**AMERICAN INNOVATION**

**JUST BETTER**

KEEPING IT COOL IN THE USA | HVAC TOOLS, VALVES, AND FITTINGS

After a roller-coaster of a ride in 2020, the world thought 2021 might return to some level of normalcy. Wow! In 2021, all facets of our lives, business and personal, were again impacted in profound manners. The continued impact of the pandemic along with supply chain disruptions and the accompanying inflationary pressures affected us all.

As a USA manufacturer in Aurora, Illinois, JB continued to operate relatively normally. Our domestic commodity supplier partners did a great job keeping our factory running and keeping supply disruptions to a minimum. While always looking for cost efficiencies and helping minimize price volatility, JB will never sacrifice the tool quality and delivery synonymous with the JB name.

A quick fun fact – 85% of JB tools sold are Made in the USA, with the remaining tools engineered and designed in the USA.

Our team is especially proud of the new tools in this year's catalog. These JB-designed and manufactured tools were recognized by the industry with awards and provide time-saving tools for our customers. Our newest tools include:

- PLATINUM 12 CFM Vacuum Pump
- PLATINUM FLEX AC/Battery Powered Vacuum Pump
- F6-BOOST Refrigerant Recovery Unit with industry-leading speeds
- ATLAS DS-250 Wireless Digital Scale
- ATLAS DS-5000 Propane Scale
- CLIMATE CLASS Wireless Temperature Clamps and Psychrometer/Hygrometer
- ACCELERATOR Rapid evacuation kit featuring new Valve Core Removal Tools and Y-FORCE High-Speed fittings
- JB GO app

We are incredibly excited about our tool roadmap that will include a full suite of wireless tools and other innovative tools to make users of JB tools more efficient so they can get off the job site faster.

JB launched a new website in Q4 2021 and is in the process of creating new digital content, so be on the lookout for new videos and a social media presence. These digital components will enhance our ability to support training sessions, pump days, and finally, in-person trade shows.

As we enter 2022, please know we are grateful for the continued business and partnerships. JB's philosophy is to continue to support only authorized wholesale distributors and offer the best American designed and manufactured tools, just as JB has done since 1967.

We thank our customers for the continued support and look forward to a great partnership in 2022 and beyond!

I would also like to thank everyone in the JB family, without whom none of this would even be possible. Their commitment and devotion inspire us to work harder every day.

Wishing all a safe and healthy 2022!!

## Vacuum Pumps

### Change Your Pump Oil

Deep vacuum cannot be achieved with contaminated oil, which can damage the pump and shorten pump life. JB recommends pump oil be changed after every evacuation for maximum performance and pump efficiency.

### Use a Micron Gauge

The best test to check for oil contamination is through a micron gauge. In a leak-free system, if the micron gauge is not reading a deep vacuum, the oil is contaminated and should be changed. During the testing process is the only time it is recommended to have a micron gauge attached directly to pump.

## Choosing Proper CFM

### CFM<sup>2</sup> = Maximum Tonnage Rating

Take the CFM rating and multiply it by that number to find the maximum number of tons a pump is rated for:

**3 CFM pump (3x3) is rated for 9 tons**  
**7 CFM pump (7x7) is rated for 49 tons**

Depending on the system line size, it is better to use two or more small, easily maneuverable pumps at different locations to overcome pressure drop issues and evacuate faster than a single, large pump. Pumps in the 1.5 to 10 CFM class are adequate to handle 99% of the work. JB pumps are built to last and are the best and longest-lasting pumps in the industry.

Using a Vacuum Gauge

How to Measure Evacuation

Digital vacuum gauges such as the **DV-41 SUPERNOVA**, the **DV-40S** or the **DV-22N** can precisely read the low pressures produced when evacuation/dehydration is complete. Evacuation is complete when a system holds at 500 microns. Although a compound gauge can indicate that a vacuum is being produced, it cannot measure pressure accurately or indicate whether moisture or contaminants remain in the system. A digital vacuum gauge can positively indicate that the system is free of leaks and non-condensables.

