## FILL VALVES

The fill valve refills the tank and bowl to the correct water levels after the flush. The fill valve is the engine that drives toilet flush performance. It replaces the ballcock and is more efficient and easy to install. From the easy, adjustable 400A to the water-saving Leak Sentry® 400LSR to our quietest and most powerful 400ARHR PerforMAX®, Fluidmaster has the right fill valve for your needs. Replace an old style ballcock or other fill valve with a better performing Fluidmaster fill valve today.

## FLUSH VALVES

Flush components control the release of the water from the tank into the toilet bowl once the tank lever handle has been pressed. Fluidmaster has a complete line of highly efficient flush valves to accommodate your needs. Fluidmaster flush valves are easy to install, save water and will stop leaks at the drain. Retrofit any toilet with the water-saving Duo Flush™ replacement valve and save up to 45% of the normally used water.

**Fill Valve 400A**  
The fill valve fills the toilet tank and bowl with water from the water supply line after the tank has been emptied by a flush.

**Flush Valve 507A**  
The flush valve controls the water within the tank and the flapper actuates the flushing action.

**Duo Flush™ 550DFR**  
The Fluidmaster Duo Flush™ saves more water than any other dual flush system on the market.

**PerforMAX® High Performance Fill Valve 400ARHR**  
The quietest and most powerful fill valve on the market.
