Body: Cast Iron
Impeller: Noryl
Shaft: Ceramic
Bearings: Double-Sintered Carbon

Operating Data

Maximum Working Pressure: 150 PSI (10 bar)

Maximum Operating Temperature:

NRF-22 & NRF-9F/LW: 240°F (115°C)

NRF-25, NRF-33, NRF-36 & NRF-45: 225°F (107°C)

Warranty

Bell & Gossett offers a warranty of 3 years from date of manufacture or 18 months from date of installation (which ever comes first) against failure as a result of defects in materials and workmanship.

CIRCULATORS Lead-Free Wet Rotor Circulators for Potable Water / NBF & SSF

Description

A residential or light commercial, maintenance-free, in-line, lead-free* bronze or stainless steel, wet rotor circulator for potable water systems and other applications. Flanged, union or sweat models available.

UL and cUL listed.

Operating Data

Maximum Working Pressure: 150 PSI (10 bar)

Maximum Operating Temperature:

NBF-25, NBF-33, NBF-36, NBF-45: 225°F (107°C)

All Others: 230°F (110°C)

Materials of Construction

Pump Body NBF: 100% Lead-Free* Bronze

SSF: Stainless Steel

Impeller: Noryl

Shaft: Ceramic

Bearings: Double-Sintered Carbon

Warranty

Bell & Gossett offers a warranty of three years from date of manufacture or 18 months from date of installation (which ever comes first) against failure as a result of defects in materials and workmanship.

*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

CIRCULATORS Lead-Free Wet Rotor Circulators for Potable Water / NBF & SSF - continued

Single Speed-NBF/SSF 60 HZ Performance Curve

Three Speed-NBF 60 HZ Performance Curve

CIRCULATORS Series LR™ Maintenance-Free Circulators

Description

The Series LR is a flanged in-line system lubricated circulating pump designed specifically for quiet operation in closed loop systems. The Series LR is available in cast iron body construction for hydronic heating systems or lead-free* bronze body construction for potable water applications.

Materials of Construction

Pump Body: LR-20WR: Cast Iron
LR-15BWR: Lead-Free* Bronze

Impeller: Noryl®

Shaft: Ceramic

Bearings: Carbon

*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

Operating Data

Maximum Working Pressure:
150 PSI (10 bar)

Maximum Operating Temperature:
225°F (107°C)

* 230/60/1 motors available upon request. Models PL-75 and PL-130 have four bolt hole flange connection, all others have two bolt hole flange connectors.

Dimensions are approximate and subject to changes. Contact factory for certified dimensions.

1. B&G's powerful, dry-motor design delivers exceptional performance. . . . 25% more efficient than competition.

2. Precision-machined and balanced alloy steel rotor for superior performance.

3. Quick-connect wire nut leads and dual knock-outs make for fast, sure hook-ups.

4. Solid "Stiff-Shaft" design is constructed of high-strength alloy steel impervious to cracking caused by thermal stresses.

5. XL-11™ Precision-Crafted Bearing System... is permanently oil lubricated... completely maintenance free...precisely positioned for long-life and isolated for quiet operation

6. Advanced close-coupled design increases pump life and efficiency, assures dependable seasonal start-ups and can easily handle difficult water conditions.

7. Tough, durable seal system features a carbon/silicon carbide seal on a stainless steel shaft sleeve for long life and rugged operation.

8. Double sided I-Seal™ design for optimum efficiency.

CIRCULATORS Oil Lubricated Circulators Three-Piece

Operating Data

Maximum Working Pressure: 125 PSI (8.6 bar)
 Maximum Operating Temperature:
 Standard Seal: 225°F (107°C) continuous
 Special Seals: 250°F (121°C) continuous

PD-38 and PD-40 are ball bearing, maintenance-free design.

*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

**Speed motors available upon request. Dimensions are approximate and subject to changes.
 Contact factory for certified dimensions.

1. 1 B&G Motor – The heart of the booster. The finest circulator motor available. Sleeve bearing, oil lubricated with replaceable resilient motor mounts. B&G motors are designed and manufactured specifically for the B&G boosters.

2. Noise dampening coupler. B&G's own flexible spring design adds to quiet operation. Do not accept a substitute.

3. Long bronze sleeve bearings maintain exact shaft alignment. Provides for constant circulation of oil over bearing surfaces.

4. Precision ground pump shaft is oversized to provide large bearing surfaces. Hardened integral thrust collar minimizes end-thrust to ensure long seal and bearing life.