Placement of the digital vacuum gauge is important. The ideal location to measure vacuum is at the system, not the pump. Attach the digital vacuum gauge directly to the system, isolating the gauge from the pump, hoses, and manifold for accurate measurement of the vacuum in a system.

For faster evacuation time and to achieve optimum pump performance:

1. Select the correct pump CFM.
2. Use clean oil and be sure to change pump oil with **BLACK GOLD** Vacuum Pump Oil after each use. Clean oil improves pump efficiency and extends pump life.
3. Remove restrictive valve cores from both high and low side fitting with the **A32525N** and **A32500N** valve core tools.
4. Evacuate both high and low sides of the system simultaneously with a short, 3/8" diameter or larger size evacuation hose, such as the **VL-100 VELOCITY** Rapid Evacuation Kit.
5. Attach a **DV-22N** digital vacuum gauge directly to the system to monitor accurate measurement of vacuum.

### 2mm Pressure Control Hose

Pressure control hose is constructed of an inner core of polyamide and an outer cover of vinyl. The polyamide inner core is wrapped with a synthetic fiber to give the hose pull strength. The polyamide inner lining is the reason it can withstand higher pressures and eliminates the vibration failures of copper capillary tube installations. Higher temperature ratings up to 266°F eliminate the failures caused by maximum loads on rubber hoses.

- Highly flexible; extremely short bending radius; 2mm ID
- Suitable for all non-corrosive refrigerants including natural gases, HFC, HFO, HC, and CO2 sub-critical refrigerants and the relevant special oils such as ester- and PAG
- 90° x Straight, 1/4" FFL Connects
- Absorbs all possible multidirectional vibrations

## Easily Replace/Repair Head with Basic Tools

### Replace Head CLSX-RH

1. Attach 3/8" wrench to the flats of the head base. Use an adjustable wrench on hex of the barb, and turn counterclockwise to remove the head. Apply one to two drops of a standard thread sealant or Teflon tape to the pipe thread of the hose barb.
2. Attach new head and finger tighten, turning clockwise. Use 3/8" wrench and adjustable wrench to fully tighten. Torque to 6ft/lbs (approximately 3/4 to 1-1/2 turns past finger tight).

### Rebuild Head CLSX-RK

1. Attach 3/8" wrench to the flats of the head base. Use an adjustable wrench on hex of the barb, and turn counterclockwise to remove the head.
2. Use spring clip pliers to remove internal spring clip from inside of end cap assembly. Remove coupler nut exposing cup assembly.
3. Remove the metal and nylon thrust washers.
4. Stabilize slot at base of cup assembly with straight-edge and using a 3/8" wrench, turn counterclockwise to detach end cap from cup assembly. Remove and replace end cap o-ring.
5. Remove and discard spring, depressor, and gasket from inside cup using pointed hook or removal tool.
6. Remove and replace o-ring from slotted end of cup.
7. Insert new gasket, depressor and spring in cup. Apply one to two drops of a standard thread sealant or Teflon tape to the pipe thread of the end cap. Reattach end cap with new o-ring to cup assembly using a 3/8" wrench and a straight edge.
8. Replace the metal and nylon thrust washers. Place cup assembly into coupler nut.
9. Use spring clip pliers to secure internal snap ring inside of end cap assembly. Refer to REPLACE HEAD Step 1 and 2 to reassemble.

