## CREATION OF AN INDUSTRY

In the mid 1940s, Cullen Crawford developed and patented the original flareless fitting (nut and double ferrule system), making it easier and more efficient to make tubing connections. Based on this innovation, he founded the Crawford Fitting Company, creating an industry for compression fittings.

At Tylok, our mission is total customer satisfaction with both products and services. Our knowledgeable staff is readily available to answer questions and respond in a timely manner. We continue to develop new products that expand the Tylok brand. If you have a unique product need, Tylok would like to be your engineered-solutions provider.

## INTRODUCTION

CBC-Lok® tube fittings are fully interchangeable with Swagelok® and Parker A-Lok®. Although it is always recommended to use all CBC-Lok® components, intermixing CBC-Lok® bodies and/or component parts with that of other manufacturers will not adversely affect sealing ability. CBC-Lok® Tube Fittings are made to strict quality control standards. CBC-Lok® Tube Fittings are proudly made in the U.S.A.

CS-Lok® tube fittings are fully interchangeable with Parker CPI™. Although it is always recommended to use all CS-Lok® components, intermixing CS-Lok® bodies and/or component parts with those of other manufacturers will not adversely affect sealing ability. CS-Lok® Tube Fittings are made to strict quality control standards and cannot guarantee that of other manufacturers. CS-Lok® Tube Fittings are proudly made in the U.S.A.

## OPERATION

CBC-Lok® Tube Fittings are comprised of four components: Body, Front Ferrule (Collet), Rear Ferrule (Collet) and Nut. A leak-proof seal is obtained through proper ferrule action as the ferrules are tightened onto the tubing via axial thrust provided by the nut. The front ferrule provides the leak-proof seal, when the nut and ferrules are properly drawn up the specified number of turns. The rear ferrule grips the tubing preventing pull-off. The stainless steel nuts are silver plated and a dry film lubricant is applied, reducing torque and ensuring proper sealing.

CS-Lok® Tube Fittings are comprised of three components: Body, Single Ferrule (Collet) and Nut. A leak-proof seal is obtained through proper ferrule action as the ferrule is tightened onto the tubing via axial thrust provided by the nut. The ferrule provides the leak-proof seal, when the nut and ferrule are properly drawn up the specified number of turns. The stainless steel nuts have a molybdenum disulfide coating, reducing torque and ensuring proper sealing.

## TY-COR™ PROCESS

Ty-Cor™ refers to the treatment that diffuses carbon into the surface of the stainless steel, thereby increasing the surface hardness without affecting the quality of the metal treated. In fact, when AISI 316 stainless steel is treated, the corrosion resistance is equal to or better than non-treated 316 stainless steel. The increase in corrosion resistance to pitting and stress corrosion is very pronounced in media that contain chlorides (e.g., sea water, bleach, HCl, etc.). The Ty-Cor™ process applied to the rear ferrule also helps eliminate galling and ensures proper sealing on tube end make ups.

## FEATURES

### CBC-Lok® Tube Fittings

- Double ferrule swaging action
- Total component interchangeability
- Heat Code traceable
- ASTM material construction

### CS-Lok® Tube Fittings

- Single ferrule swaging action
- Total component interchangeability
- More tolerant of vibrations
- Heat Code traceable
- ASTM material construction

The quality system complies with the international standard ISO 9001. Tylok strives to continuously improve the effectiveness of the Quality Management System by each member within the organization.

Tylok has received the Certificate of Type Approval from the American Bureau of Shipping (ABS). The following Part Families are ABS approved: DFC – Female Connector, DMC – Male Connector, DU – Union, DELU – Elbow Union, DME – Male Elbow and DTTT – Union Tee.

# HOW TO ORDER

CBC/CS LOK® Tube Fittings

CBC-Lok®/CS-Lok® Tube Fittings are ordered as listed in this catalog by inserting the material code before the part number. CBC-Lok®/CS-Lok® Tube Fittings can be identified through the part number as to material, tube size, configuration and thread connection. The part number describes a complete fitting assembly.

The size nomenclature to describe a tee fitting is from left (1) to right (2) and down (3).

**Special Configurations available upon request.**

Example: A Stainless Steel Female Run Tee, 3/8" Tube Size to 1/4" Female Pipe to 3/8" Tube is designated as follows.

# MOUNTING DIMENSIONS

for ORS/ORT Fittings

## RAISED SURFACE

Minimum diameter is larger than the O-ring sealing diameter to prevent O-ring extrusion.

## RECESSED HOLE (SHOULDER CLEARANCE)

Minimum diameter allows clearance for round shoulder of fitting into recess.

