In addition to Josam Company's complete line of quality cast iron and PVC specification drainage products, we are also pleased to offer the following product lines.

Push-Fit Stainless Steel Drainage System

- Pipe and fittings manufactured of austenitic grade 316L stainless steel
- A gasketed "Push-Fit" design resulting in cost effective installations
- Pipe and fittings in sizes 1-1/2" through 8" pipe size
- Specific gasket materials to suit different product applications
- Pressure ratings that are at least 4 times higher than previous generation systems
- Capable of being used in vacuum systems

Complete Line of Stainless Steel Drains

Manufactured by ATT inox

- 8", 10" and 12" adjustable and non-adjustable round top floor drains
- 6", 8", 10", 12" and 16" adjustable and non-adjustable square top floor drains
- 2" through 8" no-hub outlets for easy connection to existing piping
- 6", 8", 12" and 16" wide trench drains
- Grates for the lightest to heaviest of loads
- 5/16", 3/4" and 3" slot and mini channels
- Ability to customize products to suit individual requirements

Complete Siphonic Roof Drainage System

- A complete system including "Push-Fit" galvanized pipes, fittings and drains
- Josam support in calculating the siphonic size requirements for a balanced system
- Space gained due to horizontal piping without slope below the roof deck
- A higher discharge rate as a result of closed flow circuit allowing smaller pipe sizes
- Less labor cost due to fewer vertical pipes and less pipe penetrations

Pro-Plus Trench Drain System

- SMC/GRP Construction
- Available with and without slope
- 4", 8" and 12" nominal interior widths
- Lightweight - 70% lighter than polymer concrete
- 1.5 times stronger than polymer concrete
- Load class A-E

Information and access to pricing and literature on all of these products is available at www.JOSAM.com. Should you require further details please contact your local Josam representative or Josam directly.

Introduction

This Josam Installation Guide is a dimensional and installation reference guide for use in the field or in the office. It contains details, specifications and roughing dimensions for all Josam Plumbing Drainage Products. All designs, descriptions and dimensions are subject to change without notice.

PRODUCT DESIGNATIONS—Each product is designated by a series number. For drainage products, the last digit in the type number indicates the pipe size. For Hydrants the type number typically indicates wall thickness, for shock absorbers the type number is based on fixture units and for interceptors the type number is based on volume or size. Outlet types are indicated by suffixes to the type number. Please specify –T for threaded, -X for inside caulk, -Y for hub outlet with gasket for 2-4” sizes and –Z for no-hub. Alpha or numeric options are added to the type number and many commonly used options are depicted on separate submittal drawings.

ALPHABETICAL INDEX—The following index will help you to locate specific products when you do not know the product series number.

SUBMITTAL DRAWINGS—This guide is arranged in numerical order by product categories in the numerical ranges shown below. Additional option or installation information is provided at the beginning of the product sections.

MATERIALS & FINISHES

Materials

BRONZE:

JOSAM bronze is a semi-red brass, generally used with a satin finish and is also an excellent base for chromium plating. All JOSAM chromium plated bronze is cast with this alloy and results in a lasting bright appearance which is stain resistant and maintenance free. Use of bronze instead of cast iron may reduce load classification.

CAST IRON:

JOSAM gray iron is produced to ASTM Standards and has a 25,000 p.s.i. minimum tensile strength. The use of quality materials and the most modern production methods results in sound, dependable metal with good corrosion resistance.

DUCTILE IRON:

A nodular graphite iron with the strength of steel is supplied for gratings, which must carry the heaviest loads.

NIKALOY:

This nickel bronze alloy is used when a high strength harder bronze material is needed for chemical resistance and a long-lasting, easily-maintained bright finish. Use of Nikaloy instead of cast iron may reduce load classification.

ACID-RESISTING COATINGS:

Floor Sinks are provided with an acid-resisting porcelain enameled or high-gloss baked epoxy sanitary acid-resisting white coating that has an excellent appearance and is easy to clean. The acid-resisting coating provided on other cast iron and steel products is a two-part epoxy coating.

STAINLESS STEEL:

Stainless steel is commonly used in the dairy, food processing, chemical, pharmaceutical and institutional industries. Available in type 304 and 316L stainless steel.

PLATING AND SPECIAL COATINGS:

JOSAM bronze is often chromium plated for ease of maintenance and resistance to chlorine. All JOSAM cast iron is dip coated with a quality paint and, when required, special chemical-resistant coatings are furnished for harsh environments. Galvanized coatings are supplied by a new zinc-rich polymeric coating. This finish conforms to Mil. Spec. MIL-P21035 and is preferred to hot dipped coatings.

Finishes

ROUGH:

This designation applies to Nikaloy and bronze items, which are supplied in an "as cast" condition. All of the features of Nikaloy and bronze are present.

PAINTED:

JOSAM's protective coating is a water-reducible air-dry enamel paint.

