

VERSAFILLER®

Model PWSBF (retro fit) and P*SBF Family of Drinking Fountains/VersaFiller combo

Installation Instructions

The VersaFiller is an extension of the Aqua Pointe® product line that mounts directly above Versacooler® I and II products. *No additional electrical connections are required.*

If installed onto a refrigerated cooler, then chilled water can be dispensed through the VersaFiller. Otherwise, room temperature water will be dispensed.

The VersaFiller is shipped partially assembled.

On the combo units, the cooler is plumbed and ready to attach to the VersaFiller.

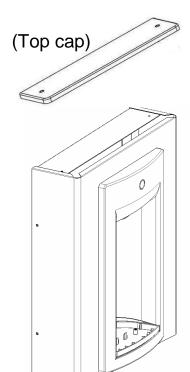

When completed, the finished assembly will look like this:

OR

Section 1: Getting Started

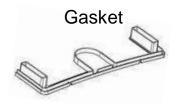

What's Included:

VersaFiller Sports Bottle Filler- (with wrapper, alcove and top cap installed onto the frame)

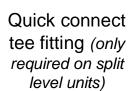

Drip tray

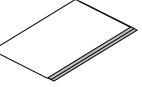

Anti splash grate

38" of ¼ OD plastic tubing with 19" of sponge tubing insulation (included with "Versafiller ready" coolers)

Installation instructions

Anti Splash grate screws (2)

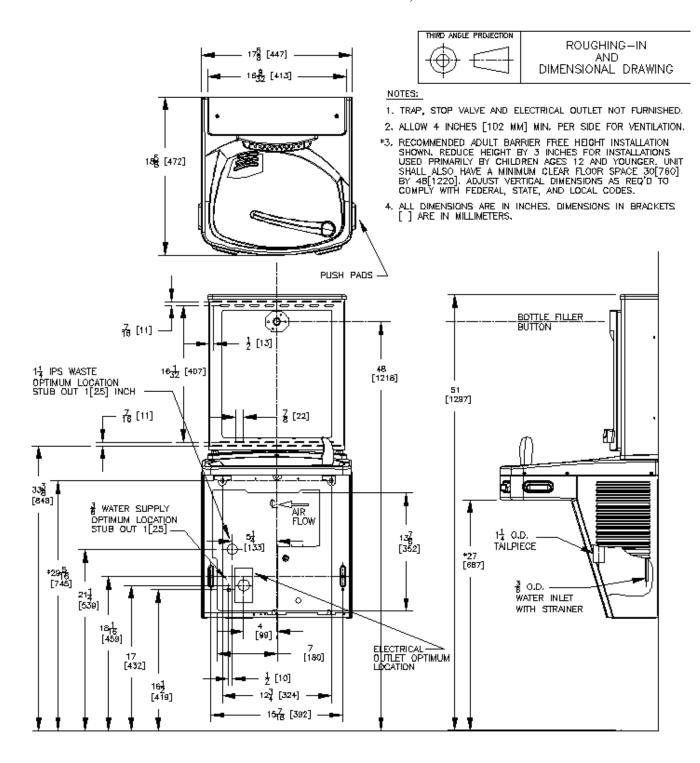

Snap bushing

Tools required:

- > 3/8 drill bit that will drill through SS top (retrofit version only)
- Electric drill
- Small tubing cutter for copper tube
- > 1/4 " nut driver
- # 2 Phillips screw driver
- → #15 torx bit driver