## RECESSED HOLE (HEX CLEARANCE)

Minimum diameter allows clearance for hex of fitting into recess.

## COMPONENT REPLACEMENT PARTS

Collet sets and Nut/Collet sets make for easy storage and handling of nuts and collets. CBC-Lok® and CS-Lok® component parts are precision made and should be handled with care. The components can be ordered on an arbor, which aids in careful handling and prevents them from coming off. Pinch the end of the arbor to release the components.

- Tylok Mud Daubers, also known as Vent Protector fittings, protect open ends of tubing, instruments, outlet vents and exhaust lines.
- Each Vent Protector has a 300 series stainless steel 40-mesh wire screen to prevent obstructive foreign objects, such as insects, from entering and clogging a system.
- Straight Vent Protectors are available in either Stainless Steel or Brass. Add an SS or B in front of part number to specify the desired material.
- Angled Vent Protectors are available in Polypropylene (PP) only.

### TERMOCOUPLE BORE THROUGH

A Thermocouple Connector can be furnished already bored through for an additional charge.

**When ordering:**

1. Select required size male connector. See DMC/SMC pages for a listing of available Male Connectors.
2. Add the letters "BT" to designate bore through. Example: 4-DMC-2-BT

SIZE	DE-RATING FACTOR
Up to 1/2" (Size 8)	0.75
1/2"-3/4" (Size 8 thru 12)	0.50
7/8" - 1" (Size 14 and 16)	0.25

NOTE: Multiply tube pressure rating (see Suggested Allowable Working Pressure tables) by de-rating factor to determine safe working pressure.

### TYLUBE™ THREAD LUBRICANT

Tylube™ is an anti-gall compound to be used on stainless steel, steel and nickel-based alloys. Temperature range to 500° F. Not recommended for plastic and aluminum products.

Tylube™ is made from distilled water with inert ingredients and contains no silicones, heavy metals, chlorine or sulfur. Safe for oxygen applications.

For a complete list of ingredients, request an MSDS to be sure of its compatibility with your installation. Available in 8 oz. plastic bottles.

## CBC-LOK®/CS-LOK® INSTALLATION INSTRUCTIONS

CBC-Lok®/CS-Lok® Tube Fittings come completely assembled and ready for use, no disassembly required. Although there are some general guide lines to follow, no special preparation of the tubing is necessary. In overhead applications, Tylok recommends using a Pre-Set Tool.

SIZE		TIGHTEN # TURN(S)		
1	1/16"	3/4		Size #1 thru #3 Finger tight plus 3/4 turn
2	1/8"			
3	3/16"			
4	1/4"	1-1/4		Size #4 thru #16 Finger tight plus 1-1/4 turn
5	5/16"			
6	3/8"			
8	1/2"			
10	5/8"			
12	3/4"			
14	7/8"			
16	1"			

NOTE: DF Plugs, -NF (Nut & Ferrule Pre-Assembles) require only 1/4 turn make-up.

Simply insert the tubing into the assembly, making sure the tubing seats firmly against the shoulder of the body and the nut is finger tight. **High pressure applications and high safety-factor systems:** Further tighten the nut until the tube will not turn by hand or move axially in the fitting.

Tighten nut with wrench the additional number of turns indicated above, while holding the fitting body with a second wrench.

## TO REMOVE TUBE AND RE-CONNECT TUBE FITTING

Mark the location of the nut with reference to the body before disassembly. For reassembly, re-insert the tubing into the body until it is seated. With proper size wrench, retighten nut to original location by realigning previous marks. A noticeable amount of torque will develop when the nut is turned to original position. Next, rotate the nut slightly past original position to fully re-set the seal.

Mark the location of the nut with reference to the body.

Back off the nut until it is clear of the body and remove the tubing from the fitting.

## CBC-LOK® TUBING SELECTION & PREPARATION

Proper selection of tubing is key to the performance of the fitting. When selecting the proper wall thickness and material, all tubing should be compatible with the process fluid, temperature, application, flow and system pressure.

For proper sealing it is recommended that the tubing and fitting be of like material to allow for positive sealing (i.e., stainless on stainless, brass on copper, steel on steel). Galvanic corrosion could occur if the tubing and fitting are not of like material, with the exception of a brass fitting on copper tubing.

When using stainless steel tubing, Tylok recommends using Type 304 or 316 fully annealed, seamless or welded redrawn meeting ASTM A213, ASTM A269 or equivalent, with a suggested maximum hardness of 80 Rb.