SATIN:

Low luster finish applied to Nikaloy and bronze products makes them compatible with the present architectural trends calling for exposed hardware to be inconspicuous in appearance. This satin finish has been selected by JOSAM to be standard on all Nikaloy and bronze finished parts.

INSTALLATION OF OFF-THE-FLOOR FIXTURES

Many factors, including cost, material, labor required, space, handling and others must be thoroughly evaluated when planning an installation. With on-the-floor water closets, slabs must be penetrated and sleeved at each fixture to accommodate waste piping which, in many instances, has to be suspended below the slab.

Such suspended piping requires concealment in multi-story installations, thereby necessitating drop or furred ceilings in the rooms below. The fitting and assembly of waste piping in such installations, as a rule, must be accomplished on the spot with the aid of scaffolding and extra mechanics, which contributes to high construction costs and affects not only the mechanical contractor but the structural, floor, wall and ceiling mechanics as well.

Conversely, with off-the-floor fixtures, there is no slab penetration in toilet room areas. The support and piping systems are concealed behind the walls. Such systems are ideally suited to the modern modular plumbing concept as they are readily fabricated either on site or in the contractor's shop at significant savings over conventional piece-by-piece assembly. A well planned and executed off-the-floor fixture installation today will provide lasting benefits appreciated by future building occupants and owners.

ON-THE-FLOOR WATER CLOSET

OFF-THE-FLOOR WATER CLOSET

Horizontal Fitting & Carrier Selection

DIAGRAM TO DETERMINE LEFT- OR RIGHT-HAND CLOSET FITTINGS

1. If flow in waste line is **from the right of the stack**, the closet fitting should be a **right-hand fitting**.
2. If flow in waste line is **from the left of the stack**, the closet fitting should be a **left-hand fitting**.

Extension Length Determination

This is a side view. The enlarged inset shows the depth of the gasket within the groove of the fixture and the extension with proper pressure on the gasket.

When the closet is installed on the carrier, the front end of the extension must be located properly in order to compress the gasket enough so that the gasket's adhesive coated surfaces are in contact with the china and the face of the extension. This will help ensure a tight seal.

For closets which have a groove with a rectangular cross-section, use this formula: $C = A + B - 1/2''$

Where: A = Distance from Closet to Wall B = Depth of Groove in Closet C = Distance Extension Extends from Wall

For closets which have a groove with a V-shaped cross-section:
Use the above formula, but an additional 1/8" (or more) may be added to C.

SIPHON JET

This type, because of its quiet, efficient, sanitary flushing action, is usually specified in most commercial, institutional and hotel applications. Water is introduced into the bowl through the rim and up leg of trap through jets placed there to fill the trapway thus creating siphonic action to quickly evacuate the bowl. The large water surface in the bowl insures sanitation.

BLOWOUT

This type is particularly suited to heavy use applications such as public facilities in stadiums and terminals. The flushing action produced by the jet of water in the outlet passage is strong for rapid evacuation of the bowl. Fouling problems are minimal. However, because of the powerful flushing action, this type of closet is noisy to operate.

ONE CARRIER FOR SIPHON JET OR BLOWOUT

CHASE-SAVER® is shipped pre-assembled for siphon jet closets and is quickly inverted for use with blowout closets.

12000 -PF

SPECIFICATION: JOSAM 12000-PF Series coated cast iron CHASE-SAVER® II Closet Carrier with adjustable connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFFEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.

12000 -OR

SPECIFICATION: JOSAM 12000-OR Series coated cast iron CHASE-SAVER® II Closet Carrier with adjustable connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFFEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.

-32 WIDE CHASE CLOSET CARRIER

SPECIFICATION: JOSAM -32 coated cast iron Wide Chase Closet Carrier with adjustable closet connection, adjustable pylon feet, ABS extension with integral test cap, chrome plated trim, coated accessories and JIFFEE-SEAL Neoprene fixture gasket, for use with blowout or siphon jet water closets.

-32 NIPPLE SELECTION

-32 OPTION RECOMMENDED LENGTH NIPPLES (BY OTHERS)

A* Minimum Chase	Length Nipple to Use
9-1/4	2-7/8
10-1/4	4
11-1/4	5
12-1/4	6
13-1/4	7
14-1/4	8
15-1/4	9
16-1/4	10
17-1/4	11
18-1/4	12

Recommended Pipe: 4" Galvanized Steel

NIPPLE LENGTH DRAWING

To provide proper fixture support, the carrier should be set directly behind or within the wall. To accomplish this in wide pipe chases with DWV piping either centered or offset, it is necessary to separate carrier and drainage fitting as required with nipples that are longer than 2-7/8." The minimum dimension (A*) was determined using a 2-7/8" length nipple. Nipples ranging in length from 2-7/8" to 12" in 1 inch increments are identified on this page for specification when such construction conditions are encountered.