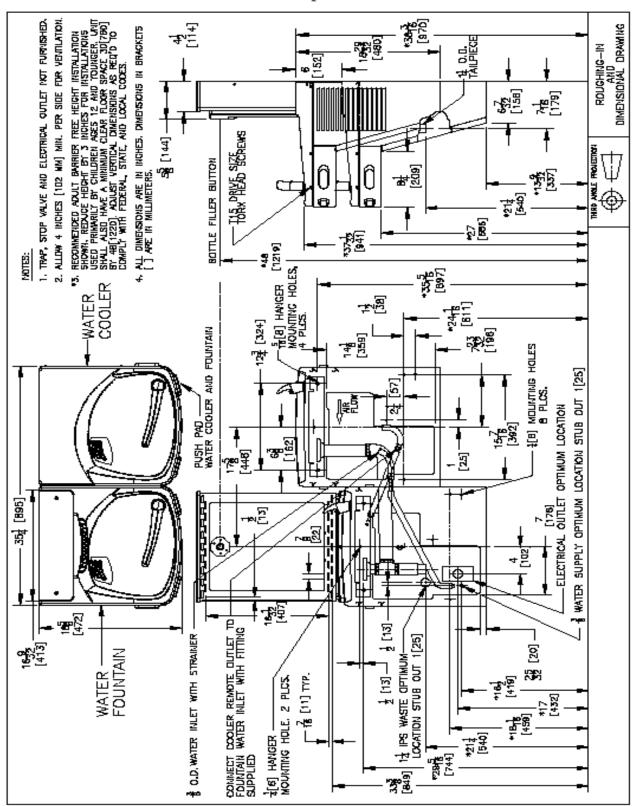

Section 2: Rough In Drawing

Oasis PWSBF: Versacooler® II Models PAC, P8AC with VersaFiller

Section 2: Rough In Drawing

Oasis PWSBF: Versacooler® II Split Level Models with VersaFiller

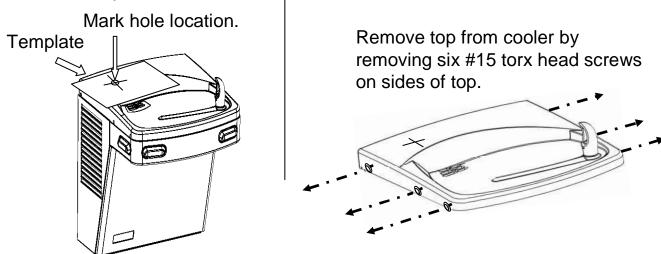

^{*} On split level models, the VersaFiller must be mounted on the low unit in order to meet ADA guidelines.

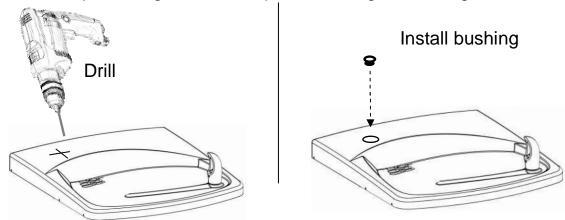

Note: Proceed to Sect 3B Step 5 if the cooler is purchased "VersaFiller ready".

A: Drilling hole in the top for water line connection.

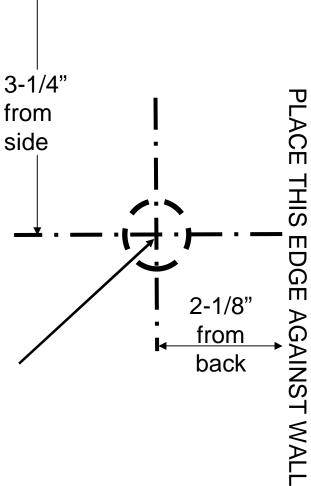

- 1. Disconnect power by <u>UNPLUGGING</u> unit. It might be necessary to remove the front panel to get access to the power.
- 2. Turn OFF water supply to the unit. It might be necessary to remove the front panel to access the water stop valve.
- 3. Place hole template onto cooler top so it is aligned with the left side of unit and wall. SEE NEXT PAGE FOR TEMPLATE
- 4. Mark hole location
- 5. Remove top from unit.

- 6. Using a 3/8 drill bit, drill a hole through top.
- 7. Install snap bushing into hole to protect tubing from being cut.

ALIGN THIS EDGE WITH LEFT EDGE OF COOLER TOP

Mark this center point on the top. Remove the top from the cooler. Then drill a 3/8 hole through the top at the marked center point.

USE THIS TEMPLATE TO MARK THE HOLE LOCATION ON COOLER TOP

B: Connecting the water line

Note: If you are retrofitting the Versafiller to an existing cooler, follow the instructions starting on the next page.

For the <u>single</u> "Versafiller ready" cooler, the tube to connect to the Versafiller is found inside the access panel (the compressor compartment). This tube supplies cold water from the cooling tank to the Versafiller.