For copper tubing, Tylok suggests using soft annealed, seamless tubing per ASTM B75 or equivalent. Copper water tube type K or L, soft annealed (Temper O) per ASTM B88 can also be used.

When using carbon steel, all tubing should be fully annealed and conform to ASTM A-179, or equivalent, with a maximum hardness of 72 Rb.

In general, all tubing should be free of nicks, scratches, or imperfections of any kind and should be suitable for bending. Out of round tubing that does not easily go through fitting components should not be used. It is recommended that the charts be used for tube selection. Ideally, the tube end should be cut square so that when it bottoms out inside the fitting, an extra seal is provided. Avoid installing contaminated tubing into your system. For elevated temperatures, see Tube Pressure Derating Factors at Elevated Temperatures Chart.

CBC-Lok®/CS-Lok® Tube Fittings swage the tubing to achieve sealing. Thin wall tubing (wall thicknesses with working pressures highlighted in reverse text in the charts) is not recommended for Gas Service. See "Gas Service" on page 54.

When using tubing of a thinner or thicker wall than shown, it is always recommended that you consult with your local Distributor or contact Tylok International directly if there is any doubt selecting tubing.

It is the responsibility of the Engineer to refer to the technical pages in this catalog to ensure selection of the proper tubing material, tubing compatibility with the fitting, media and tubing wall thickness.

**Values in reverse text are not recommended for Gas Service.**

*Note: Tables, calculated to the right, are suggested maximum working pressure ratings, in accordance with ASME B31.3, but should be used for reference only. Tylok International, Inc., is not responsible for its accuracy nor designs using these figures.*

Following the stated recommendations will result in a safe application, free of leaks. The entire system must be considered when selecting the tube. Tylok tube fittings are designed to work to the tubing pressure ratings found in the charts below.

### GAS SERVICE

Extra care must be taken when tubing is used in gas service applications. Small gas molecules easily escape through minute leak paths; therefore, the tubing must be free of nicks, scratches and imperfections of any kind. When using large diameter tubing, the possibility of surface defects is increased further due to greater surface area. It is strongly recommended that the heavier wall thicknesses be selected. Penetration of the ferrules on thin wall tubing or soft material may not offer enough radial resistance for sealing.

**Values in reverse text are not recommended for Gas Service.**

### GAP GAGE

Gap Gages can be purchased to ensure the Installer and Inspector that the nut has been properly tightened.

When fitting is properly tightened, gap gage should not fit between nut and shoulder of body.

### PRECAUTIONS FOR WELD END

CBC-Lok®/CS-Lok® Tube Fittings with weld ends offer the same positive sealing as all other Tylok fittings. Welding could deform the assembly, making pull ups or disassembly difficult. Some precautions should be taken:

- Remove the nut and ferrules from the fitting
- It is important that the fitting threads and sealing surfaces be protected from weld splatter
- A heat sink should be used to dissipate heat
- Ensure alignment by tack welding symmetrically
- Once welded, remove the weld splatter protection and reassemble nut and ferrules on fitting

### SAFETY GUIDELINES

- Never connect, disconnect or remake a fitting with pressure in the system
- Make sure all fittings are properly installed, reference Installation Instructions - page 52, before pressurizing the system
- Tubing material should be softer than fitting material
- Tylok recommends using only Tylok replacement parts
- Although the fittings will hold to the pressure rating of the tubing, it is not recommended to go beyond this rating. Elongation could occur in the tubing, shrinking the wall thickness and causing potential harm to anyone in the area
- Always use proper thread lubricants and sealants on tapered pipe threads
- If process fluids are toxic and/or hazardous, exercise extra caution
- Never bleed a system by loosening a fitting
- For proper sealing it is recommended that the tubing and fitting be of like material

### QUALITY CONTROL

All components are manufactured and inspected to meet strict quality control standards in each phase of production. All employees are thoroughly trained to follow procedures, in accordance with the ISO 9001:2008 Quality Standard, to ensure a quality product from the start of each job through completion.

## PIPE THREAD SPECIFICATIONS

Tylok Pipe Fittings are manufactured from materials meeting applicable ASTM or ASME specifications, with pipe threads which meet or exceed ANSI B1.20.1 requirements. Strict quality control procedures are followed throughout production to provide the finest possible product.

**Materials: • Brass • 316 Stainless Steel • Steel**

These charts are to be used as a guide only and are based on normal wall thicknesses, used for the various sizes. These ratings may vary widely from effects such as the proper use of sealants, size of stock, temperature, corrosion factors, etc. Therefore, Tylok International, Inc., assumes no responsibility for its accuracy in any Individual design.