12000 Minimum Dimensions

12000-32 Minimum Dimensions

* MAY VARY ± 1/4"

ADJUSTABLE EXTENSIONS AVAILABLE FOR -32 OPTION

Wall Thickness	Length of Extension	Length of Threaded Rod	ABS Extension Part No.
1" through 5-1/2"	7"	9-1/2"	07095A
5-1/2" through 10-1/2"	12"	14-1/2"	07095E

(-AUX) OPTION, 2" AUXILIARY INLET

The 2" auxiliary inlet is for applications with back-to-back bathrooms where the ladies room has a water closet carrier and the mens room has a urinal carrier. (Available on 12674 and 12684 Series.)

(-VP) OPTION, VANDAL-PROOF TRIM

The JOSAM Vandal-Proof trim is designed to prevent tampering and possible damage to the fixture caused by vandalism. The Vandal-Proof trim can be used in place of the regular JOSAM cap nuts. Trim is installed using a hex key. After installation is complete, chrome plated expansion plugs which match the nuts, snap into place minimizing the chances of vandalism.

(-1) OPTION, TRU-SET POSITIONING FRAME (Siphon Jet Closets Only)

Made of high impact polystyrene, the TRU-SET Positioning Frame offers many advantages to the plumbing contractor. The positioning frame is mounted on the carrier studs at the time the carrier is being installed, thus it acts as a guide and template, eliminating problems caused by normal dimensional variations when the wall is being erected. Studs and adjustable extension are set to the frame, eliminating further adjustment when the fixture is being hung. Chances of bowl breakage are minimized since bowl is held the correct distance from finished wall.

NOTE: Sold only with JOSAM closet carriers.

(-6) OPTION, SUPPLY PIPE SUPPORT

Support assembly attaches to an upper carrier mounting stud and securely holds water supply pipe running to the flush valve. This hanger prevents movement of water piping during and after construction, protecting piping as well as the flush valve. When ordering, specify type of pipe to be supported.

ILLUSTRATION A

ILLUSTRATION B

(-24) OPTION, FOR FLOOR-MOUNTED BACK-OUTLET CHINA CLOSETS

This option adapts adjustable as well as other types of fittings for securing floor-mounted back-outlet China closets. Any adjustable fitting is adapted as shown in Illustration A. Other types of fittings are provided with bosses to attach the closet securing studs at the correct dimensions for this type of closet. See Illustration B.

(-35) OPTION, CLOSET CARRIER FOR WHEELCHAIR HIGH ROUGH

This optional carrier can be used with all adjustable fittings. When used with blowout closets over 12 1/2", **specify -M1358.**

-PAF OPTION, PRE-FAB ADJUSTABLE FEET

These optional feet can be used with 12000-OR, 12000-CR or 12000-PF faceplates. Feet are designed to be attached to angle iron or unistrut for pre-fab construction.

12000-OR WRENCH

Use 12000-OR wrench to apply forward pressure as you thread extension into 12000-OR faceplate.

BOWL TO CARRIER INSTALLATION

FH Hardware Part #: 565985T
Mounting Stud and Back-up Nut
not included in FH Hardware Kit.

To set bowl using finished hardware group "FH," put a hex nut, back-up washer, and a bowl stabilizer on each mounting stud.

Adjust with front of back-up nut and washer at finished wall line.

If the back-up nut and washer are moved to clear irregularities in the finished wall, the extension **MUST** be adjusted an equal amount.

Place fixture gasket in toilet outlet and hang closet. Assemble fiber washers and JOSAM cap nuts to two studs on the center line of the closet outlet and one other stud below and tighten with a wrench.

Assemble fiber washer and JOSAM cap nut to remaining stud, hand tighten and take 1/2 turn with a wrench.

Installation of back-to-back 12000-PF Series Adjustable Carrier showing minimum extension.

Installation of 12000-PF Series Adjustable Carrier in a standard 12" wide pipe chase showing minimum extension.

Installations 90° Double Waste Fitting 15964 & 15984 Series

Installations of 15964 and 15984 Series double vertical 90° no-hub fittings where a closet and lavatory are installed in each room with one stack serving two rooms.

15964 SERIES SHOWN IN A TYPICAL ROOM BACK DISCHARGE TOILET FACILITY

15984 SERIES DOUBLE WASTE VERTICAL FITTING SHOWN INSTALLED IN A TYPICAL ROOM BOTTOM DISCHARGE TOILET FACILITY LAYOUT

SPECIFICATION:

JOSAM SERIES 11001 COATED CAST IRON UNIVERSAL PIPE GRIP CLOSET CARRIER WITH 4" PIPE ADAPTER. ADJUSTABLE FEET AND FINISH HARDWARE AND TRIM TO SUPPORT SIPHON JET OR BLOWOUT WALL-HUNG WATER CLOSET. WASTE PIPING AND FITTING SUPPLIED BY OTHERS.

