**NOTE:** Twin Disc Check Valves can be installed horizontally or in the vertical position with flow up.

**CAUTION:** For horizontal flow applications, the valve must be installed with disc hinge pin in the vertical position, to insure proper operation.

- WARNING:**
1. Seat end of valve must be mated to a standard flat faced metal flange. Rubber flanges not acceptable.
  2. These are not to be used as steam valves.
  3. Valves are not to be used near a reciprocating air compressor.

**Note:** On pump discharge, the preferred check valves are:

- inline, spring assisted, center-guided, lift checks
- spring assisted twin (double) DISC
- SWING DESIGN WITH LEVER AND WEIGHT OR LEVER AND SPRING

Install 5 pipe diameters minimum downstream from pump discharge or changes in direction to avoid flow turbulence. Flow straighteners may be required in extreme cases.