## CLS Series Repair Instructions

### For use with 33112RK/33115RK Rebuild Kits

1. Hold the cup in one hand so that the slotted face of the cup is exposed. Pinch the cup seal o-ring and insert it into the large groove to seat it correctly as shown.
2. Install the barb seal o-ring in the groove located between the hex feature and the back portion of thread. Gently stretch and pull it over the threads of the barb fitting. Ensure the seal is not torn or damaged.
3. Insert bushing/seal into the thread side of the cup. Brass bushing side goes in first with seal facing up as shown.
4. Insert depressor with three-blade feature into the cup assembly. The depressor fits into the bushing/seal installed in the previous step. The depressor must sit flat and true to the seal surface.
5. Place spring into cup assembly over the emboss on the back of the depressor.
6. Screw cup assembly, with spring in an upward position, onto hose barb fitting. Hand tighten the cup to the barb ensuring cup seats over the barb gasket (o-ring) and does not damage the o-ring.
7. Tighten the cup and hose barb using a 9/16" open-end wrench and 1/16" steel blade. Do not over tighten—only 25 to 30 in/lbs is required.
8. Insert barb/cup assembly into the coupler. Seat the thrust washer flat onto the hose barb and inside the coupler. Install the internal snap ring and seat it into the groove of the coupler.

For additional information on assembly or disassembly, refer to 33112RK or 33115RK Rebuild Kit Instructions online at [JBIND.COM](http://JBIND.COM).

## Permeation

Even with the advanced technology of today's hoses, permeation through the hose compound still exists.

Only the finest materials available are used to manufacture JB hoses to ensure a minimum amount of permeation (seepage or diffusion) of the refrigerant through the hose. KOBRA® hoses are designed as transfer lines for all refrigerants (except ammonia), nitrogen, and refrigerant oils.

When checking pressure rise, the atmosphere will permeate to the lower pressure in the hoses, and the micron reading will slowly rise.

# Access Valves

## Access Valve Overview

100% Made in the USA

JB machines access valves at our Aurora, Illinois facility using 100% American C360 alloy brass sourced from US mills. Our brass fittings and access valves have high tensile strength and resist corrosion. All of our valves are machined according to strict AHRI specifications to ensure proper sealing of valve and core surfaces. Quality and dependability come standard with an American-made tools.

ACCESS VALVES SPECIFICATIONS	
<b>AHRI Standard</b>	720-2002
<b>AHRI Torque</b>	3.0 - 5.0 inches/pound
<b>Temp Range</b>	-40°F to 250°F (-40°C to 121°C)
<b>Valve Bodies</b>	Brass
<b>Valve Core</b>	Stainless steel and brass for use with all refrigerants such as R12, R22, R134a, R410A, and R502. Resistant to oils, alkalites, and diluted mineral acids

### Tube Sizing: ODS and ODF Fit Descriptions

Descriptions for solder/braze access valves specify the connecting tube OD. Size and type fit illustrated are examples of the types of fit for an A31723 valve. The connecting line slips around access fitting; refer to AC/R Copper Tube Fitting Guide and Connecting Tube Size table.

There are two types of ODF fit—external tube fit and swage fit. JB access valve descriptions for ODF refer to swage fit. The connecting tube OD is the same OD as the fitting end. Therefore, the A31723 example above will also slip into 5/16" OD tube. If connecting to wrought copper fitting, use ODF swage size.

CONNECTING TUBE SIZE			
TUBE SIZE	ODS <i>Internal Tube Fit</i>	ODF <i>External Tube Fit</i>	ODF <i>Swage Fit</i>
1/8"	—	3/16"	—
3/16"	1/8"	1/4"	3/16"
1/4"	3/16"	5/16"	1/4"
5/16"	1/4"	3/8"	5/16"
3/8"	5/16"	—	3/8"

For easy sizing reference, the last two numerals of our flare fittings correspond to their respective tube sizes.

SIZING REFERENCE GUIDE			
NUMBER	TUBE SIZE	NUMBER	TUBE SIZE
02	1/8"	08	1/2"
03	3/16"	10	5/8"

### Valve Core Removal Tool with Slide Valve Side Port

Designed with the daily job of technicians in mind—The Dealer Design Award-winning A32525SV valve core removal tool utilizes an additional slide valve side port to accommodate a vacuum gauge.

Primary function is to remove and replace the valve core under pressure and/or to remove valve cores in refrigeration systems to increase evacuation and charging performance.

