

Eliminator[®] Deep Vacuum Pump OPERATING INSTRUCTIONS & PARTS MANUAL

2-Stage, Direct Drive

Specifications

Models DV-3E, DV-4E, DV-6E 워

MOTOR

1/2 HP, 60 HZ, 1725 RPM; Capacitor start; Automatic thermal overload protected.

INTAKE PORTS

1/4 x 3/8 Male Flare

FREE AIR DISPLACEMENT

CFM	Liters Per Minute
3	85
4	113
6	170

Models

DV-3E-250, DV-4E-250, DV-6E-250

1/2 HP, Dual Cycle, 50/60 HZ, 1425/ 1725 RPM; Capacitor start; Automatic thermal overload protected.

INTAKE PORTS

1/4 x 3/8 Male Flare

FREE AIR DISPLACEMENT

50 HZ		60 HZ	
Liters Per			Liters Per
CFM	Minute	CFM	Minute
2.5	71	3	85
3.3	95	4	113
4.95	142	6	170

In order to make the best use of your investment, familiarize yourself with the new features and operating instructions before starting pump. With just routine care your *Eliminator* will give you years of reliable service by following proper maintenance guidelines. *Eliminator* pumps are designed for deep vacuum work in Air Conditioning and Refrigeration Systems.

IMPORTANT: Use oil specifically refined for deep vacuum pumps. Using oil not refined for deep vacuum pumps and/or operating with contaminated oil will void warranty.

Close Drain Finger Tight.

NOTE: Eliminator[®] pumps are not to be used on Ammonia or Lithium Bromide (salt water) systems. Pump maintenance is the responsibility of the owner.

Each *Eliminator* pump has been factory tested to guarantee 25 micron or better and listed CFM performance. The serial number has been recorded. Complete and mail the Warranty Registration Card within 10 days of purchase to validate your warranty. You will be notified of any technical updates.

25,400 Microns = 1"

IMPORTANT This unit has been drained for shipment. DO NOT ATTEMPT TO OPERATE WITHOUT ADDING OIL.

OIL CAPACITY.

Being just a teaspoon low affects the ultimate vacuum.

Model DV-3E 24.5 oz.

Models DV-4E & DV-6E 22.5 oz.

Slowly add oil until oil level rises even with arrows on front of cover. Replace oil fill plug.

If oil is too low, you will hear air out of the exhaust. If the oil level is too high, excess oil will be blown out the exhaust.

Pump oil should be changed after each use. If system is heavily contaminated, oil may have to be changed several times during evacuation.

After initial fill up, best to check oil level with pump running.

OPERATION.

IMPORTANT

DO NOT START PUMP BEFORE ADDING OIL

The following procedures will prevent oil from being drawn into cartridge and creating hard start-up.

START-UP

Close both sides of manifold and make connection to vacuum pump or auxiliary blank-off equipment. Start pump.

SHUT-DOWN

Crack open unused port to break vacuum. Allow pump to run 2-3 seconds. Shut down and remove hose connections and cap intakes.

CHANGING OIL

To reach deep vacuum, Eliminator pumps need clean, moisture-free oil throughout evacuation.

Care should be taken to avoid contact on skin and clothing when changing oil. Used oil should be disposed of in a leakproof corrosive-resistant container.

- After every evacuation while pump is warm and oil is thin, place pump on level surface and open oil drain. Oil can be forced from the pump by opening one intake and partially blocking the exhaust with a cloth while the pump is running. Do not operate the pump for more than 5 minutes using this method.
- 2. Slowly add oil until oil level rises even with arrows on front of cover. Replace oil fill plug.

After Evacuation, Oil Contains Rust Forming Water and Corrosive Acids. Drain Immediately While Pump Is Warm.

FLUSHING

If the oil is badly contaminated, flushing may be necessary. Slowly pour 1/3–1/2 cup of fresh JB vacuum pump oil into the

intake connection while pump is running. Repeat as required until contamination is removed from oil reservoir, pump rotors, vanes and housing. Dispose of all oil used in flushing of pump.

Deep Vacuum Accessories

Designed for all pumps without internal blankoff valve to isolate pump from system.

D10162 SHUT-OFF VALLVE 1/4" FE QC x 1/4" Flare

1/4" FE QC X 1/4" Flare

O-ring quick coupler valve excellent for blanking off any vacuum system. Excellent for pressure up 500 lbs.

REPAIR PARTS

No Longer available

REF. NO.	PART NO.	DESCRIPTION	
1	PR-1♦	Sight Glass	
2	PR-2♦	Drain Valve	
3	PR-10	Cover Assy. Includes Sight Glass and Drain Valve	
4	PR-403	DV-3E Cartridge Complete w/O–Rings and Cover Seal	
4	PR-404	DV-4E Cartridge Complete w/O-Rings and Cover Seal	
	PR-406	DV-6E Cartridge Complete w/O-Rings and Cover Seal	
5	PR-217	Cover Seal	
6	PR-3	Shaft Seal	
7	PR-315	Trap Intake O-Ring	
8	PR-20♦ PR-308	Flexible Coupler (3 Parts) Flexible Section Only	
9	PR-62	Pump Base (Includes Rubber Feet)	
10	PR-59	Pump Feet (Qty 2)

• Coat with thread sealant when replacing

TROUBLESHOOTING CHART

Symptom	Possible Cause(s)	Corrective Action
Pump won't start.	 Power cord not plugged in securely. Motor switch not on. 	 Plug power cord in securely. Turn motor switch to ON position.
	3. Pump temp. below 30°F.	 Warm up pump to 30°F & turn motor switch on.
	4. Inconsistent line voltage.	 Line voltage must be within 10% of 115 volt.
Pump won't pull deep vacuum.	1. Contaminated oil.	1. Change oil.
	2. Oil level too low.	2. Add oil.
	3. Air leak in system being evacuated.	3. Locate & repair leaks.
	 Pump inlet fittings missing or not tightened. 	4. Clean or replace O-ring.
	5. Coupler slipping	Tighten coupler setscrews to flats of cartridge and motor.
Oil drips from point where shaft enters the pump housing.	Damaged oil seal.	Replace.
Pump shuts down and will not start.	Thermal overload may be open.	Disconnect pump from system. Wait about 15 minutes for motor to cool and turn it on again. If it cycles off again, return pump to factory for repair.
Pump cycles on and off from a completely cold start and then runs smoothly.	Oil backed up into cartridge and was being cleared out. Pump has not been shutdown properly.	1. Remove 1/4" cap. 2. Turn pump on.

PUMP MOTOR

Pump and oil must be above 30° F. Line voltage must be equal to motor nameplate $\pm 10^{\circ}$. Normal operating temperature is approximately 160° F, which is hot to the touch. Line voltage and ambient conditions will affect this somewhat. Motor has automatic resetting thermal overload protection. *Eliminator* is designed for continuous duty and will run for extended periods without overheating.

WARRANTY

Eliminator pumps are warranted against defects in materials and workmanship for 2 years. All JB products are guaranteed when used in accordance with our directions and recommendations, and we limit this warranty to the repair, replacement, or credit at invoice price (our option) of products which in our opinion are defective due to defects in workmanship and/or materials. In no case will we allow charges for labor, expense or consequential damage. Repairs performed on items out of warranty will be invoiced on a nominal basis. Contact you wholesaler for details.

Should you need further assistance, write our Home Office or contact your nearest JB Service Center.