5. The B&G mechanical seal is designed to withstand the wide range of water temperatures, pressures, additives and dissolved solids common in hydronic systems.

6. Centrifugal impeller prevents accumulation of air at seal faces to assure long life. Close impeller/body tolerances minimize water slippage and maximize efficiency.

CIRCULATORS Series e-60 In-Line Mounted Centrifugal Pump Now Available with ECM Motor

Description

A maintenance-free, in-line, cast iron or cast bronze centrifugal pump with optional built-in simple variable speed capability for some sizes.

Designed for a variety of applications

- Hydronic heating & cooling systems
- Domestic water
- Fluid transfer
- Header/boiler recirculation

Product Features

- Maintenance-free pump and motor design
- Unitized internal self-flushing mechanical seal
- XL11® permanent lubrication system
- Factory tested for quality
- ISO 9001 certified
- Durable neoprene coupling
- Compact design
- Easy installation
- Wide range of standard sizes
- Three-year B&G warranty

Materials of Construction

Body: Cast Iron (Bronze Fitted) or Cast Bronze (All Bronze)
Impeller: Cast Bronze
Motor Shaft: Alloy Steel
Pump Shaft: Steel
Volute Gasket: Cellulose Fiber
Shaft Sleeve: Copper Alloy
Bracket: Cast Iron with Stainless Steel Face Plate: 304 Stainless Steel
Mechanical Seal: EPR/Carbon/SIC Standard: -10°F to 225°F

Shown with optional ECM motor

Operating Data

Maximum working pressure: 175 PSI
Working fluid temperature: -10°F to 225°F
Temperatures up to 250°F (121°C) with optional Seal

Series e-60 with ECM Motor Pump is 5% quieter than standard Series e-60

Quiet operation

The XL-11® Precision-Crafted Bearing System, advanced fluid passage design and B&G permanently lubricated motor come together to deliver smooth, quiet, maintenance-free performance.

Unitized internal self-flushing seal

Bell & Gossett's open seal chamber design provides superior flow circulation around the seal faces, resulting in reduced heat buildup, increased particle removal and superior seal-face flushing. The one-piece seal design minimizes internal shear stresses and improves seal alignment, lengthening seal life and reducing friction. These design features contribute to long, reliable seal performance.

Impeller

State-of-the-art hydraulically balanced impellers and resilient-mounted motors provide smooth, quiet operation.

FLANGES Check-Trol™ Isolation Flow Control Flange

Description

The Check-Trol flange is a combination isolation valve, flow control valve, and companion flange for circulators. The ball valve allows the circulator to be removed from the system without draining the system. The internal spring check prevents gravity circulation. Free floating companion flange makes pump installation a snap.

Operating Data

Maximum Working Pressure: 150 PSI (10 bar)
Maximum Operating Temperature: 200°F (93°C)

Materials of Construction

Valve Body: Lead-Free* Brass
Flange: Chrome Plated Steel

Ball: Chrome Plated Lead-Free* Brass

Packing: PTFE

Seat Ring: PTFE

Stem: Lead-Free* Brass

Spring Check: Nitrile, Acetal, Stainless Steel

*CSA certified to NSF/ANSI 372 that product contains less than 0.25% lead content by weight on wetted surface.

Dimensions and weights are approximate and subject to change. Contact factory for certified dimensions. Check-Trol flange is sold with an isolation flange as a pair.

** B1 Dimension is overall length of isolation flange. The part numbers and shipping weights are for one Check-Trol flange and one isolation flange, capscrews and nuts.

ISOLATION FLANGES

Description

The isolation flange is a combination of an isolation ball valve and a companion flange for circulators. The isolation flange allows easy service or replacement of the circulator without the need to drain the system. The isolation flange fits the Bell & Gossett NRF/NBF/SSF wet rotors, Series PL, Series 100, HV, PR, and LR circulators.

CONTROLS ecocirc[®] e³ SERIES TIMER

Description

To increase the overall efficiency of a domestic hot water recirculating system and to reduce water wasted while waiting for hot water, the e3 Timer can be installed on all e3 pumps. The timer is easily installed by removing the motor end cap, plugging in the timer and setting the timer schedule without any wiring. The timer can be used in 3-different selections: ON, OFF and TIMER. The ON selection operates the pump continuously, the OFF selection turns the pump OFF and the TIMER selection (depicted by a clock on the timer) turns the pump on when programmed.