JOSAM COMPANY
MICHIGAN CITY, INDIANA

NOTES:

SPECIFICATION:

JOSAM 12714-HS-HD4 SERIES COATED CAST IRON SINGLE VERTICAL 4" HUB & SPIGOT FITTING DOUBLE 4" HUB & SPIGOT BRANCH INLETS AND 2" HUB & SPIGOT RIGHT-HAND OFFSET VENT. ADJUSTABLE CARRIER BODY, INVERTIBLE FOR SIPHON JET OR BLOWOUT CLOSETS, WITH ABS EXTENSION WITH INTEGRAL TEST CAP, PYLON FEET, ANCHOR FOOT, PLATED HARDWARE AND NEOPRENE FIXTURE GASKET.

CLOSET CARRIER VERTICAL W/ RIGHT HAND VENT

SERIES

12714-HS-HD4

FORMERLY 12294A SERIES

▲ FOR DIMENSION SHORTER THAN 5-1/2" (1" MIN) CUT EXTENSION. FOR LONGER EXTENSION (10-1/2" MAX) SPECIFY (-10)

■ RECOMMEND FEET BE SECURED TO FLOOR WITH 1/2" BOLTS AND ANCHORS (BY OTHERS).

⊗ FOR SIPHON JET ROUGHING OVER 6" OR BLOWOUT ROUGHING OVER 12-1/2" SPECIFY ON ORDER.

SIPHON JET DIMS SHOWN. FOR BLOWOUT DIMS, USE:
⊕ MIN 11 & MAX 16-1/2"

- 6 SUPPLY PIPE SUPPORT (SPECIFY TYPE OF PIPE)
- 10 ABS EXTENSION THROUGH 10-1/2" WALL
- 24 FLOOR MOUNTED BACK OUTLET CHINA BOWL
- 30 CAST IRON ADJ. EXTENSION W/ CONNECTOR
- 30-2 CAST IRON ADJ. EXTENSION W/ CONNECTOR & TEST CAP
- 32 CARRIER FOR WIDE CHASE INSTALLATIONS
- 35 CARRIER FOR WHEELCHAIR HIGH ROUGH

SPECIFICATION:

JOSAM 12724 SERIES COATED CAST IRON DOUBLE VERTICAL 4" NO-HUB ON STACK FITTING WITH 2" NO-HUB OFFSET VENT. ADJUSTABLE CARRIER BODY, INVERTIBLE FOR SIPHON JET OR BLOWOUT CLOSETS, WITH ABS EXTENSION WITH INTEGRAL TEST CAP, PYLON FEET, ANCHOR FOOT, PLATED HARDWARE AND NEOPRENE FIXTURE GASKET

CLOSET CARRIER VERTICAL BACK-TO-BACK

SERIES

NOTES

□ THIS CARRIER CAN ALSO BE USED WITH A 4X4X3 TEE.

JOSAM RECOMMENDS FEET BE SECURED TO FLOOR WITH 1/2" BOLTS AND ANCHORS (BY OTHERS).

CONCEALED TYPE LAVATORY CARRIER

1. Tandem keepers in slots on the arm permit positioning of leveling screws on the job to suit punchings of any lavatory specified.
2. Screws in keepers can then easily be moved up or down to level the lavatory.
3. The securing lock device is positioned on the arm and tightens against the fixture to hold it rigidly in place.
4. The sleeve can be adjusted to suit various wall thicknesses.
5. The final setting of the arm out from the wall can be made from the face of the finished wall after the wall is built.
6. The set screws are easily accessible for quicker adjustment.
7. Arm with the locking device, tandem keepers, and adjustable sleeve, is completely assembled at the factory.
8. Hardware is plated to prevent corrosion.

Parts & Details Lavatory, Sink & Urinal Carriers

The drawings on this page show the relationship between mating parts of carriers covered in this section.

(-66) OPTION, SPLIT HEADER FOR STAINLESS STEEL ARMS

In many cases arms are supplied by the manufacturers of stainless steel fixtures. The mounting hole spacing in the back of the arm (Y Dim.) varies widely by sink and manufacturer. The -66 split header is adjustable to allow for the mounting of this type of sink and arm combination.

(-75) OPTION, 2" ESCUTCHEONS

(-76) OPTION, 4" ESCUTCHEONS

Escutcheons provide manufacturers' specified distance from wall to back of a slab type lavatory to prevent water from deteriorating finished wall when concealed arms are used. Furnished in polished chrome.

(-77) OPTION, 6" ESCUTCHEONS also available.

NOTES

Installing JOSAM Products Using the JIFFEE-JOINT Gasket.

1. Set drain body to the proper height over pipe.
2. Level and support in place.
3. After coating gasket and inside of drain with a gasket lubricant, slip gasket over pipe and press down as far as possible by hand.
4. Placing a caulking tool in groove at top of gasket, drive the gasket down flush with the pipe top – no further. You have made a perfect joint.