- Swap out damaged valve cores under pressurized air conditioning and refrigeration systems for much faster evacuation
- Slide valve side port valve provides an excellent location to attach a vacuum gauge so system can be checked for absence of moisture and air
- Slide valve side port provides an easy open/close so vacuum gauge can be removed without the introduction of air into the system before charging
- Protect sensitive vacuum gauge sensors when left on during the charging process by closing slide valve side port
- In-line actuated handle allows the contractor to open and close the valve in tight areas with a single finger
- Uses a series of o-rings and precision machining to stay sealed and not leak during evacuation
- Solid brass construction with the tip machined from A2 tool steel extends tool life
- Made in the USA

## American-made Brass

### SAE 45° Flared Tube Fittings

JB fittings are for use with copper, brass, aluminum, steel, and plastic tube provided an acceptable flare could be generated with the material.

Vacuum and pressures of 5,000 psi can be handled depending upon the size, material, and conditions. Using a 4:1 safety factor, the following general rule (excluding plastic tube) is used:

**3,000 psi to 1/4" 2,000 psi to 1/2" 1,500 psi to 1"**

Long nuts are recommended when vibration is a factor. Tubing should be double-flared in extreme applications to minimize flare thinning on over-tightening.

Fittings listed generally comply with SAE, ASA, ASME, and MS standards; however, when design makes dimensions critical, please contact customer service for samples and/or prints for testing and evaluation.

Tube sizes listed are OD (outside diameter). To determine nominal (water tube) size, subtract 1/8", thus 5/8" OD equals 1/2" nominal. Pipe sizes listed are standard nominal pipe size, and threads are to dry seal taper pipe standards. JB will provide flare fitting to SAE Standard J513 whenever possible. In some cases, slight deviations will occur when full compliance fittings are not available.

Heavy-duty ACR tube fittings generally conform to SAE, ASA, and AHRI Standards for hydraulic, marine, and refrigeration service. Long dry seal pipe threads minimize leakage and provide more clearance for tightening flare nuts. Shapes, elbows, tees, etc., are made from brass forgings to maximize strength and eliminate cracks.

### Assembly Instructions

1. Cut tube square and remove cut-off burr
  2. Slide nut on tube, threaded end facing end of tube
  3. Flare tube following flaring tool manufacturers instructions (check flare quality)
  4. Thread nut on to fitting body "hand tighten"
  5. With proper wrench, tighten to a solid feel
- CAUTION: Over-tightening and dirt can damage fittings and/or tube causing leaks.

NOTE: Lubrication of flare faces and threads is recommended when practical.

Copper seal gaskets (B2) series furnished with all female flares

Fiber gaskets (K1 and D/E) furnished with all drum adapters (K1-1 through 8)

# Brass Fittings

JB INDUSTRIES

**PRO TIPS**

## Brass Pipe Fittings

American-made forged brass pipe fittings manufactured from CA 377 alloy and threaded to Dry Seal Taper Pipe Standards to comply with SAE, ASA, ASME, and MS Standards.

Forgings can be used to pressures of 5,000 psi depending on size, material, and conditions.

- Vibration-resistant
- Low cost
- Easy assembly

Recommended for use with a compatible thread sealant and tightened 2-1/2 full turns past hand tight; over-tightening and dirt can damage fittings.

# Ball Valves

**JB INDUSTRIES**

## Full Flow Refrigeration Ball Valves

Large port design that provides a minimum pressure drop with straight through flow. Copper end fittings reduce installation time without disturbing valve. Two types of ball valves to suit your needs—traditional refrigerant ball valves with brass actuators and a working pressure rating of 500 psi, and E-Line ball valves featuring stainless steel actuators and a working pressure rating of 700 psi.

Fig 1 – Measurement Chart Key (Fig 1:1 - Fig 1:6 charts page 63)

Fig 3 - Anatomy of a Ball Valve (9-17)

- 9 Copper tube extensions
- 10 Hermetic welded and brazed joints
- 11 Reinforced Teflon seats
- 12 One-piece forged brass body
- 13 Bearing washer
- 14 Changeable reinforced PTFE stem packing
- 15 Packing gland
- 16 Stem cap assembly with neoprene seal
- 17 Chromium plated ball with vented valve

Fig 2 – Ball Valve Operation (7-8)

- 7 Quarter-turn mechanical stop. Positive open and closed positions. Packing gland adjusting nut.

