**BEFORE OPERATING OR PERFORMING MAINTENANCE, SEE
OWNER'S MANUAL AND UPC 636-3 SERVICE BULLETIN PROVIDED WITH EACH UNIT**

UPC AIR MOTOR PREVENTIVE MAINTENANCE

NOTE 1

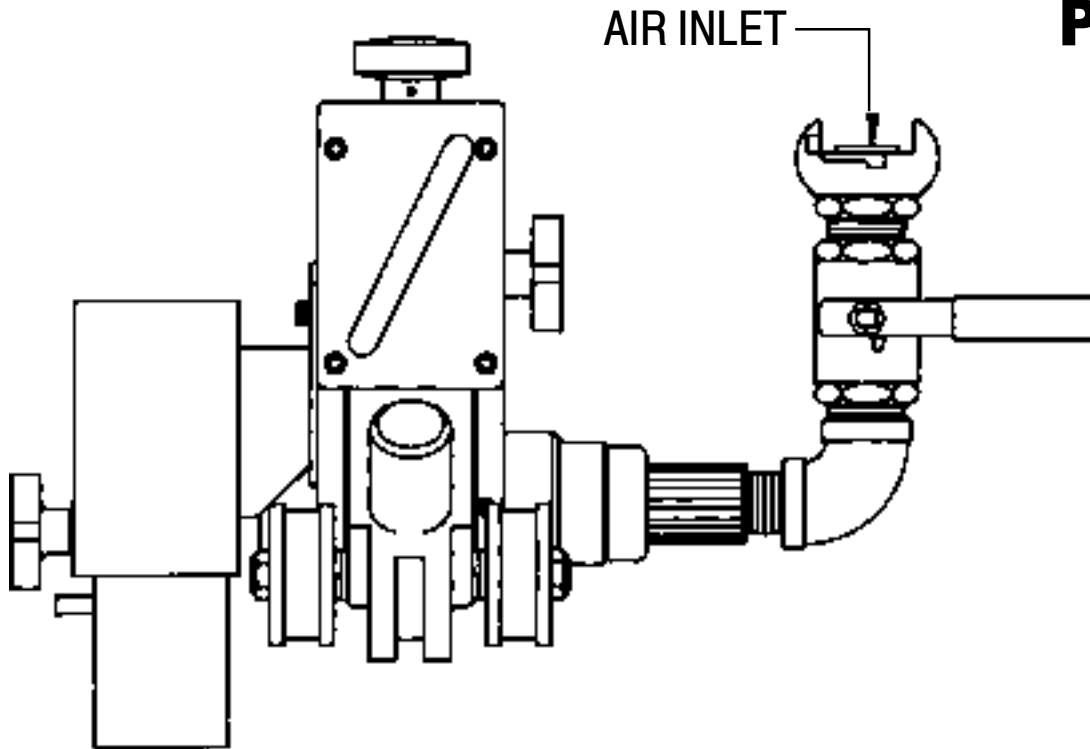

USE THE SPECIFICALLY TAILORED FILTER-REGULATOR-LUBRICATOR. (REED #97584)
All air motors are sensitive to contamination and require clean air and proper lubrication. Be certain the filter is not clogged and the lubricator is delivering 3 to 6 drops per minute.

NOTE 2

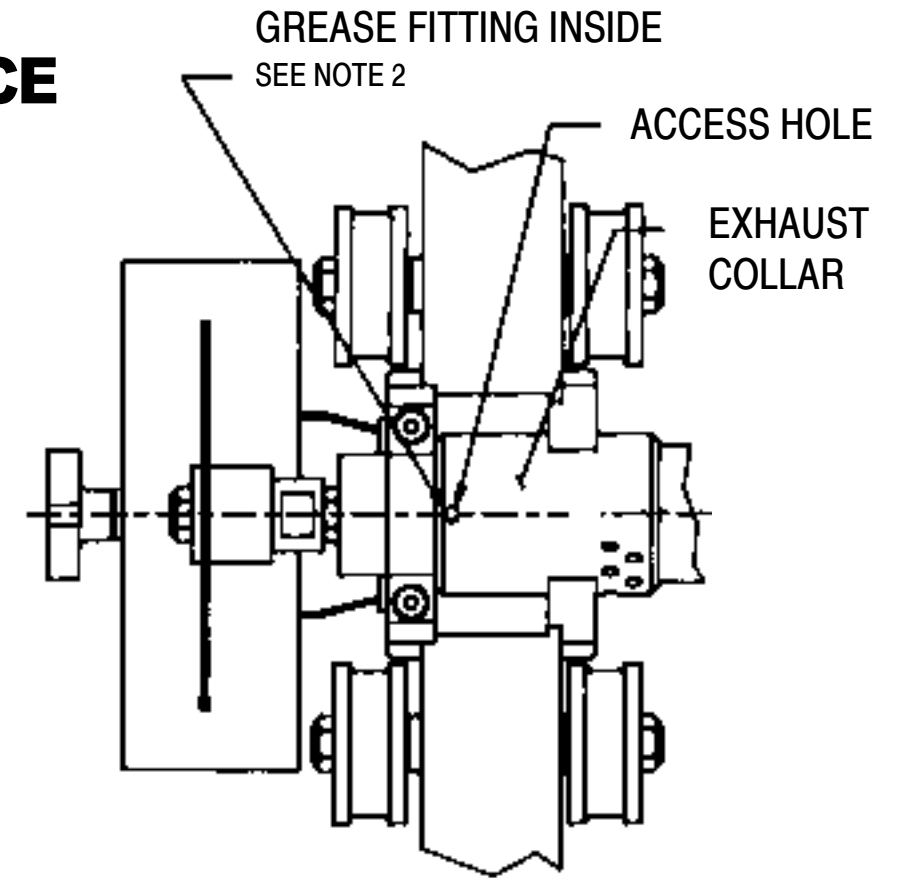

OBSERVE THE LUBRICATION INSTRUCTIONS
Lightly grease gearing after day's use. Turn the unit over, rotate the exhaust collar to align the 1/4" hole on the centerline, then access the grease fitting inside the 1/4" hole.. Also pour a teaspoon of Non Fluid Oil* air lube in the air inlet before each new air hookup and after each day's use. *Non Fluid Oil Corp. (Reed #97583)

NOTE 3

READ THE COMPLETE OWNER'S MANUAL AND SERVICE BULLETINS PROVIDED WITH EACH UNIT BEFORE OPERATING.
