

# The safe choice

What makes clay different?

- Clay is resistant to rust and corrosion – the common results of combustion by-products.
- Clay flue lining has a smooth interior that resists creosote build-up – the primary cause of chimney fires. (Chimney fires result in approximately 150 deaths and \$200 million in damages each year.)
- Clay is a slow conductor of heat – metal is not. This heat resistance minimizes the risk of overheating surrounding masonry and wood structures.
- Clay products comply with local building codes. When installed to specification, Logan Clay products ensure a safe and reliable fireplace and chimney system.
- Clay is fireproof. And, unlike metal, clay does not conduct electricity. When lightning strikes a masonry chimney, the electricity is much less likely to travel to other, more combustible areas of your home.

## A variety of clay products

In addition to our fireplace systems, The Logan Clay Products Company offers a full line of sewer pipe, available in numerous sizes and custom-made fittings. We also offer a full line of architectural landscaping products, available on-line at [www.loganclaypipe.com](http://www.loganclaypipe.com) and [www.garden-accents.com](http://www.garden-accents.com).

## Satisfaction guaranteed

Every handcrafted Logan Clay chimney top and precision flue liner must pass our exceptionally high standards of excellence. If they do not, they don't ship. Period.

Our limited warranty. Logan Clay Products (Logan) warrants its products to be free from defects in material and workmanship as manufactured. If a product does not conform to this limited warranty, Logan will, at its option, replace the defective product (FOB the manufacturing site) or refund the amount of the purchase price the customer paid Logan for the defective product. The remedy of replacement or refund is the customer's sole remedy against Logan. **In no event shall Logan be liable for incidental or consequential damages, and in no case will Logan's liability exceed the sale price of the product. Logan makes no other express or implied warranties including, without limitation, merchantability, fitness for a particular purpose, or against infringement of any patent.**

## Quick shipment

At Logan Clay, we stand by our commitment to ship our products within 24 to 48 hours of taking your order.

# Flue Liners & Chimney Tops

Enhance your home with the  
beauty and protection of natural clay.

LOGAN

**LOGAN**  
*Naturally*

When installing a fireplace or chimney system,

there is a great deal at stake – including the

beauty, safety and value of your home.

## Natural clay...

While synthetic and factory-made systems may cost

slightly less than masonry and natural clay, a true masonry

fireplace eliminates the potential for most long-term

difficulties common with cheaper fireplace systems.

**For thousands of years,  
clay has proven its value and  
longevity through a variety of  
uses. And for over 100 years,  
The Logan Clay Products Company  
has proven itself as the nation's  
premier manufacturer of quality  
clay products.**

# Quality that comes from the earth

Our products are created from the finest raw materials, selected and mined within miles of our manufacturing facility in Logan, Ohio.

While our chimney tops are handcrafted by some of the industry's finest craftsmen, our flue liners are precision cut to be an exact fit.

The "green" products are dried and then fired in a technologically advanced kiln.

Our completed products are consistently of the most exceptional quality. If not, they simply do not ship. Our strict quality control process ensures shipment of only the highest quality products, without structural flaws.

## Chimney Tops

Logan Clay chimney tops are handcrafted to exacting standards of beauty and precision. These classic designs will top off your home and fireplace system with a remarkable note of distinction. They might also serve as a beautiful addition to your garden – or even as accent lighting.

## Flue Liners

Logan Clay flue liners are precision cut to correct lengths – surpassing all applicable ASTM specifications. These liners are dense and strong, and they never sag or lose their shape.

In a computer-controlled tunnel kiln, our flue liners are fired and hardened at nearly 2,000°F, preventing much breakage due to transportation and handling.

Our flues also prevent product confusion at the dealer and building supply levels. Logan Clay flues (13" x 13" and smaller) are the only liners in the industry imprinted with the product size description on the liner.
