

Storage, Handling, Installation and Maintenance

STORAGE:

Prior to installation, all ladders should be stored on their original shipping pallets in a dry area, and be protected against having additional items stacked upon or against them.

HANDLING:

Standard practice precautions should be taken whenever handling or moving palletized ladders by forklift.

INSTALLATION:

1. Rail system must be set plumb.
2. Rails must be secured to the wall at standoff locations with anchor bolts.

MAINTENANCE:

Because ladders manufactured by Halliday Products, Inc. are of all aluminum or stainless steel construction, they require minimal maintenance. For optimum product life the manufacturer recommends the following procedures be performed annually:

1. Inspect all welds for cracks.
2. Remove all debris from rung material.
3. Inspect and tighten any loose hardware.