1/4" OD tube to connect to Versafiller (no tee is needed)

For <u>split level</u> "Versafiller ready" coolers, the tube to plumb in the Versafiller is packaged in the dummy unit.

Remove tube from bag.

First, remove plug from fitting on tank drain

Next, insert end of tube into fitting.

Tee and tube to Versafiller are packaged with PWSBF unit. One branch of tee will supply valve on dummy unit. Other branch of tee will connect to Versafiller. **Note:** "Versafiller ready" single units do not use tee since water line from cooling tank only supplies water to bottle filler.

Tube to connect valve on dummy unit

Tube to connect Versafiller

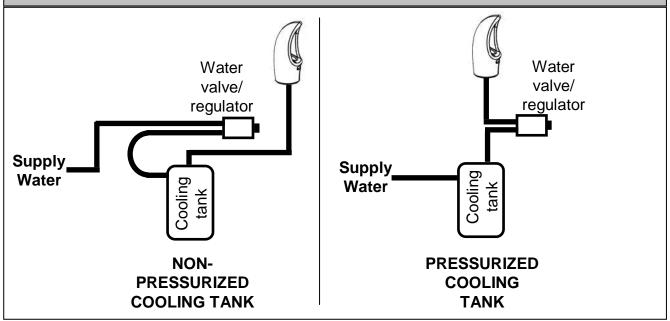

Tube to connect chilled water to dummy unit and Versafiller

Go to Step 5 "Final steps for both product families:"

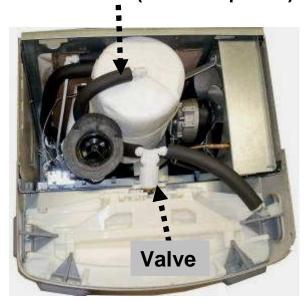

To retrofit the Verafiller to an existing unit, follow the instructions below:

If the cooling tank is non-pressurized, then go to the "Pressurizing the cooling tank" addendum section. Otherwise, proceed to step 1 below. Non-pressurized units are <u>single</u> units made since December of 2009. Refer to the schematic below to identify the system that you have.

 With the cooler top removed, find the tube going from the cooling tank outlet to the valve. The TEE fitting (supplied) will need to connect between the cooling tank and valve.

Outlet Tube (insulated plastic)

P8AC family

Outlet Tube (insulated copper)

P8AM family

Section 3: Installation: For the P8AC Version: Versacooler II

2. Disconnect tubing from the elbow on the valve.

3. Using the 38" piece of tubing provided, cut 6" and install it on the end of the TEE. Install the remaining tubing onto the branch of the TEE. Connect the other end of the TEE to the tank outlet tubing (tube that was disconnected from the elbow).

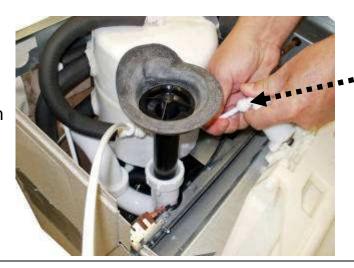

32" tubing

6" tubing

4. Route the TEE and tubing under the waste drain and connect the 6" length to the water valve elbow.

TEE

Water valve elbow

Go to Step 5 "Final steps for both product families:"

Section 3: Installation: For the P8AM Version: Versacooler I

Remove tar tape

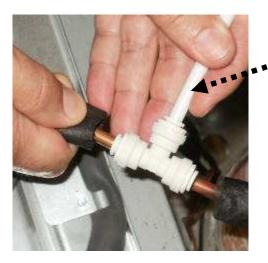

2. Remove tar tape from the insulation on the outlet tube.

3. Pull back insulation and cut the copper tube with a tubing cutter. Cut where there is at least 1 inch of straight tubing on each side of the cut.

