SERVICE WIRING - HOUSING

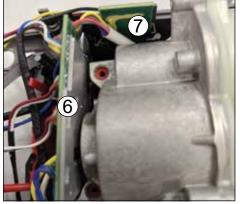

(1) Install PCBA ground wire onto motor housing.

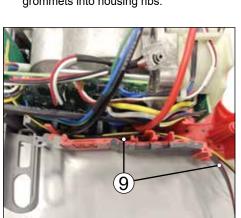

(4) Install ESD trap wire and (5) work light wire in traps as shown.

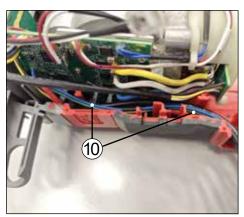

(6) Place PCBA and (7) One-Key board with grommets into housing ribs.

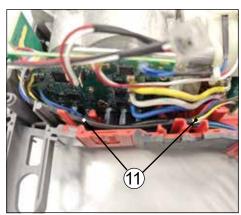

(8) Place solenoid and work light wires into motor housing ribs.

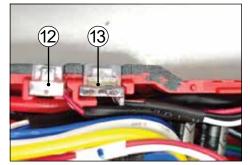

(9) Tuck switch ribbon wire into bottom of housing, followed by CC wires.

(10) Tuck terminal board wires into housing ribs.

(11) Tuck hall board wires into housing ribs.

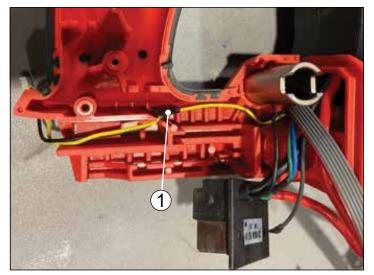

(12) Place BLE light and (13) autostop light into housing slots.

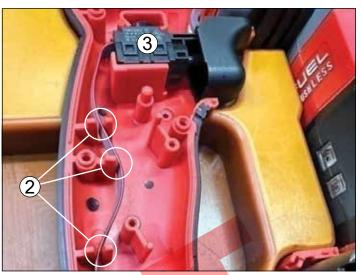

NOTE: Be sure that all components of the electronics kit are seating firmly and squarely in the handle recesses. Avoid pinched wires, be sure that all wires and sleeves are pressed completely down in wire guides and traps. Prior to installing the handle and housing covers onto the handle and housing supports, be sure that there are no interferences.

SERVICE WIRING - HANDLE

(1) Place BLE wire into handle rib, with the heat shrink closest to the battery terminal.

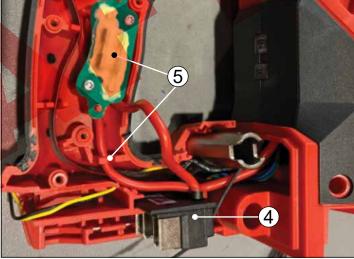

(2) Route switch ribbon wire within handle ribs.

(3) Place switch into fixed ribs.

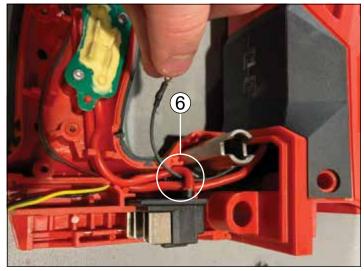

NOTE: The switch wire should sit below the metal tube.

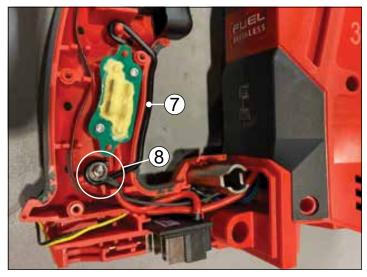

(4) Place terminal into fixed handle ribs.

(5) Place fuse board and wires into fixed handle ribs. NOTE: Be sure fuse to PCBA wire is placed first.

(6) Grasp ring terminal and pass it through the loop created by the B+ wire.

(7) Route ground wire through ribs and (8) install the ESD trap wire over it.
