FDC STORZ Type

Originally designed as a “quick-connection” system for large diameter hose, each STORZ type inlet features two or three “lugs” depending on connection size. STORZ connections are genderless and standardized. Any two STORZ type connections can be mated of the same diameter connection. Can be assembled or disassembled quickly with simple engagement of the lugs and approximately on quarter turn. Hose ends on Fire Service hoses have an integrated “lever type lock” to keep connection from disconnecting on hose

Anaerobic Pipe Sealant

This sealant uses anaerobic technology to prevent leaks in sprinkler system fabrication and improves installation in the field. Unlike traditional pipe dope, this sealant cures to a plastic seal initiated by the presence of metal and the absence of air.

- Will allow disassembly with normal tools.
- Easy to clean excess from equipment and hands with soap and water.
- 100% leak-free seal.
- Eliminates repair costs due to call-backs.
- Available in 250 mL, 750 mL, 1 Qt., 7 L
- Seals cut and misthreaded fittings.
- Will not dry out when container is left open.
- Will not thin in summer or thicken in winter.
- Replaces pipe dope and sealing tapes.
- UL Listed.

- BRASS SPRINKLER EXTENSION WARNING -

THIS PRODUCT IS SOLD AS IS AND WITH ALL FAULTS. PROPER INSTALLATION IS REQUIRED TO AVOID RISK OF FAILURE. WE MAKE NO WARRANTY OF ANY KIND FOR THIS PRODUCT. USE THIS PRODUCT AT YOUR OWN RISK. WE WILL NOT PROVIDE FOR REPLACEMENT OF THIS PRODUCT NOR WILL WE BE RESPONSIBLE FOR ANY DIRECT OR CONSEQUENTIAL DAMAGES ASSOCIATED WITH THE USE OF THIS PRODUCT.

This product should only be used when no other installation option is available and then only installed under controlled and supervised conditions.

The following disclosure should be considered when determining whether you should use brass sprinkler extensions as identified in our full product catalog. The product is manufactured in 1/2" IPS and 3/4" IPS sizes in "take out" lengths of 1/2", 3/4", 1", 1-1/2", and 2".

This product has neither been tested nor approved by any agency or authority as being a universally accepted product for the extension of sprinklers. The shortness of both the male and females threads of the brass sprinkler extensions require ideal installation conditions to be assured of successful use. Proper installation requires the proper use of tools and an adequate amount of thread sealant as well as mating the extensions with properly threaded components such as the sprinkler and the reducer to which the extension may be installed. Great care must be taken not to over tighten the sprinkler/extension/reducer assembly. Over-tightening will cause failure of the brass sprinkler extensions in almost every case. Evidence of failure may not be visible by visual inspection. The absence of apparent leaks during hydro-testing may not reveal product failure.

By installing this product you acknowledge that you have read this warning and disclosure and that you understand the statements contained herein and furthermore accept responsibility for use of this product.