Operational Limits

Power Supply: Internally powered by the e3 circulating pump
Minimum Switch Interval: 30 minutes
Run Modes: ON (Continuous), OFF (Off at all times) and TIMER (run at programmed intervals)

e3 Timer
(Part No. 60AABT001)

For use on 32 bit models
manufactured in 2021 and
after

Pump NOT included

CONTROLS for for NRF, NBF or SSF Circulators

TC-1 Automatic Timer Kit (Part No. 113210)

To increase the overall efficiency of a hot water recirculation system, the TC-1 timer control kit can be installed for use on any single speed NRF, NBF or SSF circulator. The TC-1 timer control is programmable to turn the circulator ON and OFF automatically at preset times. This permits the user to have the pump circulate hot water only during those times when high usage can be expected throughout the day. Power supply minimum interval switch is 15 minutes. Run modes maximum switch current is 16 amps.

AQS-1/2 (Part No. 113223) and AQS-3/4 (Part No. 113224) Aquastat

Designed to thermostatically turn any B&G NBF, NRF, or SSF circulator ON and OFF. The AQ-1/2 or AQ-3/4 will switch the pump OFF at 120°F (48.9°C) and ON at 100°F (37.8°C). The aquastats are available in separate models that will sense the temperature for either 1/2" or 3/4" copper pipe.

AQS-1/2" clips onto 1/2" copper pipe or 3/8" steel pipe

AQS-3/4" clips onto 3/4" copper pipe or 1/2" steel pipe

RELAYS ZONETROL II AZ-1A™ Snap-On Pump Relay

Description

The ZONETROL II AZ-1A snap on relay box is an easy to install single zone pump controller that mounts directly on any Bell & Gossett wet rotor circulator NRF/NBF or Series PL booster. The AZ-1A turns the pump and boiler ON as thermostat calls for heat. Using the wire nuts provided with the package, the AZ-1A is quickly assembled onto any NRF/NBF or 1/12 to 1/6 HP Series PL. The clearly marked TT terminals for the thermostat and the XX isolated end switch terminals make the rest of the hook-up a snap. The AZ-1A can be daisy-chained together to form a maximum of three zones.

The Bell & Gossett AZ-1A is ideal for any single to three zone pump application. Or can be used when adding a zone to an existing system. There's no more need to have a pump controller hanging on the wall, simply install the AZ-1A to our NRF/NBF or Series PL circulators and you are finished.

Features

- Snap-on design allows the AZ-1A to be quickly attached to any B&G wet rotor circulator, reducing your inventory investment (no need to carry "special" circulators with factory mounted controllers)
- Clearly marked terminals make for sure, fast wiring of the system
- Compact design fits in tight locations and presents a clean professional appearance
- 100% factory tested assures reliable operation
- 5 year warranty – the best in the industry
- Daisy-Chain the AZ-1A relays to form up to three zones
- Can be used on any B&G model NRF, NBF or 1/12 to 1/6 HP Series PL pumps

Specifications

Model Number	Part Number	Transformer	Relay	Power Input
AZ-1A	109423	2.5 VA	24 VAC / 5 amps	115 V, 60 Hz, 1 \varnothing

Dimensions (L x W x H): 2-7/8" X 3-1/4" X 2-5/8"

Approximate Shipping Weight: 0.75 lbs

The AZ-1A can be daisy-chained to form up to three zones with simplified wiring.

Low voltage wiring makes multiple relay connections a snap.

RELAYS Comfort-Trol™ Zone Control Valve

Description

Specifically designed to meet the most demanding requirements of residential, institutional and commercial hydronic heating and cooling systems.

Features

- Silent running heat motor saves power via intermittent energizing.
- Unique double torsion spring opens and closes smoothly, prevents water hammering, assures positive shut-off.
- Leaf-type stack switch with blade terminals allow fast installation and no soldering.
- Compact design and ultra-quiet operation is ideal for installation under baseboards of wherever space is limited.
- Available in 3/4" sweat body connections.
- Minimum working pressure 125 psig (862 kPa)
- Fluid temperature range 40°F (4 °C) to 240°F (115°C)

Specifications

BALANCE VALVES Temp Setter™ Thermostatic Valves

Description

Bell & Gossett Temp Setter thermostatic balance valves automatically control the minimum temperature of the hot water that circulates through your domestic hot water system, ensuring thermal balance throughout the system. With a stepless temperature dial, available in either °F or °C, it's fast and easy to set the desired temperature for your system.

For systems utilizing thermal bacterial disinfection, the Temp Setter valve is available with optional bypass that is independent of the valve's thermostatic element. The constant flow of high temperature fluid eradicates bacterial problems such as Legionella.