(-1) OPTION, DECK CLAMP

The deck clamp is the most dependable means by which the roof drain can be secured to the roof deck to insure a permanent bond that will prevent damage of flashing and membrane materials caused by movement and vibration. It is secured to the underside of the drain body with heavy-duty threaded rods, which provide adjustment to accommodate various slab or deck thicknesses, and is drawn tightly in place against the underside of the deck to form a positive union.

(-2) OPTION, DRAIN RECEIVER

The drain receiver is recommended for use in all roof drain installations regardless of deck construction and is of particular importance when used in conjunction with drains installed in decks where support is on insulation. The drain receiver is produced in heavy gauge steel, coated for protection, and embodies a recessed flange to carry the drain, and a wide flange to support the assembly on the roof. The drain receiver distributes the weight of the roof drain evenly over the deck and compensates for irregular and misaligned deck openings.

(-3C) OPTION, DRAIN RECEIVER & DRAIN RECEIVER CLIPS

Includes (-2) Optional Drain Receiver and clips, to secure the roof drain body directly to the receiver. Simply position the drain outlet face up, position drain receiver over the drain body and attach the four receiver clips with the hardware provided. Invert body and install the assembly into the deck opening. If necessary, secure assembly to the metal deck with self-tapping screws (by others).

(-10) OPTION, FIXED EXTENSION COLLAR USED WITH LEVELEZE® DRAINS

For roof or deck construction where base slab to surface height is greater than can be accommodated with the standard LEVELEZE® collar, the (-10) Fixed Extension Collar "A" is used along with the (-AE) LEVELEZE® assembly. These collars can be used in multiples where extension requirements dictate. The Fixed Extension Collar can be cast in increments of 1, 2, 3 and 4 inches. Shorter or longer dimensions are available by cutting or stacking extensions

(-VP) OPTION, VANDAL-PROOF SECURED DOME

Where vandalism or mischievous activity is anticipated, it is advisable to specify vandal-proof domes on roof drains. All JOSAM precision-molded plastic large domes incorporate bayonet locking devices as standard equipment; however, when specified vandal-proof, they are further secured with screws to insure permanence of assembly. Other types of domes can also be vandal-proofed when specified.

PIPE SIZE	A	B	C
2	2-1/2	4-1/2	3-5/8
3	2-13/16	5	4-1/2
4	3-1/2	5-1/2	5-11/16
5	4-5/16	6-1/2	6-15/16
6	4-13/16	7	7-15/16

(-66) NO-HUB SIDE OUTLET

This option converts JOSAM bottom outlet inside caulk drains to no-hub side outlet drains using a 90° no-hub quarter bend and a JIFFEE-JOINT Gasket.

STANDARD ADJUSTABLE LEVEZEZ ASSEMBLY (-AE)

INSTALLATION INSTRUCTIONS

- 1.) PLACE FLAT GASKET WITH HOLES ALIGNED ON DRAIN BODY
- 2.) SECURE SUPPORT RING ON TOP OF GASKET WITH 3/8" WASHER HEAD BOLTS.
- 3.) ATTACH WEJLOC CLAMP RING TO ADJUSTABLE COLLAR WITH 3/8" STUDS, SECURE CLAMP RING DOWN WITH 3/8" NUTS AND WASHERS

USING #21500 SEAL KIT 3 SEALING INSTRUCTIONS

- 1.) SURFACES MUST BE CLEAN AND DRY
- 2.) COMPLETELY FILL THE SEALANT WELL BETWEEN ADJUSTABLE EXTENSION AND THE SUPPORT RING TO FORM WATERPROOF SEAL.
- 3.) SEALANT SKINS IN 5 MINUTES, DRIES TO TOUCH IN 1 HOUR CURES & BONDS IN 24 HOURS

FAILURE TO FOLLOW INSTRUCTIONS MAY RESULT IN LEAKAGE.

ADJUSTABLE LEVEZEZ ASSEMBLY WITH OPTIONAL (-4) SECONDARY CLAMP RING

WHEN (-4) SECONDARY CLAMP RING IS USED WITH A (-10) FIXED EXTENSION, THE (-10) FIXED EXTENSION MUST BE LOCATED ABOVE THE (-AE) ADJ. EXTENSION.

Replacement Parts

Josam introduced the first non-puncturing clamping device for roof drains in the 1920's. By casting lugs into the body and flat tabs onto the clamp ring, the membrane could be clamped between the drain body and clamp ring using the 410 Clamp Posts. The original design can be identified in the field by the use of these clamp posts to secure the body to the clamp ring. The 410 and 4110 Series replacement parts below are for use with these original drains. Please use these drawings to check dimensions carefully as replacement parts are not returnable.

