	† Factory Setting ** Not an actual OD size Status LED will blink once per 100 CFM requested. In torque mode, actual airflow may be lower. Torque mode will reduce airflow when static is above approximately 0.4" water column. • If the air handler is applied in downflow or horizontal configurations, the airflow should not exceed 2000 CFM. Airflow above 2000 CFM could result in water blow-off. • All heating modes default to Constant CFM. • Cooling airflow values are with wet coil, no filter

† Factory Setting															• If the air handler is applied in downflow or horizontal configurations, the airflow should not exceed 2000 CFM. Airflow above 2000 CFM could result in water blow-off.									
** Not an actual OD size															• All heating modes default to Constant CFM.									
Status LED will blink once per 100 CFM requested. In torque mode, actual airflow may be lower.															• Cooling airflow values are with wet coil, no filter									
Torque mode will reduce airflow when static is above approximately 0.4" water column.

Wiring

Table 1. Link Communicating Low Voltage Hook-Up Diagrams

Table 2. 24 Volt Low Voltage Wiring

1 Stage Cooling or Heat Pump with 5TAMX Variable Speed Air Handler

For AC only units, move dip switch 1 to the ON position.*
*if not using tech app for configuration.

Notes:

1. Separate the BK and R wires when using the BK functionality from the thermostat or a Humidistat.
2. Y-in and Y-out connections must be made as shown for freeze protection and internally mounted condensate overflow circuits to function properly.
3. 3rd party condensate switch should break the Y1-in circuit between the thermostat and AHC.
4. X2 is necessary if not using select Trane or American Standard thermostats.
5. For single speed operation, use Y1-out and cap off Y2-out wire.
6. Only needed for heat pump operation.
7. For single stage outdoor operation, must connect Y1-in and Y2-in for full airflow.

R	Red	Y2out	Orange/Red
B	Blue	G	Green
O	Orange	BK	Black

Y1out	Yellow/ Black	W3	White/Red

Four-Way Conversion

To place the unit in the configuration your application requires (upflow, downflow, horizontal right, or horizontal left), simply turn the unit to that orientation. Remember to adjust the badge and the A2L sensor accordingly.

Note: The air handlers are shipped from the factory suitable for four-way application.

Note: Entry for low voltage connections is allowed on either side of cabinet. Refer to Table 17.