Temp Setter thermostatic balance valves are the perfect choice to safely and effectively balance your domestic hot water recirculation systems.

Materials of Construction

Body: 316 Stainless Steel

O-Rings: EPDM

Springs: 304 Stainless Steel

Thermostatic Element: Wax

Plastic Parts: POM, ABS, PC

Insulation Block: EPS

Operating Data

Maximum Working Pressure: 145 psi (1,000 kPa)

Maximum Working Temperature: 212°F (100°C)

CSA Certified for NSF/ANSI 61

Temperature Adjustment Range: 98°F - 150°F (35°C - 65°C)

Temperature Accuracy: +3.6°F (+2°C)

Insulation Block: EPS

BALANCE VALVES Lead-Free* Circuit Setter® Plus

Description

The Circuit Setter Plus and Circuit Setter Plus RF provide the perfect balance of adjustability and efficiency for potable water and HVAC systems. They are precisely calibrated for use as a presettable balance valve, variable orifice flow meter and positive shut-off service valve. They are also designed for optimal system efficiency and water conservation. The Circuit Setter Plus and Circuit Setter Plus RF can provide the perfect balancing solutions for your potable water and HVAC system.

Save time, energy and water with the lead-free Circuit Setter Plus and Circuit Setter Plus RF.

- Designed for all plumbing and HVAC systems.
- Provides equal flow throughout all circuits to conserve water and optimize system efficiency.
- Calibrated accurate flow control and measurement.
- Bi-directional design allows any installation configuration.
- Externally adjustable manual balance valve for easy adjustment.
- Reduces pump energy requirements.
- Meets or exceeds stringent codes for potable water.
- Includes memory stop indicator.
- Provides drain option.
- Provides positive shut off and isolation.
- Includes pressure/temperature ports.

Materials of Construction

Body: Brass ASTM B283-C69300*
 Ball: 304 Stainless Steel
 Seat Rings: Glass and Carbon filled TFE
 Readout Valves: Brass with EPT check valves
 Stem "O" Ring: EPDM

Maximum Working Pressure

NPT Models: 400 PSIG (2758 kPa)
 Sweat Models: See table below

BALANCE VALVES Circuit Sentry™ Flo-Setter™ II

Description

The Circuit Sentry Flo-Setter II valve is a field adjustable pressure independent flow limiter that maintains set flow rates regardless of pressure fluctuations in the system; eliminates overflow.

- The unique **GPM dial** is easy to set.
- Requires no instruments, charts or wheels
- Saves pump energy and improves coil efficiency
- No minimum straight pipe lengths required
- Integrated pressure / temperature ports included
- Large open flow paths for clog-free operation
- Integrated isolation/shut-off capability

Materials of Construction

Body: Brass (1/2" - 1-1/4")
Ductile Iron (1-1/2" - 2")

Flow Setting: PA6 20% Glass

Spring: Stainless Steel

Diaphragm: HNBR

O-Rings: EPDM

Maximum Working Pressure

375 PSIG (2585 kPa)

Maximum Operating Temperature

14°F (-10°C) to 248°F (110°C)

Control Range

Maximum 58 PSI (399 kPa) Delta P

Accuracy

+/ - 5%

For minimum differential requirements please refer to submittal A-611 on our website. Maximum differential pressure is 58 PSID.

Minimum temperature is 14°F (-10°C) to 248°F (110°C). Maximum operating pressure is 375 PSI.

NOTE: Model AF valves are configured valves and therefore have no part numbers. They include union tail pieces and can be selected to include optional ball isolation/shut-off valve.

VALVES Flo-Control™ Valves

Description

Flo-Control valves prevent gravity flow in forced hot water systems, and permit summer/winter operation of indirect water heaters.

Features

- Combination straight/angle configurations in sizes 3/4" to 2" for ease of installation.
- Removable cap allows easy cleaning and service without removing pipe connections.
- Manual operating position for vertical lift disc to permit gravity circulation.

VALVES Hydrotrol™ Flow Control Valves

Description

The Hydrotrol (HT) flow control valve is used to prevent overheating of zones due to gravity flow in hydronic heating systems and will permit summer-winter operation of indirect water heater. The HT valve allows fluid to pass when the system or zone pumps start. When the system or zone pumps are not operating, the HT valve remains closed, preventing gravity circulation. The HT valves are designed with a 1/2 turn knob that can be manually opened when draining the system or for bypass purposes. The HT valve can be installed in either the horizontal or vertical orientation.

