

Citrus. Not Salt.

Amazingly compact nuvoH2O water softeners provide naturally conditioned water without the hassle of salt. The nuvoH2O water softeners use a process called chelation (pronounced key-LAY-shun) to soften water. The nuvoH2O chelant, a proprietary citrus formulation, binds with hard water minerals so they cannot react with other elements to produce scale. Unlike salt-based softeners, nuvoH2O not only prevents hard water build-up, but it also removes existing scale. nuvoH2O—A better way to soften water.

- Removes existing hard water scale and prevents scale build-up
- Eco-friendly—no salt, no waste water, no electricity
- Healthier skin and hair
- Softer, brighter clothing
- Use less soap, lotions and conditioners
- Saves \$1,000s in annual household expenses
- Compact design—fits almost anywhere
- Extends the life of your water heater, plumbing fixtures and appliances
- Developed from 25+ years of commercial experience
- Built-in By-pass and Off Settings—no need to plumb a by-pass loop
- FDA and NSF approved
- 90-day, money-back guarantee
- Lifetime warranty

Studio System

Item #: HPS2075-DPSBLF

For condos, townhomes and apartments that are less than 1000 sq. feet, or 1 bathroom, and low water use.

- Size: 5" x 14"
- Weight: 4.5 pounds
- Water flow: 12-15 gpm with 3/4" ports (minimal change to existing flow)
- Maximum pressure: 100 PSI (6.8 bar)
- Capacity: about 20,000 gallons
- Uses 2" x 10" replacement cartridges (Item #: HPS2516C)
- Built-in pressure relief valve
- FDA & NSF approved

Home System

Item #: HPH2100-DPHBLF

For homes between 1,000 and 2,000 sq. ft. and normal water use.

- Size: 5" x 24"
- Weight: 7 pounds
- Water flow: 12-15 gpm with 1" ports (minimal change to existing flow)
- Maximum pressure: 100 PSI (6.8 bar)
- Capacity: about 35,000 gallons
- Uses 2" x 20" replacement cartridges (Item #: HPWH2516C)
- Built-in pressure relief valve
- FDA & NSF approved

*Actual customer images. Results may vary depending on water quality and existing scale quantities.

Our Customers Agree

I've now installed almost a dozen of the nuvo systems and the home owners have all been extremely pleased with them. About two months ago I installed the Manor in my own home and my wife loves it. This is a great product.

—Nate R., Plumbing Contractor

.....

We bought this product with the intention that with the money back offer we would be in the same place if it didn't work. WOW!!

Were we wrong about it not working. We read all the different reviews and agree that the review timelines seemed a "little suspect." We couldn't be happier that we were proven wrong. The unit came in 4 days from the time the order was placed and was easy to install. As far as the claims that it helps clear residual build-up in shower heads and faucet heads, well again we were amazed. The shower head in our bath has always had a few "sprayers" that dribbled water. The shower is spraying out of all "sprayers" and giving us the best shower our tankless water heater ever gave us!!!! The biggest thing we have noticed is that the water feels better on our skin, hair, clothes, and dishes are coming cleaner. I am a contractor and I prefer to use new products (tankless water heaters, dual flow toilets, etc.) on my own home before I recommend any "new technology" to anyone. I can say in my opinion this product works and works well!!!! The company has great customer service and I was very pleased with the purchase. Hope this helps anyone looking for a solution to hard water issues.

—Dave Y., Contractor

.....

I've now had your NUVO system in my house for 4 months. The same day I had the NUVO system installed, I had a new hot water tank installed, a new set of delta faucets installed in the sink in our ensuite, as well as completed a newly renovated shower installation in our ensuite along with new faucets and diverter. The NUVO started working that same day. I am prepared to recommend this product to our existing and new homeowners as an adjunct to any other system(s) they may have in place. If they currently do not have any systems, this should be a MUST as a first step to improving their home water supply.

—Albert K., Contractor