<p>NOTES</p>																												

WEIGHT LOADS

Apart from their primary purpose of receiving and conveying liquids, floor drains, as integral components of the floor, must be structurally suitable to withstand the anticipated loads that will be imposed on the floor. Weight support requirements of the drain vary with the location, construction, and service condition. The top loading classifications as published in Floor Drain Standard ANSI A112.21.1M-1980 are as follows:

- Light-Duty**— All grates testing under 2000 lb. (900 kg.).
- Medium-Duty**— All grates testing between 2000 lb. (900 kg.) and 4999 lb. (2250 kg.).
- Heavy-Duty**— All grates testing between 5000 lb. (2250 kg.) and 7499 lb. (3375 kg.).
- Extra Heavy-Duty**— All grates testing between 7500 lb. (3375 kg.) and 10,000 lb. (4500 kg.).
- Special-Duty**— Grates testing over 10,000 lb. (4500 kg.) should be considered special and treated accordingly.

When the top loading requirements for a drain have been determined, the duty type needed can be resolved. Selection is easily accomplished as all JOSAM Floor Drains are classified according to duty type in this section. For specific detail loading data, contact JOSAM Engineering.

PEDESTRIAN GRATE

HEAVY-DUTY GRATE

MEDIUM-DUTY GRATE

-44 Option, Fixed Extension Collar

ORDERING INFORMATION

To specify or order a fixed extension collar with floor drain, add Option (-44) and height required to type number of drain.

Example: Type 32103 with a 6" extension would be designated:
Type 32103 (-44)-6".

SERIES NO.	B In	D In	E In
32100, 32150, 32160	9-1/8	8-1/8	2
32200, 32300	12-5/8	11-3/4	2

(-AE) Option, LEVELEZE® Adjustable Extension

The adjustable integral top is mated to the body and support ring with a heavy machined thread which permits virtually unlimited top level adjustment to accommodate various deck thicknesses. The line contact between the threads provides positive circumferential support of the top at any adjusted elevation.

(-80) OPTION, PERFORATED STAINLESS STEEL BASKET

For use with all adjustable strainers to collect debris which may clog the waste line.

(-88) OPTION, SUPPLEMENTARY STRAINER

This option provides a secondary means of protection against blockage of drain lines. The openings in the supplementary strainer are smaller than the openings in the top grate, allowing it to intercept debris entering the interior of the drain. This option is primarily used in drains which don't offer a sediment bucket.

3000-WF6S Series SUPER-FLO® Adjustable Strainer Floor Drain shown installed in a composition deck floor. Wide flange assures that bonding of floor material is watertight and permanent.

32100-81 Series SUPER-FLO® Floor Drain shown installed in a medium-duty single-pour concrete floor supported by steel construction.

32100-AE-81 Series SUPER-FLO® Floor Drain shown installed in a poured concrete floor with floor finish. LEVELZE® Adjustable Collar provides vertical adjustment, facilitating installation and forming a perfect surface between top of drain and floor finish.

39600 Series Planting Area Drain shown in a typical installation providing drainage for an indoor planting area. Stainless mesh screen covered dome prevents entrance of dirt and gravel at the base of the planting area.

NOTES

55000 Series KLEENATRON® II ASSEMBLY

WIDE CHOICE OF COVERS

Tops and covers for every area. Round-square, tile-terrazzo, medium-special-duty. Standard cast iron secured cover has special-duty rating.*

***SPECIAL-DUTY:** Grates testing over 10,000 lb. (4500 kg.) ASME 112.6.3-2001.

ADJUSTABLE BUSHING

Precision machine threaded cast iron bushing provides LEVELEZE® adjustment; non-tilting top. Body protects threads from concrete, allowing adjustment after pour.

EASY IN – EASY OUT CLOSURE PLUG

ABS plastic closure plug with gas-tight sealing tapered threads.

OPTIONAL CLAMP RING

To secure waterproof membrane to flashing flange.

OPTIONAL (-F) FLASHING FLANGE

Mates with machined exterior thread on ferrule to provide watertight connection without the additional use of sealant by others.

CAST IRON BODY

With interior threads to provide unimpaired LEVELEZE® adjustment of top section.

SPECIFICATION:

JOSAM 55000 SERIES COATED CAST IRON KLEENATRON® II LEVELEZE® FLOOR CLEANOUT, INTERNAL ABS CLEANOUT PLUG, ADJUSTABLE CAST IRON HOUSING WITH SPECIAL-DUTY SCORRIATED SECURED ROUND CAST IRON COVER.

NOTES

60100H-GRD Series Interceptor on floor, servicing a sink, shown installed with an optional -GRD Grease Removal Device.

60100H-EXT Series Interceptor recessed with deep roughing extended flush with floor.

60100-SA-RT Series Semi-Automatic Interceptor recessed flush with floor, servicing a dishwasher.

60115A Series Interceptor installed on floor under sink.
(Recommended only if there is adequate head room for cover removal and service.)

60115-SA Series Semi-Automatic shallow Interceptor installed on floor, servicing a double compartment sink and dishwasher.

60210A-EGOLD Series Interceptor with factory installed Josam EGOLD-1000 Electronic Grease/Oil Level Detector for installation in high volume applications such as hotels, hospitals and schools.

