

Protecting Rooftop HVAC Equipment, Ductwork & the Building Envelope While Ensuring HVAC System Efficiency

As a leading pioneer in the HVAC sealant industry, Carlisle HVAC's products are contractor approved, award winning and now backed by a warranty you can trust.

The Hardcast Foil-Sealant Duct Sealing System, a system that reduces ductwork air leakage, energy loss and moisture intrusion, is a combination of rolled sealant and mastic. When properly installed, the Hardcast Foil-Sealant Duct Sealing System is eligible for a 10-year material only warranty.

This system includes Hardcast's Iron-Grip® 601, Spray-Seal™ or Versa-Grip™ 181 liquid mastic sealant. Once the liquid sealant has cured completely; the mastic is overlaid with a 4" wide strip of AFT-701 rolled sealant. This non-cracking, flexible, UV resistant Foil-Sealant Duct Sealing System will help meet the ASHRAE 90.1 2012 Duct Construction Handbook requirement of less than 2% air leakage on outside supply, return and exhaust ductwork for years to come if properly installed, maintained and used for the purpose intended by Carlisle HVAC.

Carlisle HVAC encompasses the Hardcast brand of Duct Sealants and Adhesives, the DynAir brand of Duct Hardware, and Nexus Duct Flange Connecting System. Carlisle HVAC manufactures its products to exceed the highest performance and quality standards. Hardcast duct sealing and DynAir airflow management solutions ensure that your HVAC system ductwork complies with the latest Codes. The sealing of ductwork, adequate airflow and proper air exchange in a facility is critical to its health, comfort and performance. Carlisle HVAC helps you meet these requirements by providing not only the longest lasting duct sealing options but also the best airflow management hardware. Ask us how we can help you make your HVAC system perform at peak efficiency.
