When you look at your window-mount air conditioner, you will see louvers on the sides and/or top. These are designed to bring in fresh air that is then directed across the coils inside the unit. It is important that the air conditioner be correctly installed, especially leaving the side louvers and back grille unobstructed.

The chart on the last pages of this catalog shows the maximum thickness of the wall through which the air conditioner should be installed. These widths assure that the side or top louvers will be unobstructed so that adequate fresh air is available for heat transfer to occur.

Double Hung Window

Each carton shows the minimum and maximum size of the window in which that specific unit will fit.

Measure the width of the window opening and the maximum height when the window is open to determine if the unit you've chosen will fit the available window, in addition to checking the wall thickness.

Window-mount air conditioners come with adjustable side panels that slide open to completely fill the window opening; allow 3 to 4 inches of width for the accordion-type side panels to open. The window sash closes onto the bracket located on the top of the air conditioner.

IMPORTANT: Because so much of the weight of the air conditioner is on the outside, it is necessary to have a support bracket installed for safety. See page 6 for details on our two sizes of support brackets.

Portable Dehumidifiers

- **Automatic Water Level Shut-Off**—When the drain bucket is full, the unit automatically shuts off
- **Drain Options**—Condensed water can be collected in the removable bucket that has a convenient handle, or continuously drained using an adapter
- **BHDP Models**—Built-in pump quickly and effectively removes condensate
- **Easy to Use Controls**—All controls are located on the top of the unit so they're easy to see and adjust; actual room humidity/relative humidity set point is displayed
- **Auto Restart**—Automatically resumes operation after a power outage
- **Slide-Out Filter**—can be cleaned and reused; check filter light is a reminder when it's time for cleaning

Ductless Mini-Split Systems

Multi-Zone Mini-Split Heat Pumps—Inverter Technology

Cool and heat one to five separate rooms or areas, depending on the capacity of the outdoor unit. Each zone has an independently controlled air handler with remote; ceiling cassettes and ducted units also have a wired wall thermostat. Built with enhanced filtration, quiet operation, multiple modes, low ambient cooling and “Follow” function.

Mix ‘n’ match indoor units

May be sized up to 150% of outdoor unit capacity, but may not provide full capacity for all indoor units. Total capacity of all indoor units should not be less than 50% of the outdoor unit’s capacity.

Mix & match indoor units up to maximum capacity of outdoor condenser!

Mini-splits are the ideal solution for areas where adding ductwork is too expensive or impractical, such as older homes, additions, sunrooms, warehouse office spaces, computer rooms, sports arena skyboxes, and more. Comfort-Aire offers a complete line of ductless mini-splits, including high efficiency single zone and multi-zone units that allow each room to be individually controlled to meet specific requirements and save energy when the room isn't being used:

- **Single Zone**—9,000 to 24,000 BTUH, one outdoor unit and one indoor air handler, one remote control. cooling only and heat pump models. Inverter technology

- **Single Zone Inverter**—9,000 to 36,000 BTUH, one outdoor unit and one indoor air handler, one remote control; inverter technology. Heat pump only.

- **Multi-Zone Inverter**—Mix and match indoor units to condition 1 up to 5 zones (depending on capacity of outside model); 18,000 to 42,000 BTUH. Inverter technology. Available in heat pump only. One remote included for each indoor unit.

- **Condensate Dispersal System**—“Slinger” system throws condensation onto the condenser coil for evaporation
- **Electronic Thermostat Control**—LED display makes it easy to select set point
- **Modes**—Cool, fan only and auto; heat pump models alternate between reverse cycle heat mode and electric heat mode
- **Compressor Restart Time Delay**—Prevents short cycling of the compressor
- **Freeze Protection**—Automatically activated when needed to keep the evaporator from freezing
- **Memory**—Restarts operation in the mode that was operating when power was lost
- **Fits Most Wall Sleeves**—Matching wall sleeve and grille available as optional accessories
- **Electric Heat**—Designed for supplemental heating only, automatically switches to electric heat when the temperature reaches 44° F or below

7,000 to 15,000 BTUH

**Dimensions:
42"W x 16¹/₁₆" H x 21¹/₁₆" D**

**Electric Heat Standard—3 kW on
7K & 9K, 3 or 5 kW on 12K & 15K**

Also available in 265V models, see brochure CA-PT-15A

Guidelines from www.energystar.gov

Energy Star recommends increasing capacity by 10% for a sunny room, decreasing by 10% for shaded room.

If used in a kitchen, add 4,000 BTUHs to the total.

If more than two people regularly use the room, add 600 BTUH for each additional person.

IMPORTANT!

Always wait to cut an opening until the unit arrives and dimensions can be verified.

The Quality Leader in Conditioning Air

For three-quarters of a century Heat Controller, has provided quality products for conditioning air. Founded in 1933, the company can trace its roots to the Wingert Furnace Co. which began building coal, gas and oil furnaces in Montpelier, Ohio, in 1907. In 1955 the company moved to a new facility in Jackson, Michigan, and a new focus was placed on room air conditioners and dehumidifiers under the Comfort-Aire® brand name.

Heat Controller is known throughout the industry for efficient, reliable products and in-season availability. Whether for heating or cooling, these products meet or exceed industry standards for energy efficiency. Added to that, the line is constantly being updated to add the features and new technology customers demand.

Due to ongoing product improvements, specifications and dimensions are subject to change and correction without notice or incurring obligations. Determining the application and suitability for use of any product is the responsibility of the installer. Additionally, the installer is responsible for verifying dimensional data on the actual product prior to beginning any installation preparations.

Incentive and rebate programs have precise requirements as to product performance and certification. All products meet applicable regulations in effect on date of manufacture; however, certifications are not necessarily granted for the life of a product.

Therefore, it is the responsibility of the applicant to determine whether a specific model qualifies for these incentive/rebate programs.

REST ASSURED: VALUE-ADDED PROGRAMS
