850	4700	9900	Barrel lock without cap
850	4720	9910	Barrel lock with cap
850	4708	9708	Barrel lock with weather seal
850	4728	9718	Barrel lock with weather seal & cap
850	4701	9901	Barrel lock with hole drilled in head

### PACKAGING

Barrel Locks - 50 per box

F KEYS	Description
8610005	Sliding finger key
8612000	Collet style key
8612500	Repairable collet style
1525520	Replacement cartridge

## F SERIES BARREL LOCK & KEYS

### MAINTENANCE

#### The following User Tips will help you extend the life and performance of your Brooks Barrel Lock Key.

- The key is an instrument, not a tool. Rough handling or abuse can damage the key fingers and prevent them from mating with the barrel lock plunger.
- You will often sense an “click” when the fingers have properly engaged the barrel lock plunger. A slight turn of the handle will assure that proper engagement occurs.
- If a key fails to open the barrel lock the first time, remove the key and reinsert. **DO NOT FORCE THE KEY OR JAM INTO THE LOCK.** If you suspect the keyway is blocked, use a Brooks Barrel Lock Cleaning Tool to remove the dirt. Try the key again.
- Keep the protective cover on the key when not in use.
- Periodically inspect your key for worn or bent fingers. Clean the key with a toothbrush to remove dirt and other material that can collect on and under the key fingers.
- Do not use lubricant on keys or barrel locks. LPS-1, a non lubricating cleaner for electronics, is OK.
- Always install a plastic weather cap on the head of the barrel lock, or a plastic cap on the seal adapter to keep dirt and insects out of the barrel lock keyway.

### ACCESSORIES

#### Weather Cap

Completely covers the lock head protecting it from water, dirt and debris

#### Cleaning Tool

Clears dirt and debris from a blocked keyway enabling better key function

#### Toolless Roto Seal

Securing with a wire seal deters tampering attempts with a picking tool