Pressure ratings for Tylok tube fittings that have differing end connection styles shall use the lowest of the pressure ratings.

## TUBE PRESSURE DERATING FACTORS AT ELEVATED TEMPERATURES

The table lists derating factors that must be considered in applications above that of ambient temperatures.

### Example

Type 316 Stainless Steel 1/4" O.D. x .049" wall at 800°F is: 7,500 PSI x .79 = 5,925 psig.

Therefore, the suggested allowable working pressure for 316 Stainless Steel (1/4" O.D. with .049" tube wall) at 800°F is 5,925 psig.

## Suggested Maximum Operating Pressures for Pipe Threads (psig)

NPT Size	316 SS & Carbon Steel		Brass	
	Male	Female	Male	Female
1/16"	11000	5500	6700	3300
1/8"	10100	5000	6500	3200
1/4"	8000	4000	6600	3300
3/8"	7800	3900	5300	2600
1/2"	7700	3800	4900	2400
3/4"	7300	3600	4600	2300
1"	5300	2600	4400	2200

## Tylok Instrumentation Fittings are rated at the following temperatures:

316 Stainless	-325°F to 1000°F (-198°C to 648°C)
Brass	-40°F to 400°F (-40°C to 204°C)
Steel	-65°F to 375°F (-54°C to 190°C)

Consideration should be given to maximize temperature ratings if fittings and/or tubing are coated or plated.

TEMPERATURES		TUBING MATERIAL		
°F	°C	Carbon Steel	304 SS	316 SS
200	93	0.95	1.00	1.00
300	149	0.90	1.00	1.00
400	204	0.87*	0.93	0.96
500	260		0.87	0.89
600	316		0.82	0.85
700	371		0.8	0.81
800	427		0.76	0.79
900	482		0.73	0.77
1000	538		0.69	0.76

\*Based on 375°F (190°C) max

TEMPERATURES		TUBING MATERIAL
°F	°C	Copper
100	38	1.00
150	66	0.85
200	93	0.80
250	121	0.80
300	149	0.78
350	177	0.66
400	204	0.50

### HEAT TRACEABILITY

Tylok® Tube Fittings are completely heat code traceable back to the original mill heat from which they were made. Starting with the original billet, the mill creates a certificate that completely describes the chemical and physical makeup. For any one of the four components (body, front ferrule, rear ferrule, nut), the material certifications can be provided. Call Tylok and provide the heat code stamp marked on the part itself, along with the part number to obtain the certificate.

### RAW MATERIAL SPECIFICATIONS

FITTING MATERIAL	BAR STOCK	FORGING	TUBING SPECIFICATION*
Brass	ASTM B16 Alloy 360 ASTM B453 Alloy 345	ASTM B124 Alloy 377	ASTM B75 Copper (Temper O)
Stainless Steel	ASTM A276 ASME SA479 Type 316-SS	ASME SA-182 Type 316-SS	ASTM A213 ASTM A269
Steel	ASTM A108		ASTM A179

\*Reference Tubing Selection & Preparation

### TYLOK PRE-SET TOOL

The CBC-Lok®/CS-Lok® product line offers a Pre-Set Tool when fittings need to be installed in hard to reach places. The Pre-Set Tool is designed to be used in any tabletop vise. After tightening the nut the specified number of turns, as stated in the included installation instructions, loosen the nut from the Pre-Set Tool. Once the ferrules have swaged into the tubing surface, the assembly is ready for installation.

When ordering the CBC-Lok®/CS-Lok® Pre-Set Tool, reference the part number in the chart. The Pre-Set Tool is hardened for maximum durability. The Pre-Set Tool can be used repeatedly to set the ferrules onto the tubing for easy installation.

PART NUMBER	TUBE SIZE
1-DPST	1/16"
2-DPST	1/8"
3-DPST	3/16"
4-DPST	1/4"
5-DPST	5/16"
6-DPST	3/8"
8-DPST	1/2"
10-DPST	5/8"
12-DPST	3/4"
14-DPST	7/8"
16-DPST	1"

Place Pre-Set Tool in a vice and tighten nut specified number of turns.

Back nut off of Pre-Set Tool. Notice the ferrules have swaged into the tubing. Now take tubing to installation area.

## TUBE INSERTION CHART

For pre-cutting tubing to length, the following chart shows the additional length inside the fitting assembly.

