Sway Brace Swivel Attachment Fig. AF076

Method 1 – Connection to Brace Member First

- 1 Slide the brace member over the lower jaw until it contacts the back wall.
- 2 Hand tighten the set screw until it contacts the brace member. Continue to torque the set screw until the head breaks off.
- 3 Rotate the brace assembly up to the fastener or the related seismic structural attachment and connect through the mounting hole.
- 4 Tighten per the fastener or structural attachment specifications.
- 5 Ensure the brace angle is within the specified range.

Notes: The cross bolt should be hand tight. For visual inspection, at least one thread should be exposed.

Method 2 – Connection to Structure First

- 1 Connect the AF076 to the fastener or the related seismic structural attachment.
- 2 Tighten per the fastener or structural attachment specifications.
- 3 Slide the brace member over the lower jaw until it contacts the back wall.
- 4 Hand tighten the set screw until it contacts the brace member. Continue to torque the set screw until the head breaks off.
- 5 Rotate the brace member until the brace angle is within the specified range.

Notes: The cross bolt should be hand tight. For visual inspection, at least one thread should be exposed.
