# SOCKETS & ACCESSORIES.

DESIGNED TO INCREASE TORQUE.

The radius corner design of Blackhawk™ by Proto® sockets allows contact with the flat edges of the fastener, not the points. This style of contact moves the driving force from the corners to the flat areas, increasing the torque on the fastener, reducing rounding and increasing safety. Ratchets, sockets and accessories are double-nickel chrome plated for a corrosion resistant, full polish finish.

# SCREWDRIVERS, NUTDRIVERS, HEX KEYS & BITS.

JUST THE RIGHT MIX.

The Blackhawk™ by Proto® line of tools includes a core assortment of drivers, bits and keys to handle most fastener turning operations in automotive and light-industrial applications. Blackhawk™ by Proto® screwdrivers have clear extruded handles which help reduce stress and fracture potential, and hold up to common solvents and chemicals found in automotive and industrial facilities. Handles are large and four-sided for increased torque and easy turning. Precision-formed alloy steel bars are heat-treated and nickel-chrome plated to provide wear resistance with excellent torque and bend strength. The narrow blade slotted drivers feature serrated tips that provide additional bite on slotted fasteners. Cold formed Phillips® drivers provide for better screwdriver-to-fastener fit.
