

Large-Diameter Waterstops

For sewer pipe 8" (203mm) and larger

Large Diameter Waterstops For Sewer Pipe 8" (203mm) And Larger

Order by specifying the outside diameter (O.D.) of the pipe which is to receive the waterstop. Minimum size: 8.5 inches O.D. (55.6mm O.D.)

How To Install: Slide custom waterstop over clean end of entrance pipe. Position waterstop on center line of manhole wall. Tighten the stainless steel band to 60"/lbs. torque. Stainless steel band is furnished with the waterstop. Grout around the waterstop as normally done to close an opening in a concrete wall.

For waterstops smaller than 12", see below.