## Shutoff Ball Valves

- Straight through flow design has no restriction
- Quarter-turn and valve is fully open or closed
- Made in the USA

V34900

## Needle Ball Valves

- Resistant to gasoline, oils, and water
- Metal-to-metal seating provides ease in shutoff
- Working pressures of 105 psi

NV62-4

## E-Line Actuator Retrofit Caps

For the replacement of existing caps on installed valves. Secures the cap assembly to valve neck, allowing the center post to easily turn for on/off operation. Utilizes a Teflon® o-ring stem seal and base seal to assure a positive seal offsetting any stem packing leak.

# Capillary Tubing Length Conversion Chart

It is recommended that conversions be made using factors within the unshaded area.

1. Locate recommended Cap Tube ID in left hand column
2. Read across and find conversion factor under Cap Tube ID Size
3. Multiply the given length of the recommended cap tube by the conversion factor
4. The resulting length (min. 5ft/max.16ft) of copper cap tube will give the same flow characteristics as the original recommended cap tube

**Example:**

Recommended cap tube: 9'-.040 ID

Locate .040 in left hand column. Read across the recommended conversion:

**Part No. TC-36 = .62, Part No. TC-42 = 1.25**

Multiply the recommended cap tube length of 9' by the conversion factor:

**Part No. TC-36 = 9' x .62 = 5.58"**

**Part No. TC-42 = 9' x 1.25 = 11.25"**

Either of these cap tubes will give the same results as the original cap tube

Additional tool warranty information available online at [www.jbind.com](http://www.jbind.com).

NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. Technical information, recommendations, and advice as to properties and usages of materials, design, installation, and use of tools, engineering, and other matters are provided as an accommodation and are intended only as suggestions. Although they are believed to be accurate, based on JB's knowledge and experience, JB assumes no obligation or liability for any results obtained in their use or application, and they are not to be construed as establishing any warranty, express or implied. In no event shall JB be liable for claims for any damages whatsoever (whether direct, foreseeable, consequential or special) suffered by buyer or anyone else arising out of any breach by JB. JB makes no warranty to those defined as consumers in the Magnuson-Moss Warranty-Federal Trade Commission Improvement Act.

Disclaimers: All tool items pictured, described, or otherwise displayed herein are subject to change, alteration, and/or modification at any time by JB Industries, Inc. The terms and conditions for the purchase of JB Industries, Inc. tools are subject to change, alteration, and/or modification at any time by JB Industries, Inc. and will be made available upon request to JB Industries Inc. and shall be provided to customers of JB Industries, Inc. at time of purchase.

**Over-the-Counter (OTC) Warranty:** Applies ONLY to newly purchased F6™ Refrigerant Recovery Unit (3 year OTC), PLATINUM® Vacuum Pumps (2 year OTC), ELIMINATOR® Vacuum Pumps (2 year OTC), and PLATINUM® FLEX Vacuum Pumps (1 year OTC). OTC Warranty is limited to manufacturing defects and is VOID if the problem has been determined to be caused by abuse or misuse.

**Lifetime Manifold Bar Warranty:** Manifold bar only has a lifetime warranty, while the components, i.e. gauges, hoses, handles, hose holders, etc. are covered under the limited warranty policy.

**For Professional Use Only:** JB manifolds and tools are designed for use by technically trained HVAC/R service engineers only. Due to the high pressures encountered in all systems that manifolds will be used on, plus the dangers due to the physical and chemical nature of refrigerants and oils present in all systems, misapplication could result in injury or death.

## RETURN FOR REPAIR

JB provides reliable, superior quality tools—However, in the event your instrument requires repair, you are required to contact JB Customer Service Department to obtain a Return Goods Authorization (RGA) number.