Operating Data

Maximum Working Pressure: 150 PSI (10 bar)
Maximum Operating Temperature: 250°F (121°C)

VALVES DB-Differential Bypass Valve

Description

The differential bypass valve is used in systems where heating loads may be excluded from the circuit as zone valves close. It controls the excess flow in the system by acting as a bypass while ensuring adequate flow to the remaining open circuits. The differential bypass valve helps reduce velocity noise caused by excess flow through the circuits while maintaining the pump head at a constant value.

For hydronic systems utilizing zone valve

- Controls excess flow in the system when there is reduction in demand
- Available in 3/4" connection
- All brass body with non-ferrous internals

Operating Data

Maximum Working Pressure: 150 PSIG (1,034 kPa)
Maximum Operating Temperature: 230°F (110 °C)
Adjustment Range: 2 to 10 PSI

Materials of Construction

Valve Body: Brass
Seals: EPDM
Spring: Stainless Steel
Knob: ABS

VALVES Pressure Reducing Valves

Description

Reducing valves fill the system to a preset pressure for optimum performance.

Features

- Fast fill feature reduces start-up time and labor.
- Low inlet pressure check valve helps prevent loss of system pressure if the supply water drops below system pressure.
- Convenient cleanable strainer is designed to prevent dirt and sediment from entering the system.
- Union connection available with 1/2" male NPT thread and 1/2" female sweat tail-piece for fast, flexible system connection.
- Lead-Free brass body construction is ideal for potable water systems.

ASME Safety Relief Valves

Description

ASME Safety Relief Valves protect fired and unfired hot water vessels against hazardous operating pressures.

Features

- Engineered in accordance with Section IV of the ASME boiler and pressure code for heating boilers with capacities certified by the National Board of Boiler and Pressure Vessel Inspectors.
- Offer the highest BTUH ratings available on the market today for valves in their class (790,000 to 5,999,000 BTUH)
- EPDM diaphragm operated (cast iron models) and diaphragm assisted (bronze models) have an effective area approximately 5 times greater than conventional "pop-type" relief valves to help overcome the effects of fouling.
- Low differential between opening and closing pressures helps to prevent conditions under which system water might flash to steam and cause hammering.

ACCESSORIES Copper Red Ring Monoflo® Fittings

Description

Copper Red Ring Monoflo Fittings let you use a single pipe to serve as both supply and return main.

Features

- Connect risers to the main, assuring proper diversion of water to each heating unit regardless of type and its position in the system.
- Recommended for most installations including cast iron non-ferrous base boards, free-standing radiation or convectors.
- Only one fitting is needed for most installations for adequate diversion for upfeed radiation. For most applications, a second fitting can be used if higher resistance is required.

Operating Data

Maximum Working Pressure: 150 PSIG (1,034 kPa)
Maximum Operating Temperature: 300°F (149°C)

AIR SEPARATORS EASB-Jr Enhanced Air Separator

Description

Bell & Gossett's Model EASB-Jr Enhanced Air Separator automatically removes entrained air bubbles in hydronic systems. As fluid enters the EASB-Jr, the velocity is decreased creating a low pressure area. The small bubbles are released from fluid and then collected on the coalescing medium. As the bubbles coalesce, they rise to the top of the air separator where they are released to atmosphere through the built-in automatic air vent. The air separator has a bottom 1/2" NPT connection to accommodate a B&G diaphragm expansion tank. The compact design and brass body construction make the EASB-Jr ideal for residential and commercial hydronic heating systems.

Operating Data

Maximum Working Pressure: 150 PSI (10 bar)
Maximum Operating Temperature: 250°F (121°C)

Enhanced Air Separator

Description

Bell & Gossett's Model EAS Enhanced Air Separator is a patented, innovative design in air separators. It has been engineered to remove entrained air from hydronic heating and cooling systems providing far superior air removal compared with other devices available today. The EAS is ideal for residential, institutional and light commercial applications.

EAS- 1-1/2 or EAS-2 Max. Width 5-3/4" (146mm)

Operating Data

Maximum Working Pressure: 150 PSI (10.3 bar)
Maximum Operating Temperature: 250°F (121°C)

Materials of Construction

Body & Cap: Cast Iron
Internals: Stainless Steel
3/4" Large Capacity Air Vent: Brass Body Nonferrous Internals

How It Works

- As system fluid enters through the inlet, (either straight or angle) the diffuser distributes flow evenly across the stainless steel, wire brush-like medium.
- Air bubbles, even micro air bubbles, stick to the brush filaments.
- Trapped air rises above the diffuser through a baffle (not pictured), where the air is then released through an opening on top.
- Deaerated water then goes back into the system.