INSTALLATION
60300 Series, GI 2000A
Automatic Grease Recovery Device

FLOW CONTROLS • ESSENTIAL FOR MAXIMUM EFFICIENCY

Flow control fittings are furnished at no extra cost with all JOSAM Interceptors and Separators. These devices govern flow rate to the interceptor or separator being used, thereby assuring the maximum retention of the material being intercepted.

The appropriate flow control will be shipped with every JOSAM Grease Interceptor or Oil Separator. They were designed after many years of tests and field experiments with interceptor installations under varying conditions and ensure 90% or more grease or oil retention efficiency of the interceptor.

When consideration isn't given to the flow rate of the waste water to be handled, generally the actual flow rate through the interceptor or separator exceeds its rated maximum. With such flow rate, the interceptor or separator would be overloaded. Retention time within the unit would not be sufficient for maximum separation. The result would be low efficiency and pollutants left in the waste water would pass through the interceptor or separator making the installation less than effective. When the flow is controlled by use of a JOSAM flow control fitting so that it can never exceed the maximum rating of the interceptor or separator, and the unit is cleaned on a regular basis, the maximum pollutant retention efficiency will be achieved and maintained.

All flow controls are provided with an air intake and should be connected to vent stack or vent not lower than the flow level of highest drain serviced or terminated in a return bend at the same elevation outside of building.

This table indicates which series flow control is furnished with the JOSAM interceptors or separators shown.

FLOW CONTROLS					
Series	Flow Control Series	Series	Flow Control Series	Series	Flow Control Series
60100-SA	60730	60110A	60730	60210A*	60710

NOTES

HYDRASAN I® HYDRANT MAINTENANCE

HYDRASAN® I will seldom require service. However, continuous drainage from the outlet is a signal that inspection and possible replacement of certain parts are in order. A self-contained tool, Actuator Rod (3), when reversed, makes the job easy. The procedure for removal and replacement of hydrant sealing parts is as follows:

- A.** Shut off water in supply line to hydrant, and turn hydrant on to relieve pressure.
- B.** Use pliers. Firmly grip Cap Retainer (8) and turn counterclockwise to remove it, then remove Deflector Cap (7). Shut off hydrant as tight as possible with Control Key (1) and use an adjustable open end wrench or channel-lock type pliers to “break” Draw Nut (11) loose, then remove it with Control Key (1), turning counterclockwise until threads are free from Hydrant Head (12). Grasp Draw Nut (11) firmly and pull toward you to remove Actuator (2) and Actuator Rod (3).
- C.** Loosen Set Screw (13) with a $\frac{3}{32}$ ” hex. key and separate Actuator (2) from Actuator Plug (21) on end of Actuator Rod (3).
- D.** Reverse Actuator Rod (3) and insert into hydrant as far as possible, using Control Key (1) secured to Actuator Rod (3) with Set Screw (14). With Actuator Plug (21) (hex.) on end of Actuator Rod (3) inserted in Hex. Hole (22) in Seat (15), which places Rod Extension (20) in Hole (23) in Shuttle (4), firmly rotate Control key (1) counterclockwise to unscrew Seat (15) and pull out entire Valve (15, 5 and 4).
- E.** Replace worn parts with new parts as required. Reassemble hydrant, reversing the procedure in Steps A through D to place it back in service. Be sure to make Cap Retainer (8) tight to prevent tampering.

NOTE: If pressure relief Valve “O” Ring (6) appears worn, it should be replaced when hydrant is apart. This part can be checked and, if necessary, replaced without turning off water supply to hydrant because the Pressure Assist Seal (Parts 4, 5, and 15) prevents any water from entering. This feature makes possible removal of all parts downstream (in front) of the Seal (or Valve) with water supply on.

Should it ever be necessary to service the Vacuum Breaker-Backflow Preventer in the outlet of HYDRASAN I, the procedure for removal and replacement of operating parts is as follows:

- F.** After Deflector Cover (7) has been removed (see Maintenance Step B), remove the four housing retaining screws with a $\frac{5}{32}$ ” hex. key and take off Outlet Housing (27). Lift out Vent Ring (28) and operating parts, Seal (29) Primary and Secondary Pistons (30 and 31). Inspect for wear.
- G.** Replace worn parts with new parts as required. Reassemble Vacuum Breaker-Backflow Preventer, reversing the procedure in Step F to place it back in service.

Service kits containing all parts necessary for this maintenance can be obtained through your plumbing supply dealer.

Parts Drawings, HYDRASAN® Non-Freeze

Hydrant replacement parts are available in Repair Kits only. Kits #6, #7, #8 and #23 apply to the Non-Freeze HYDRASAN® Hydrants depicted below. See page 270 for parts included in kits. For replacement rod assemblies, contact your local representative.

HYDRASAN® I 71000 & 71050 Series
NON-FREEZE

Parts Drawings, HYDRASAN® Mild Climate

Hydrant replacement parts are available in Repair Kits only. Kits #6, #9, #10 and #23 apply to the Mild-Climate HYDRASAN® Hydrants depicted below. See page 270 for parts included in kits. For replacement rod assemblies, contact your local representative.