Ensure that all returned tools are packed to avoid damage in shipment. Warranty claims for items damaged in transit will not be honored. Refrain from applying stickers or strong tape on tool face as item may be returned with no manufacturer defects. Paperwork should be placed in a separate plastic bag and should include JB's assigned RGA number, a description of the problem, copy of invoice, and any customer assigned repair or purchase order number, if applicable. Please provide contact information (name/address/phone/email) of whom to inform of package receipt as well as the person authorized to accept repair charges should the warranty be void. Tool returns for repair will not be accepted without an RGA number from JB Industries.

**Over-the-Counter (OTC) Warranty:** Applies ONLY to newly purchased F6™ Refrigerant Recovery Unit (3 year OTC), PLATINUM® Vacuum Pumps (2 year OTC), ELIMINATOR® Vacuum Pumps (2 year OTC), and PLATINUM® FLEX Vacuum Pumps (1 year OTC). OTC Warranty is limited to manufacturing defects and is VOID if the problem has been determined to be caused by abuse or misuse.

## VACUUM PUMPS: 1 AND 2 YEAR OTC WARRANTIES

All warranty statements apply to the PLATINUM® (2-year OTC), PLATINUM® FLEX (1-Year OTC), and ELIMINATOR® (2-year OTC) pumps.

JB Industries vacuum pumps are warranted to be free of defects in materials and workmanship for period indicated from the date of purchase. This warranty applies to all repairable instruments that have not been tampered with or damaged through improper use including unauthorized opening of the unit.

Pumps received within warranty period are assessed upon arrival at the JB Industries facility to determine warranty coverage. Wholesaler will be notified of warranty coverage determination. Over-the-counter warranty applies only to manufacturing defects and is VOID if determination has been deemed tool misuse.

To eliminate unnecessary returns and/or costly repairs, verify oil has been changed, and proper pump operation guidelines have been followed prior to requesting a Return Goods Authorization (RGA) number.

### NOT CHANGING OIL WILL VOID WARRANTY

#### CHECK FOR SIGNS OF MISUSE

- A. Housing area
- B. Broken base
- C. Trap
- D. Damage to fins or drain valve
- E. Sight glass
- F. Damage or dents to pump body
- G. Broken or bent handle
- H. Damaged or missing intake valve

#### REASONS FOR VOID OF WARRANTY

- Improper usage of pump and pump oil
- Oil has not been changed
- Corrosive substances and/or contaminants found in pump
- Pump has been damaged, altered, or components have been removed or are missing

#### PACKING VACUUM PUMP FOR RETURN

To ensure that no additional charges are incurred due to improper packaging:

1. Drain **all** oil from pump and close off valves.
2. Place pump in a sealed plastic bag.
3. Package pump in a cushioned bottom carton with packing paper. Be sure to secure and protect pump in carton on all sides. Do not use packing peanuts.
4. Include RGA number issued by JB Industries and supporting paperwork with detailed description of issue in a sealed, separate plastic bag.
5. If an estimate is required, be sure to specify in documentation and include contact information (name/address/phone/email).

## F6-DP: 3 YEAR OTC WARRANTY

JB Industries warrants the F6-DP Refrigerant Recovery Machine to be free from defects of materials or workmanship for three years from the date of purchase. JB Industries does not warrant any machine that has been subjected to misuse, negligence, or accident, or has been repaired or altered by anyone other than JB Industries.

The compressor is warranted for a period of three years by the manufacturer. To keep this warranty in force, a filter (included) must be used on the inlet port or hose at all times to prevent particulates from entering the compressor. Failure to use the included filter will void the compressor warranty.

JB Industries liability is limited to repairing or replacing, at its option, a defective machine or part. If a defect arises, a valid claim must be received by JB Industries, with transportation prepaid, no later than thirty (30) days after the warranty period expires. JB Industries will determine whether the machine has malfunctioned due to defective materials or workmanship.
