Commonly used are the following grades of heat-treated alloy steel for high pressure or extreme temperature service in diameters of 1/2" to 2", inclusive. Other grades and other diameters are available on special order.

ASTM A354, Grades BC and BD– heat-treated alloy steels for applications at normal atmospheric temperatures where high strength is required.

ASTM A193, Grade B7– a heat-treated chromium-molybdenum steel widely used for medium high temperature service.

ASTM A193, Grade B16– a heat-treated chromium molybdenum-vanadium steel for high-pressure, high-temperature service.

ASTM A320, Grade L7– This grade is intended for low-temperature service down to minus 150°F and has a minimum Charpy impact value of 15 ft-lb at this temperature. Sizes 2 1/2" and under.

ASTM A320, Grade L43– The same properties offered by Grade L7 in sizes up to 2 1/2" are obtainable up to 4" in Grade L43.

Heat-treated alloy steel bolts and threaded bars are also available from Bethlehem in the grades listed above-bolts in diameters of 3/8" to 1 1/4", inclusive; bars in diameters of 1/2" to 2", inclusive.
These are available only on special order.

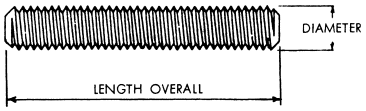
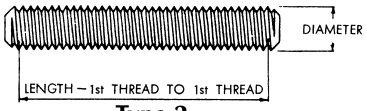
TYPES OF STUDS

CONTINUOUS THREAD STUDS



Type 1



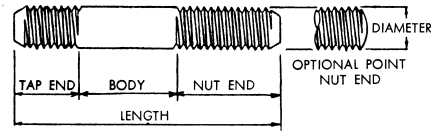
Type 2

Continuous-thread studs are threaded from end to end and are often used for flange bolting with two nuts applied.

Type 1–General purpose. The length of this type is measured from end to end. Threads are UNRC-2A.

Type 2–Studs for temperature-pressure piping. These studs are made to the dimensional standard requirements of ANS B16.5 and have a length measurement requirement different from all other studs, i.e., the length is measured from first thread to first thread, exclusive of points. Points are flat and chamfered. Threads are UNRC-2A for all sizes 1" and under and 8UNR-2A for all sizes over 1".

TAP-END STUDS



Tap-end studs have a short thread on one end called the tap end which is threaded to a Class NC5 or Class UNRC-3A fit. This end is for screwing into a tapped hole. The other or nut end is threaded with a Class UNRC-2A fit. Length of the stud is measured overall. The tap end has a chamfered point, but the nut end may have either a chamfered or round point, at the manufacturer's option. Tap-end studs are available in four types, as follows:

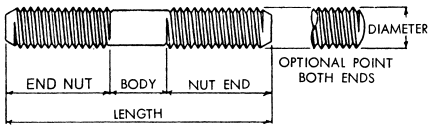
Type 1–Unfinished, have a full diameter but no standard body tolerances.

Type 2–Finished, having either an undersize body with rolled threads or a full-size body with cut threads, at the manufacturer's option. The body portion will be finished to a minimum Class 2A pitch diameter or maximum basic major diameter of the nut-end thread.

Type 3–Finished full-body, having tolerances equal to that on major diameter of Class 2A threads.

Type 4–Finished close-body, milled or ground to tolerances specified by the user.

DOUBLE-END STUDS



Double-end studs have equal-length threads on each end to accommodate a nut and are threaded to a Class 2A fit. Length of stud is measured overall. Both ends have chamfered points, but round points may be furnished on either or both ends at the manufacturer's option. This style is furnished in the same four types listed for tap-end studs. Double-end studs are used for flange bolting or other applications where torquing from both ends is necessary or desirable.

Most steel grades not heat treated or quenched and tempered can be furnished on special order for production quantities. Only the Type 2 continuous thread studs made to specification ASTM A193 grade B7 are stocked in a full range of sizes.

CARRIAGE BOLTS
ASTM A307
Grade A

Carriage bolts with UNRC-2A threads can be furnished in two different styles: square-neck carriage bolts in diameters from 1/4" to 3/4", inclusive and short square-neck carriage bolts in diameters from 1/4" to 5/8" inclusive.

Dimensional data for both styles are shown below.

MINIMUM THREAD LENGTH

The formula for determining thread length is, Bolts 6" and shorter, 2 diameters plus 1/4". Bolts over 6" 2 diameters plus 1/2". If bolts are too short to apply the formula, the thread will be extended as close to head as possible.

ISO METRIC AND UNIFIED SCREW THREAD DESIGNATIONS

ISO metric screw threads are designated by basic diameter and thread pitch. As an example, M8 × 1 is a standard ISO Metric screw thread having a basic diameter of 8 millimeters and a thread pitch of 1 millimeter. To convert on ISO Metric screw thread designation to a Unified (American) designation divide the basic diameter by 25.4 and multiply the reciprocal of the pitch by 25.4 to determine nominal size in inches and threads per inch. By so doing, M8 × 1 becomes 0.315-25.4 UNS.

Unified screw threads are designated by nominal size and number of threads per inch. As an example, 3/4-10 UNC is a standard Unified screw thread having a nominal size of 3/4 inches and 10 threads per inch. To convert a Unified screw thread designation to an ISO Metric screw thread designation multiply nominal size by 25.4 and multiply the reciprocal of threads per inch by 25.4 to determine basic diameter in millimeters and pitch in millimeters. By so doing, 3/4-10 UNC converted to ISO Metric become M19.05 × 2.54.