HYDRONIC SPECIALTIES

RV-125A Readout Valve and RP-250B Readout Probe

The RV-125A is designed for use wherever pressure tappings are required to monitor flow or pressures. The Readout Valve is fitted with an EPT insert which incorporates a unique check valve feature designed to check flow when the Readout Valve is not being used to monitor flow. Use companion RP-250B Readout Probes with the RV-125A Readout Valve. **300 PSIG Working Pressure – 250°F Maximum Operating Temperature**

RV-125 RP-250

TB- Thermoflo® Balancer

A device for instant visual balancing of hot or cold water flows. With a B&G Thermoflo balancer installed in each circuit or zone, the entire system can be quickly balanced to meet original design calculation. No. TB-3/4"- Capacity 1 to 5 GPM. No. TB-1"- Capacity 2 to 10 GPM. **125 PSIG Working Pressure – 250°F Maximum Operating Temperature**

DT-2 Drain-O-Tank® Air Charger

The Drain-O-Tank Air Charger offers a sure, quick way to recharge a water-logged compression tank.

125 PSIG Working Pressure – 240°F Maximum Operating Temperature

AIR VENTS

Model No. 107A High Capacity Air Vent

A rugged High Capacity Air Vent designed to purge free air from liquid systems at **operating pressures up to 150 PSIG**. The Model 107A Air Vent has a cast iron body and bonnet, with stainless steel, brass and EPDM internal components and is suitable for a **maximum operating temperature of 250°F**. The Air Vent has a 3/4" NPT inlet and 3/8" NPT outlet.

No. 98

A high capacity automatic air vent that is designed to remove air in closed loop systems. Materials of construction: Brass body with non-ferrous internals. **Maximum Working Pressure: 150 PSI. Maximum Operating Temperature: 250°F**

No. 97 Automatic Air Vent

A float type vent designed to vent troublesome air from hydronic heating systems. The brass body and the non-ferrous internals provide years of reliable service. The compact design (3-1/8" x 1-7/8") and high operating pressure/temperature (**240°F @ 150 PSIG**) limitations make the No. 97 a must in any hydronic heating system.

No. 87, 67 and 7 Automatic Air Vents

Designed to vent the accumulation of troublesome air wherever it can be trapped. These non-ferrous automatic air vents are 4-3/4" x 2-1/4", 3-3/16" x 1-1/2" and 4-1/16" x 2-3/16" (height and width), respectively, and are rated for a **maximum operating temperature of 240°F at pressures of 150, 35 and 75 PSI, respectively**. The No. 87 has a combination of 1/2" FPT/3/4" MPT connection, whereas No's. 67 and 7 have 1/8" MPT, and FPT connections.

No. 26 Vacuum Breaker

Designed to protect closed vessels and piping systems against collapse when the induced vacuum exceeds design conditions. When used on steam heating systems, the No. 26 Vacuum Breaker controls induced vacuum, permitting normal return of condensate to the boiler. Adjustable range 1/4" to 20" (mercury) vacuum. Factory set to 4" – **240 PSIG Maximum Working Pressure – 300°F Maximum Operating Temperature**

No. 4V "Coin-Operated" Air Vent

Specially designed for the new types of radiators. An important feature is that it projects only slightly, being almost flush with the radiator. **150 PSIG Working Pressure – 250°F Maximum Operating Temperature**

ACCESSORIES PSH - Primary/Secondary Header

Description

The B&G low-loss header, Model PSH, is a combination air separator and manifold that creates independent primary and secondary circuits. The B&G Model PSH is equipped with a purge valve allowing the user to remove any debris deposited on the bottom of the vessel and an air vent releasing trapped air in the system. The insulation, which is provided as standard, prevents water vapors entering from the outside and eliminates the formation of condensate on the PSH body.

Operating Data

With Insulation:

Working Pressure: 150 PSI
 Operating Temperature Threaded: 32°- 210°F
 Operating Temperature Flanged: 32°- 220°F

Without Insulation:

Working Pressure: 150 PSI
 Operating Temperature Threaded & Flanged: 32°- 230°F

Materials of Construction

Body: Steel
 Air Vent: Brass
 Drain Valve: Brass
 Insulation-Threaded: PEX
 Insulation-Flanged: Polyurethane Foam

Connection

1", 1-1/4" and 1-1/2" Female NPT
 2", 2-1/2", 3" and 4" ANSI 150 CLASS Flange

TANKS HFT Diaphragm Tanks • Expansion Tanks for Hydronic Heating

Description

Bell & Gossett HFT expansion tanks are designed to absorb the force of thermal expansion in hydronic heating systems. Series HFT tanks for hydronic heating systems are available in sizes from 2–86 gallons. The Series HFT tank is designed to absorb the force of thermal expansion of heating water to maintain proper pressurization in a closed hydronic system. The heavy duty butyl diaphragm separates system water from the air in the tank preventing water logging problems.

