

# HYDRONIC SPACE HEATERS

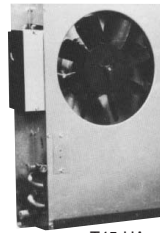

## **Turbonics** **'Toester' Kickspace Hydronic Fan Coils**

For installation under counters, islands or stairs. The fan forces air over a fin tube heat exchanger. The resulting floor level release of warm air makes highly-used rooms such as kitchens and bathrooms 'stocking feet' comfortable.

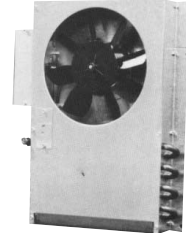

### FEATURES:

- Convertible to wall mount use in surface and recessed cabinet installations (TC-58-AR, TC-58-AS).
- Rugged and reliable 4 pole, encased, 2-speed motor with transflow fan prevents bearing and alignment burnout problems associated with competitive models equipped with only 2 pole, skeletal motors.
- The grille is specially designed to allow cool air to be taken in from the sides and warm air to be expelled from the center, preventing recycling of warm air. The grill design protects and conceals the fins with a length of round edged steel set at an angle.
- Comes with HI-OFF-LOW wall mounted switch for convenience and comfort.
- Low profile, quiet operation.
- Reverse acting thermostat senses the water temperature and determines when the unit should run.
