Control panel and knobs

Be sure all controls are off and all surfaces are cool before cleaning any part of the range.

If your range is removed for cleaning, servicing or any reason, be sure the anti-tip device is reengaged properly when the range is replaced. Failure to take this precaution could result in tipping of the range and can result in death or serious burns to children or adults.

Clean up spatters with a damp cloth. Remove heavier soil with warm, soapy water.

Do not use abrasives of any kind on the control panel or knobs.

The control knobs may be removed for easier cleaning. To remove a knob, pull it straight off the control panel. Wash the knobs in hot soapy water, but do not soak.

NOTE: The Mini-Knob is not removable.

NOTE: For 30" ranges, ZGP304N and ZGP304L, place the knob with X-HI setting on the right-front side.

Oven The bake and convection elements are not Do not attempt to clean the broil elements. Any soil will burn off when the burner is heated. exposed. burners Broiler pan, The broiler pan, grid and roasting rack are Roasting Rack all dishwasher safe. However, baked on grid and foods may require washing by hand with a roasting rack commercial oven cleaner or abrasive detergent. Do not store a soiled broiler pan or grid anywhere in the oven. Always properly Grid dispose of excess grease.

**ACAUTION** 

Do not clean the broiler pan, grid or roasting rack in a self-cleaning oven.

#### Professional Dual Fuel Range

# Oven racks The racks may remain in the oven during the self-cleaning cycle without being damaged.

Periodically, after several self-clean cycles, the oven racks may need to be lubricated using the Graphite Lubrication shipped with your range. To order additional Graphite Lubrication, call our National Parts Center at 800.626.2002 and reference WB02T10303.

- 1. Remove rack from the oven. See the Full extension oven racks section.
- Fully extend the rack on a table or countertop. Newspaper may be placed underneath the rack for easy cleanup.

 If there is debris in the slide tracks, wipe it away using a paper towel. NOTE: Any graphite lubricant wiped away must be replaced.

4. Shake the graphite lubricant before opening it. Starting with left slide mechanism of the rack, place four (4) small drops of lubricant on the two (2) bottom tracks of the slide close to the bearing carriers.

5. Repeat for the right slide mechanism of the rack.

- 6. Open and close the rack several times to distribute the lubricant.
- 7. Replace the cap on the lubricant and shake it again. Turn the rack over and repeat steps 3, 4, 5 and 6.
- 8. Close the rack, turn rack right-side-up and place in the oven. See the Full extension oven racks section.
- 9. Repeat above steps for each rack.

**NOTE:** Do not use a cooking spray or other lubricant sprays on the slides.

#### Professional Dual Fuel Range

The door is very heavy. Be careful when removing and lifting the door. Do not lift the door by the handle.

#### To remove the door:

- 1. Fully open the door.
- 2. Pull the hinge locks down toward the door frame, to the unlocked position. A tool, such as a small flat-blade screwdriver, may be required.
- 3. Firmly grasp both sides of the door at the top.
- 4. Close door to the door removal position, (approximately 15 degrees from closed) and lift it up and out until the hinge arm is clear of the slot.

#### To replace the door:

- 1. Firmly grasp both sides of the door at the top.
- 2. With the door at the same angle as the removal position, seat the indentation of the hinge arm into the bottom edge of the hinge slot. The notch in the hinge arm must be fully seated into the bottom of the slot.
- 3. Fully open the door. If the door will not fully open, the indentation is not seated correctly in the bottom edge of the slot.
- 4. Push the hinge locks up against the front frame of the oven cavity, to the locked position.
- 5. Close the oven door.

Pull hinge locks down to unlock

### Probe

l ift-off

oven door

Allow the temperature probe to cool before cleaning.

The probe should be cleaned with soap and water by hand.

Do not immerse the temperature probe in water.

Do not store the temperature probe in the oven.

Do not clean the temperature probe in the selfcleaning oven.

# Oven lights

### SHOCK OR BURN HAZARD:

Before replacing oven light bulb, disconnect the electrical power to the range at the main fuse or circuit breaker panel. Failure to do so may result in electric shock or burn.

# **A**CAUTION

**BURN HAZARD:** The glass cover and bulb should be removed when cool. Touching hot glass with bare hands or a damp cloth can cause burns.

Each oven is equipped with halogen light columns located on the side walls of the oven. The lights come on when the door is opened or when the oven is in a cooking cycle.

Each light assembly consists of a removable light cover with two locking clips and a light compartment with three halogen bulbs.

Be sure to let the light cover and bulb cool completely. For your safety, do not touch a hot bulb with bare hands or a damp cloth.

