

PEX-LINED NIPPLES & HEAT TRAP NIPPLES

Take your corrosion protection to a higher level.

PROSELECT PEX-lined nipples and heat trap nipples are here to protect your water heater's inside surface from corrosion. Our nipples utilize APCOM's Pex-Shield™ (cross-linked polyethylene) PEX lining.

Here's the difference...ordinary epoxy coated nipples place a thin, uneven "film" between fluid and the steel inner surface. Nicked and "missed" steel surfaces, and exposed end threads, give corrosion a place to start. APCOM's PEX-Shield™ lining provides a seamless, gap free seal, to virtually eliminate fluid migration to the steel. PEX, a dielectric material, helps assure connections without corrosion due to electrolysis for longer-lasting parts. Our electroplated steel nipples with a "Rollover Edge" PEX lining is the best material to help protect the water heater lining from early corrosion.

Product Features

- Corrosion resistant
- Cost Effective
- Cross-linked Polyethylene (PEX) Lining with "Rollover Edge"
- DI-electric Properties