**TUBE  
INSERTION  
DEPTH  
FINGER  
TIGHT**

TUBE SIZE	T TUBE OD	B INSERTION DEPTH
1	1/16	0.34
2	1/8	0.52
3	3/16	0.54
4	1/4	0.61
5	5/16	0.65
6	3/8	0.67
8	1/2	0.90
10	5/8	0.96
12	3/4	0.96
14	7/8	1.02
16	1	1.24

NOTE: Dimensions subject to change, to be used for reference only.

## TUBING—GENERAL APPLICATIONS

Tylok® Tube Fittings are designed to perform in a variety of applications that demand high performance. The CBC-Lok® and CS-Lok® product lines have been engineered to provide optimal performance. However, tubing should always be considered as an important factor in the design stages of any system. Below is a table that describes some general uses for different types of materials. The table is provided as a reference to the Engineer in the design process.

Tylok suggests the use of seamless, fully annealed tubing. Welded tubing may be used with Tylok fittings. However, due to the manufacturing of welded tubing, variables may be encountered. The media flowing through the tubing must be compatible with the tubing itself. It is always a good rule to use like tubing material on like fitting material. If this format is not followed, the ferrules may have difficulty penetrating the tubing, adversely affecting the sealing ability. In addition, dissimilar materials in contact may be sensitive to galvanic corrosion. Tylok recommends ordering tubing material to meet ASTM specifications to ensure that it will be dimensionally, physically and chemically within precise limits. (See Raw Material Specifications chart on page 56.)

TUBING MATERIAL	GENERAL APPLICATIONS
Carbon Steel	Air Lines, High Pressure, High Temperature, Oil, Air, Specialty Chemicals, Hydraulic Gases
Copper	Low Temperature, Low Pressure Water, Oil, Air, Pneumatic Controls, Lube Lines
Stainless Steel	High Pressure, High Temperature, Nitrogen, Helium, Flammable Gases, Hydraulic, Gases, generally corrosive media

## NOTICE

In designing a system incorporating tube fittings and valves, it is the designer's or user's obligation and responsibility to determine the appropriate fittings and valves to be used for each application and to insure proper installation and maintenance.

## LIMITED LIFETIME WARRANTY

Tylok Fittings & Valves are warranted solely against defects in material and workmanship in the performance of the specific functions for which they are designed, as set forth in the published specifications for the life of the product. Should any fitting & valve or its component fail due to a defect in material or workmanship, Tylok will replace said fitting & valve without charge upon return of the failed part and evidence of its failure being due to materials or workmanship. The Warranty above set forth is the only warranty applicable to Tylok products, and is in lieu of any and all other warranties either expressed or implied, including any warranty of merchantability or fitness. Tylok's sole responsibility or liability as a result of any loss or damage due to failure shall be to replace the failed part or fitting & valve, and it shall bear no liability for any incidental or consequential damages to person or property.

## Tylok Liquid Leak Detectors

Tylok liquid Leak Detectors detect gas leaks in hard-to-reach areas

- Safe for oxygen systems
- Sustained bubble action works even on very small leaks and vertical surfaces
- Flexible tube extends for hard-to-reach areas
- Formula dries clean, without staining

Part Number	Container Size	Pull Out Tube Length
LEAK DETECTOR-8oz	8 fl oz. (236ml)	12 inch (30.48cm)
LEAK DETECTOR-Gal	1 Gallon	
LEAK DETECTOR COOL-8oz	8 fl oz. (236ml)	12 inch (30.48cm)
LEAK DETECTOR COOL-Gal	1 Gallon	

### TYLOK LIQUID LEAK DETECTOR

- Temperature rating: Can be used over a temperature range of 27 to 200° F (-2 to 93° C)

Specifications: Meets the performance requirement of:

- MIL-PRF-25567 Leak Detector Compound, Oxygen Systems, Type I, 1 to 70° C (33 to 158° F)
- NFPA 52 Section 6-12.2 Leak Testing Compressed Natural Gas Vehicular Fuel System
- EPA Part 60, Appendix A, Method 21, Section 4.3.3 Alternative Screening Procedures Using Soap Solutions
- Nontoxic, noncorrosive, nonflammable

### TYLOK LOW TEMPERATURE LIQUID LEAK DETECTOR

- **Temperature rating:** Can be used over a temperature range of -65 to 200F (-54 to 93° C)

Specifications: Meets the performance requirement of:

- MIL-PRF-25567 Leak Detector Compound, Oxygen Systems, Type II, -54 to 1° C (-65 to 33° F)
- NFPA 52 Section 6-12.2 Leak Testing Compressed Natural Gas Vehicular Fuel System
- EPA Part 60, Appendix A, Method 21, Section 4.3.3 Alternative Screening Procedures Using Soap Solutions
- Noncorrosive, nonflammable