### To remove:

- 1. Remove the racks from the oven. See the Full extension oven racks section.
- 2. Using a 7/16" nutdriver, remove the four nuts holding the rack supports to the oven wall.

3. Remove the glass light cover by pulling its back edge out and rolling it toward you. Do not remove any screws.

4. Using gloves or a dry cloth, remove the burned-out light bulb by pulling it straight out.

#### To replace:

Use a new 120-volt Halogen bulb, with G8 pins, not to exceed 25 watts.

Replacement bulbs may be purchased by calling 800.626.2002. Order Part Number WB25T10064.

**NOTE:** Higher wattage bulbs will damage your oven.

Using gloves or a dry cloth, remove the bulb from its packaging. **Do not touch the bulb with bare fingers.** Oil from bare fingers may cause hot spots on the glass surface and lead to premature failure of the bulb. If you do touch the glass, clean it with alcohol prior to installation.

1. Push the bulb straight into the receptacle all the way.

2. Replace the light cover, by placing its front edge under the front two tabs in the light compartment. Roll the back edge into place, making sure that it is firmly seated.

**NOTE:** If the locking clips fell from the glass lens cover, hold them on the cover, in the correct position, while replacing the cover on the light compartment.

# The light cover must be in place when using the oven.

3. Reinstall the rack support. Be sure to orient the support so that the top tabs for the nuts are closest to the top of the oven. Lightly secure with the four nuts removed earlier, but do not over-tighten or the enamel could be chipped.

- 4. Replace the racks. See the Full extension oven racks section.
- 5. Reconnect electrical power to the oven.

Professional Dual Fuel Range

To clean the door	The oven frame and door, outside the oven seals, should be cleaned by hand. Enameled surfaces should be cleaned with hot soapy water. See Stainless Steel Surfaces section for all Stainless Steel areas.	Do not rub or clean the door seal—the fiberglass material of the seal has an extremely low resistance to abrasion. An intact and well-fitting oven seal is essential for energy-efficient operation and good baking results. If the seal becomes worn, frayed, damaged or displaced it must be replaced by a qualified technician.
- Stainless steel surfaces	Do not use a steel-wool pad; it will permanently scratch the surface. To clean the stainless steel surface, use warm sudsy water or a stainless steel cleaner. Always wipe the surface in the direction of the grain. Follow the cleaner instructions for cleaning the stainless steel surface.	To inquire about purchasing stainless steel appliance cleaner, please call our toll-free number, 800.626.2002 or visit monogram.com.
- Oven bottom	The oven bottom has a porcelain enamel finish. To make cleaning easier, protect the oven bottom from excessive spillovers. A smaller sheet of foil or sheet tray may be used to catch a spillover by placing it on the rack below the rack you are cooking on. This is particularly important when baking a fruit pie or other foods that are highly acidic. Hot fruit fillings or other foods that are highly acidic (such as tomatoes, sauerkraut and sauces with vinegar or lemon juice) may cause pitting and damage to the porcelain enamel surface and should be wiped up immediately.	Never fully cover a rack with aluminum foil. This will disturb the heat circulation and result in poor baking. To clean up spillovers, use soap and water, an abrasive cleaner or soap-filled scouring pad. Rinse well to remove soap before self-cleaning.

# Dual-flame stacked burners

The burner consists of three parts: the burner base, burner head, and burner cap. The burner head and burner cap can be lifted off, making them easy to clean.

## 

BURNER WITHOUT ALL BURNER PARTS IN PLACE.

Surface burners should be cleaned routinely, especially after bad spillovers, which could clog the slots and holes in the burner heads.

The electrode is located at the rear of each burner. Do not attempt to disassemble or clean around any burner while another burner is on. An electric shock may result.

#### To remove the burner parts:

- 1. Turn all controls **OFF** before removing any burner parts.
- 2. When cool, you may lift off the burner grates, burner caps and burner heads for easier cleaning. **Do not remove the burner bases.**

#### Cleaning

Lift off burner parts only when cool. Wash in hot, soapy water. You may use a plastic scouring pad to remove burned-on food particles.

To remove burned-on food, soak the burner heads in a solution of mild liquid detergent and hot water for 20–30 minutes. For more stubborn stains, use a plastic scouring pad or toothbrush.

If the spill goes inside the burner head assembly, wash it under running water and shake to remove excess water.

#### After Cleaning

Before replacing the burner parts, shake out excess water and then dry them thoroughly.

#### To replace the burner parts:

Make sure that the burner parts are replaced in the correct location.