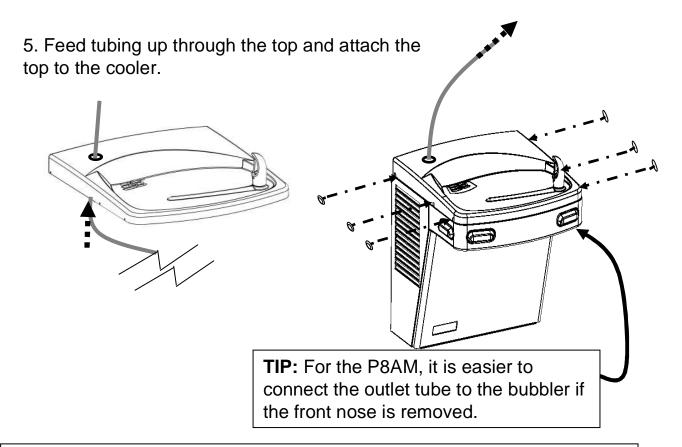

4. Install TEE fitting by connecting the copper tubing to each end. Then install the 32" piece of plastic tubing to the TEE branch.

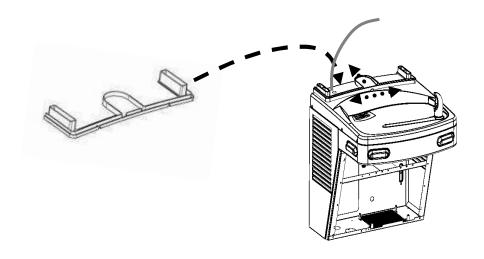

32" plastic tubing (supplied)

Section 3: Installation: Final steps for both product families:

C: Mounting the frame to the wall

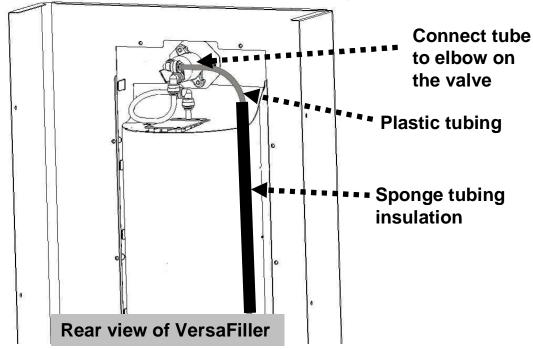

1. Place rubber gasket on top of the cooler so it is centered left/right and against the wall.

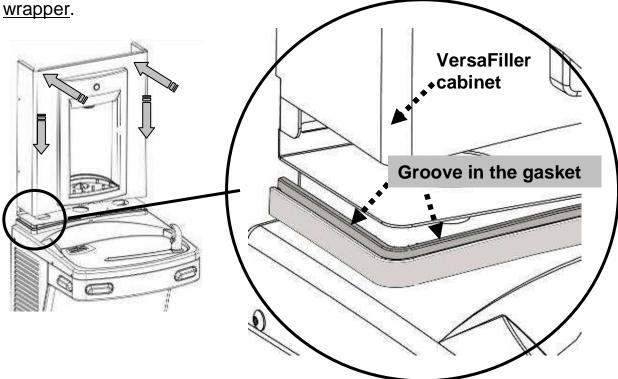

2. Set the wall frame onto the gasket. Center it left/right and push it against the wall and mark hole locations for wall fasteners. The gasket will set the frame at the proper height.

Wake sure to pull the plastic tubing up through the hole in the frame.

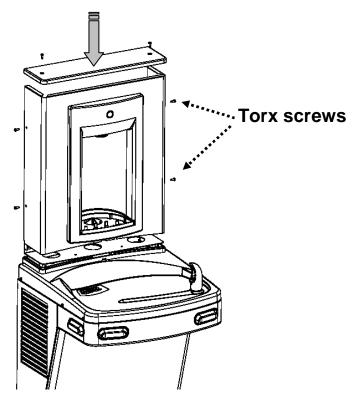

- 3. Secure frame to the wall with fasteners (not provided). Pull plastic tubing up through the hole in the frame.
- 4. Slide sponge tubing insulation over water line. Connect the tubing to the INLET elbow on the back of the VersaFiller assembly.

