IMPORTANT

Read this installation manual completely to ensure proper installation, then file it with the owner or maintenance department. Compliance and conformity to drain requirements and other local codes and ordinances is the responsibility of the installer.

Separate parts from packaging and make sure all parts are accounted for before discarding any packaging material.

Flush the water supply lines before beginning installation and after installation is complete. Test the unit for leaks and adequate water flow. Main water supply to the eyewash should be "ON" at all times. Provisions shall be made to prevent unauthorized shutoff.

The ANSI Z358.1 standard requires an uninterrupted supply of flushing fluid. Bradley plumbed emergency fixtures require a minimum of 30 PSI (0.21MPa) flowing pressure. Flushing fluid should be tepid per ANSI Z358.1.

Self-closing spring-loaded valves are not UL classified to ANSI Z358.1.

The inspection and testing results of this equipment should be recorded weekly to verify proper operation. This equipment should be inspected annually to ensure compliance with ANSI Z358.1.

Workers who may come in contact with potentially hazardous materials should be trained regarding the placement and proper operation of emergency equipment per ANSI Z358.1.

For questions regarding the operation or installation of this product, visit www.bradleycorp.com or call 800-BRADLEY (272.3539).

Product warranties and parts information may also be found under "Products" on our web site at bradleycorp.com.

Supplies Required:

- (3) 3/8" floor anchors and bolts
- Teflon tape and pipe sealant
- Piping to 1 1/4" NPT water supply inlet (30–90 psi)
- Piping to 1 1/4" NPT drain outlet on unit (if included with unit)
- Adequate supply pipe supports
- Provisions to dispose of shower waste water (minimum 30 gallons [115 liters]) should be made (minimum 4" [102mm] drain.
- OPTIONAL: sign-mounting hardware

Local codes may require the installation of a backflow prevention valve to complete proper installation. Compliance with local codes is the responsibility of the installer. Valve must be tested annually to verify that it is functioning properly. Backflow prevention valves are not included with the fixture and may be supplied by the contractor or purchased from Bradley Corporation.

All dimensions assume standard thread engagement. Variations in manufacturing allow for $\pm \frac{1}{8}"$ (3mm) per threaded joint. To find the tolerance of a dimension, add the number of thread joints across the length of the dimension and multiply it by $\frac{1}{8}"$ (3mm).

Water Flow Rate	
Showerhead	20–26 gpm
Eyewash	4–5¼ gpm
Eye/Face Wash	4–5¼ gpm
Body Wash	2–8 gpm

1 Assembly — Connect Base and Eyewash

- ✓ *Standard eyewash unit is shown. Other units are similar.*
- ✓ *Connect components before securing the base to the floor. When connecting components, use the rubber grip pad (provided) around pipes to prevent marring.*
- ✓ *Apply pipe sealant (supplied by installer) to all male-threaded pipe joints, making sure not to get any excess over the edge of the pipes.*