- 1. Replace the burner head on top of the burner base, making sure that the hole in the burner head is properly aligned with the electrode in the burner base. A small gap between the base and head is normal.
- 2. Place the burner cap on top of the burner head. Make sure that the burner cap is properly seated on the burner head.

Burner cap not properly seated

#### Professional Dual Fuel Range

# Spark igniter and electrodes

Burner

grates

The electrode of the electronic ignition system is positioned at the rear of the burner base. When cleaning the cooktop, be careful not to snag the igniter with your cleaning cloth. Damage to the igniter could occur.

Be careful not to push in a control knob while cleaning. It could cause the igniter to spark.

Make sure that the white ceramic igniters on the cooktop are dry and clean. Clean the metal portion of the electrode with a soft cloth or emery board.

# Do not attempt to remove the electrode from the cooktop.

The enameled cast-iron burner grates should be cleaned regularly.

You must put the grates on the self-clean oven rack during the self-clean cycle. DO NOT put the grate on the oven floor during a self-clean cycle. DO NOT put the frame inside the oven during a self-clean cycle. Only the grate can withstand the heat of the self-clean cycle. The frames may be cleaned by hand or in the dishwasher.

Wash them in hot soapy water, rinse, and dry thoroughly.

Although they are durable, the grates will gradually lose their shine, regardless of the best care you can give them. This is due to their continual exposure to high temperatures.

Do not operate a burner for an extended period of time without cookware on the grate. The finish on the grate may chip without cookware to absorb the heat.

For stability, the frames have rubber pads on each corner. During cleaning and use, be careful not to damage or snag rubber pads.

Professional Dual Fuel Range

Grease troughs

#### troughs at the front of the range. Once the troughs (on some models) have cooled, they may be lifted out for easier cleaning. To remove the cool grease trough from the griddle, slide it toward the front and lift up. To remove the cool grease trough from the grill, lift the grill frame and lift out the trough. Do not allow grease to accumulate in the grease troughs as it can be a fire hazard. Clean the grease troughs as soon as they are cool. The grease troughs can be cleaned by hand with hot soapy water or in the dishwasher. Wipe any spillage in the trough basin with a soft cloth. For stability, the troughs have rubber pads at the front. Be careful not to damage the pads when removing for cleaning. Thoroughly clean the griddle of grease and NOTE: It is normal for the stainless steel griddle Griddle food particles, using a square-edged metal to discolor to a yellow-brown color after use. (on some models) spatula, while it is still hot. Wipe the griddle with a dry, heavy, coarse cloth to remove any remaining residue and food particles. If the griddle is cleaned with anything other than a dry, heavy, coarse cloth, it will need to be reseasoned. Never flood the hot griddle with cold water. This could cause the griddle to crack or warp. Cutting Wash the bamboo cutting board with warm water and a mild soap. Occasionally, wipe it board with mineral oil. (on some models)

Grease from the griddle and the grill will drain

into the enameled cast-iron grease troughs

Do not clean the cutting board in the dishwasher.

Grease

Grill grate, frame and baffle (on some models) The IR Grill should be cleaned immediately after each use.

#### 1. Clean the Grill Grate:

Turn the burner to OFF. Use a barbecue mitt to remove the hot grill grate. Place the grill grate in a basin or sink and scrub with a brass bristle brush. Rinse frequently.

The grill grate may also be cleaned in the oven during the self-cleaning cycle, or, it can be cleaned in the dishwasher.

#### 2. Clean the Grill Grate Frame:

The grill grate frame can be cleaned by hand or in the dishwasher. Do not clean the grill grate frame in a self-cleaning oven. The grill grate frame has rubber pads on each bottom corner. Be careful not to damage the pads during the cleaning process.

#### 3. Clean the Radiant baffle:

Lift the baffle out of the pan. Clean the baffle with hot soapy water or in the dishwasher.

#### 4. Clean the Pan Surround, Wire Mesh:

The pan surround and wire mesh cannot be removed. Clean them in place. Use a soft damp cloth to clean the pan surround. Gently brush food particles into the grease trough or use a vacuum cleaner for excess debris.

**IMPORTANT:** Keep the grill burner and ceramic igniter dry. Do not spray water or cleaner directly onto the wire mesh or igniter. Avoid contact with the igniter, it is fragile and can chip or break.

#### Reassemble the Grill:

Reverse the steps above to reassemble the grill. The radiant baffle support tabs should engage the pins on the side of the pan surround. Replace the grate frame. Be sure to engage the bottom locater pin with the pin hole at the left rear side of the pan. Replace the grill grate with the handle end towards the front of the range.