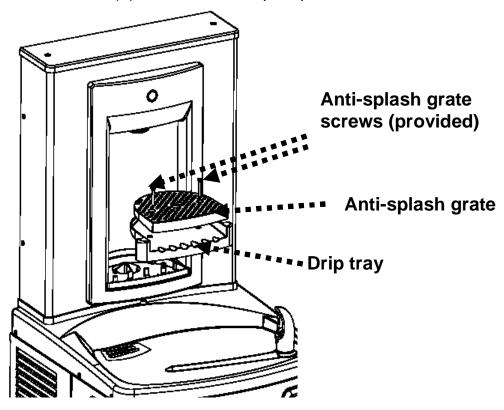

5. Set the VersaFiller cabinet into place. MAKE SURE the cabinet fits into the *groove* in the rubber gasket on both sides and front of the

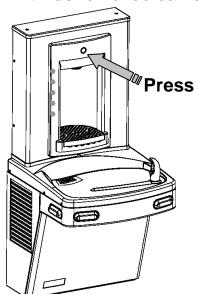

6. Attach VersaFiller assembly and top cap to the frame using the six (6) torx screws.

7. Install the drip tray and anti-splash grate into the alcove area and secure with the two (2) stainless steel phillips head screws.

8. Turn ON water supply and check for leaks. Press the activation button and release any trapped air from the system. Plug in the power cord and replace the front panel IF it was removed earlier.

INSTALLATION COMPLETE

Addendum Section: Pressurizing Cooling Tank

The water should already be turned OFF and the power disconnected.

Unit as it appears with removed

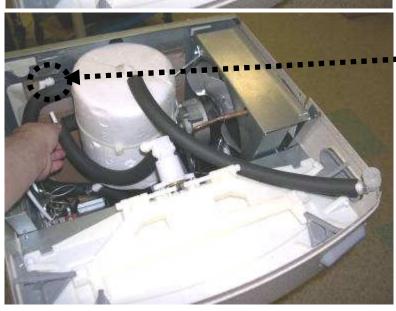

STEP 1

Unplug un-insulated water line from water valve inlet (JG elbow located left side of water valve facing the front of the cooler). Set tubing aside (careful to not contaminate water contact end).

 Unplug tubing from JG elbow leading to cooling tank inlet.

STEP 3

Plug un-insulated tubing that was removed in step 1 into JG elbow leading to the cooling tank from step 2.

STEP 4

Unplug tubing that is connected to the water valve outlet (JG elbow located on the right side of valve facing the cooler).

STEP 5

Connect tubing from step 4 to JG elbow on the left side of the valve.

Step 6

Unplug JG tubing from the cooling tank outlet. Do not set it down.

Step 7

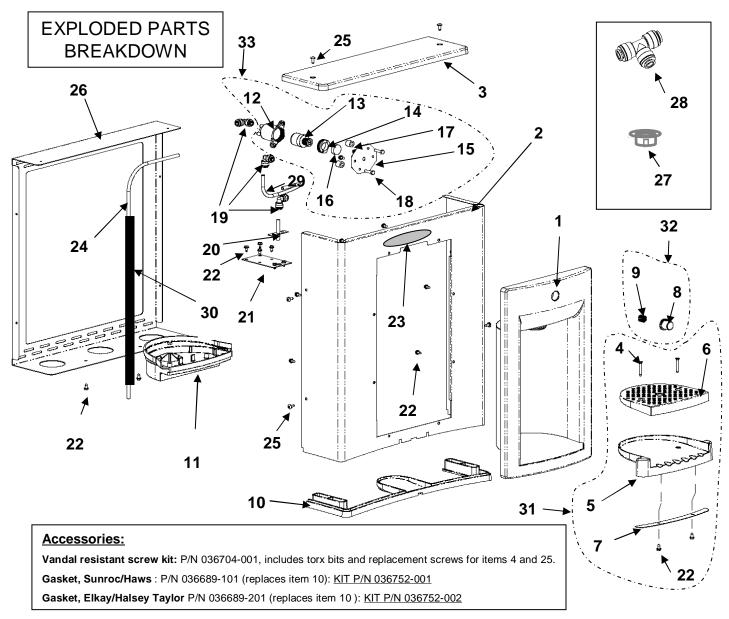

Using tubing removed in step 6, plug into JG elbow on the right side of the valve. (be sure to rout the tubing under existing tubing installed in step 4 as shown)

Step 8

Using tubing that is connected to the JG elbow left side of valve (done in step 4), and plug the other end to the JG fitting at the top of the cooling tank.