Selection for Long Piping Runs

The majority of sizing and selection applications will involve single and multiple fixture branch lines. These are easily handled with Table IV. The remainder of applications involves individual runs of piping to a remote item of equipment. The properly sized water hammer arresters for such applications can be determined by Table V and Table V-A.

TABLE V
FOR WATER PRESSURES UP TO 65 P.S.I.G.

P.D.I. Water Hammer Arrester Sizes						
Length of Pipe	Nominal Pipe Diameter					
	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"
25	A	A	B	C	D	E
50	A	B	C	D	E	F
75	B	C	D	AE	F	EF
100	C	D	E	F	CF	FF
125	C	D	F	AF	EF	EFF
150	D	E	F	DF	FF	FFF

Ideally the flow pressure in branch lines serving fixtures should never exceed 60 P.S.I.G. Pressure reducing valves should be installed to maintain proper pressure. However, when flow pressures of 65 to 85 P.S.I.G. are used, the next larger size water hammer arrester should be selected. Refer to Table V-A.

All sizing data in this section are based on flow velocities of 10 F.P.S. or less. The certification testing was conducted with a velocity of 10 F.P.S. to offer assurance that P.D.I. approved units were capable of handling shocks of maximum intensity that may be encountered.

TABLE V-A
FOR WATER PRESSURES OVER 65 P.S.I.G. AND UP TO 85 P.S.I.G.

P.D.I. Water Hammer Arrester Sizes						
Length of Pipe	Nominal Pipe Diameter					
	1/2"	3/4"	1"	1-1/4"	1-1/2"	2"
25	B	B	C	D	E	F
50	B	C	D	E	F	CF
75	C	D	E	F	CF	FF
100	D	E	F	CF	EF	EFF
125	D	E	CF	DF	FF	BFFF
150	E	F	CF	FF	DFF	FFFF

When long runs of piping are employed to serve a remote item of equipment, the water hammer arrester should be located as close as possible to the point of quick closure. At this location, the water hammer arrester will control the developed energy and prevent the shock wave from surging through the piping system.

NOTE: For best performance results, the ABSORBOTRON® II should always be installed in an upright position and located as close as possible to the fixture or equipment closure valve.

SPECIFICATION:

JOSAM 75000 SERIES ABSORBOTRON II® SHOCK ABSORBER WITH STAINLESS STEEL SHELL. HYDRO-PNEUMATIC CUSHION OF NITROGEN, STAINLESS STEEL BELLOWS AND STAINLESS STEEL MALE THREADED PIPE NIPPLE.

TRAP SEAL PRIMER VALVE

INSTRUCTIONS

APPLICATION - INSTALLATION - OPERATION - MAINTENANCE

ITEM NO.	DESCRIPTION
1	Valve Seat
2	Poppet Assembly
3	O-Ring
4	Cap
5	O-Ring

APPLICATION

This valve, when properly installed in a cold water supply line and connected to a floor drain trap, will ensure a constant seal of fresh water in the drain trap. Frequently, without such a device, the water seal will evaporate from the trap and allow sewer gas and vermin to enter buildings from the sewer lines.

OPERATING PRINCIPLE

As water is drawn through the supply line by an appliance or water closet, the resulting flow tips the valve mechanism to one side which meters water from the supply line into the primer trap line. Water flow can be observed at the bottom outlet side slots. These side slots act as a vacuum breaker.

INSTALLATION REQUIREMENTS

1. Water lines to which the primer valve will be connected must be clear of dirt.
2. Primer valve must be mounted vertically with sufficient clearance above valve to remove Cap. Connect primer valve to a horizontal cold water supply line near the drain trap.
3. The pipe connecting the primer valve bottom outlet to the drain trap should be at least 1/2 in. inside diameter and must be vertically straight for at least one foot directly below the primer valve.
4. Elbows, tees and reducers must not be connected to the primer valve bottom outlet because they will cause water to flow out through the outlet side slots.
5. The Cap, Valve Seat, Poppet Assembly and O-Rings must be removed prior to any soldering that may be required.
6. Check all connections for leaks and repair as needed. No adjustments are required.

MAINTENANCE INSTRUCTIONS

1. Close supply line valve to shut off water pressure to the primer valve.
2. Remove Cap with a 1-1/4 in. hex wrench. Lift out Poppet Assembly.
3. Unscrew Valve Seat with a 5/8 in. thin wall socket wrench.
4. Insert new Valve Seat and O-Ring in Valve Body and tighten Valve Seat.
5. Place Poppet Assembly on Valve Seat. Small stem must extend into seat orifice.
6. Attach Cap and O-Ring to Valve Body and tighten Cap.

Open water supply line valve. Check for leaks around Cap. Observe flow of water into trap when water is flowing through supply line. No Adjustments are required.