Operating Data

Maximum Working Pressure: 100 PSI (689 kPa)
 Maximum Operating Temperature: 240°F (115°C)
 Standard Factory Pre-charge: 12 PSI (83 kPa)

Materials of Construction

Shell: Carbon Steel
 Diaphragm: Heavy Duty Butyl Rubber
 Connection: Steel

Compression Tanks

Air-tight, ASME constructed. Available in painted steel. Sizes 15 to 505 gallons. Gauge glass tappings are standard. Always use with B&G Airtrol Tank Fittings.

TANKS PTA Diaphragm Tanks

Expansion Tanks for Potable Water Systems

Description

Bell & Gossett PTA expansion tanks are designed to absorb the force of thermal expansion in domestic potable water systems. Tanks for potable water systems, Series PTA (ASME construction) are available in sizes from 2-528 gallons.

Residential/Light Commercial ASME Diaphragm Tanks

Operating Data

Maximum Working Pressure:

PTA-5 thru PTA-210V: 150 PSI (1,035 kPa)

Maximum Operating Temperature: 240°F (115°C)

Materials of Construction

Shell: Carbon Steel

Liner: Polypropylene

Diaphragm: Heavy Duty Butyl Rubber

System Connection: PT-25V thru PT-210V are stainless steel. All others are brass

Factory Pre-charge: 40 PSI (276 kPa)

Commercial ASME Bladder Tanks

Maximum Working Pressure : 150 PSI (1035 kPa)

Maximum Operating Temperature: 240°F (116°C)

Materials of Construction

Shell: Carbon Steel

Liner: Polypropylene

Diaphragm: Heavy Duty Butyl Rubber

System Connection: Bronze

Factory Pre-charge: 55 PSI (379 kPa)

PT-5 thru PT-12

PT-25V thru PT-210V

TANKS Series WTA Hydro-Pneumatic for Potable Well Water Systems

Description

The Series WTA tank will help protect the pump and pressure switches against short cycling. The domestic well tank delivers adequate water under pressure between pump cycles to meet the required demand.

WTA Well Water Tanks (ASME Construction)

WTA-401 Through WTA-405 Diaphragm Tanks

Maximum Working Pressure: 200 PSI (1,379 kPa)
Maximum Operating Temperature: 240°F (116°C)
Materials: Butyl Liner, Butyl Diaphragm, Steel Shell, Carbon Steel System Connection
Factory Precharge: 30 PSI (207 kPa)

WTA-447 Through WTA-457 Bladder Tanks

Maximum Working Pressure: 125 PSI (862 kPa)
Maximum Operating Temperature: 240°F (115°C)
Materials: Butyl Replaceable Bladder, Steel Shell, Malleable Iron System Connection
Factory Precharge: 25 PSI (172 kPa)
All tanks designed and constructed per ASME Section VIII Division 1.

VALVES TPV - Tank Purge Valves

Description

Combination full port shut-off valve and drain valve used to connect an expansion tank to the system. It is important that the pre-charge in an expansion tank be maintained at the proper pressure at all times. This pressure is the lowest system operating pressure. When the tank's pressure is adjusted, there should be no system liquid in it. This pre-charge should be checked and adjusted when:

- Tank is first installed
- If system is started or operating with the incorrect tank pre-charge
- Annually to assure proper pre-charge pressure at all times

The TPV (Tank Purge Valve) is ideal for this as the tank can be isolated from the system, drained and the pre-charge checked and adjusted without draining or shutting down the system.

The TPV also serves as a service valve should the tank need to be removed or have the bladder changed. These valves are furnished standard with a drain valve with a standard 5/8" hose connection.

Operating Data

Maximum Working Pressure:
400 PSIG (2,758 kPa)

Maximum Operating Temperature:
-4°F (-20°C) to 250°F (121°C)

Materials of Construction

Valve Body: Brass

Ball: Chrome Plated

Ball Seal: PTFE

Stem: Explosion Proof

O-Ring: EPDM

These valves are not recommended to be used on potable water tanks.

* All dimensions +/- 0.125 (3.2 mm) tolerance. Dimensions are subject to change. Not to be used for construction purposes unless certified.

HEAT EXCHANGERS

Brazed Plate Heat Exchangers

Description

Model BPX brazed plate heat exchangers offer the highest level of thermal efficiency and durability in a compact, low cost unit. The corrugated plate design provides very high heat transfer coefficients, resulting in a more compact design. The unit's stainless steel plates are vacuum brazed together to form a durable, integral piece that can withstand high pressure and temperature.

The BPX heat exchangers offer a compact design compared to shell and tube exchangers

- 1/6 the size of shell and tube
- 1/5 the weight of shell and tube
- 1/8 the liquid required of shell and tube
- 1/3 to 1/5 of the surface area required

BPX units are ideal for a wide variety of hydronic applications such as:

- Radiant Floor Heating
- Domestic Water Heating
- Snow MELT Systems
- Swimming Pool Heating

Operating Data

Design Pressure: 435 PSI (30 bar)

Design Temperature: 450°F (232°C)

Plates: Stainless Steel

Braze Material: Copper

Connections: From 1/2 inch to 4 inch

Capacity: Up to 800 GPM

Construction Codes : UL, CRN, ASME Code

Stamp Option

Also available in double-wall design.

Designed for dependability - Small size. Big impact.

Mechanical Design:

Design pressures up to 435 PSIG. Maximum design temperature up to 450°F. Minimum design temperature to -310°F.

Construction Codes:

Available codes include UL, CRN, and ASME code stamp.

Materials:

Stainless steel 316L plates. Copper brazed material.

Connections:

From 1/2-inch to 4-inch. Standard connection options include NPT, SAE flanged and sweat. Custom connections available.

Capacity:

Up to 800 GPM and 350 sq.ft. of surface area.

Mounting:

Reduce mounting costs with optional threaded studs or integral mounting bracket.

Larger models are available upon request. 1) Provides approx. 2°F per hour heating with 180°F boiler to achieve 80°F pool temperature.
2. Pool water flow rate usually requires flow by pass from main pool circulation.
3. Chlorinated pool water can be corrosive to SS316L and Copper. Proper control of chlorine levels is required or alternate materials of construction should be considered.

Service and support from the most trusted name in the industry - Bell & Gossett.

The Bell & Gossett name has always stood for uncompromising quality and dependability. That's evident in the way every one of our centrifugal pumps is built and backed by our outstanding customer service and support team.

Your local Bell & Gossett representative is available any time and is an experienced professional with a wealth of technical expertise. In addition to expert system and product application assistance and a wide product inventory warehoused locally, we offer ESP-Systemwize software selection program.

ESP-Systemwize is a Bell & Gossett web-based software that helps you design HVAC systems accurately, effectively and very quickly. You get fast, precise equipment selection, pump performance curves and equipment schedules, submittals, specifications replacement parts and more.

ESP-Systemwize includes:

- Centrifugal Pumps
- Air/Dirt Separators
- Drives and Controls
- Expansion Tanks
- Heat Exchangers
- PIC Valves
- Replacement Parts
- Suction Diffuser and Triple Duty Valve
- Wastewater/Stormwater

The Little Red Schoolhouse® - Training the Industry

Seminars currently offered are:

- Modern Hydronic System Design - Basic*
- Modern Hydronic System Design - Advanced*
- Design and Application of Commercial Heating Systems
- Large Chilled Water System Design*
- Steam Systems Design & Applications
- Plumbing Systems Design

Bell & Gossett has long been known for its dedication to training. The "Little Red Schoolhouse®" has graduated over 60,000 students since it was founded in 1954.

Graduates from the "Little Red Schoolhouse" may be found throughout North America, Europe, Africa, Asia and Australia.

For applications to attend these seminars, please contact a Bell & Gossett Representative in your area. They will have the schedule dates for all seminars and will make all the arrangements for you. As a service and a continuing educational source to the HVAC industry, these seminars are offered free of charge. IACET certified CEU credits are awarded for each seminar.

* The USGBC has approved the technical and instructional quality of the Modern Hydronic Heating Systems - Basic Seminar (15 GBCI CE Hours) and the Large Chilled Water Design Seminar (11 GBCI CE Hours). These courses are approved for GBCI Continuing Education Hours towards LEED Credential Maintenance Programs.

We value your feedback. Please take our 3 question survey at bellgossett.com/survey to let us know how we are doing.
