Installation Instructions

The Traditional Bathroom Collection Installation & User Guide

Congratulations on the purchase of your Perrin & Rowe bathroom product. Correctly installed and with sensible care, this product will give you many years of trouble free service.

IMPORTANT INFORMATION

Before you proceed... We recommend you engage the services of a registered plumber to install this product.

Perrin & Rowe taps require a maximum inlet pressure supply of 500 kpa (72psi). For installations where the inlet water supply pressure is ever above 500kpa, pressure-limiting valves must be installed prior to this tap.

It is essential that the information contained herein is carefully read and understood prior to installing and operating this tap.

Preparation for the installation

Flush the pipework before installing this tapware.

Once unpacked remove Trim Kit ready for installation.

•U.3560L •U.3561X

- Follow placement dimensions supplied for installation.
- When installing products make sure allowance is made for tiles etc.
- Cavity should be sufficient to allow for servicing of valves.
- Assemble nozzle rosette, fitting base seal supplied between rosette and wall finish.
- Fit nozzle onto shank using thread sealing materials sparingly.

Concealed Wall Valve

Ensure the handle is vertical when the valve is in the 'off' position.

- Assemble trim to rough ensuring handle is aligned correctly. If it is not, remove and turn a few splines until correct alignment can be achieved.

Use the above instructions to install the 3 Hole Lav Set on the next page.

Installation Instructions

•U.3560L •U.3561X •U.3605

The diagram illustrates the installation of the ROHL tap. It shows a side view of the tap assembly mounted on a wall. Key dimensions include a minimum hole diameter of 1/8 inch and a maximum of 3/4 inch, a total height of 3 inches, and a hole diameter of 1 3/4 inches. Labels include 'MIN 1/8" MAX 2 3/4"', '3"', 'Ø 1 3/4"', 'Ø 1 1/2" Hole', 'Trim', 'spout', 'Base Seal', 'Rough', 'Rosette', '1/2" NPT', and '1 1/4" MAX WALL THICKNESS'. A top view shows the 'OPEN' and 'CLOSED' positions of the handle, with 'LEFT VALVE' and 'RIGHT VALVE' configurations. The 'LEFT VALVE' configuration has 'No Groove' and the 'RIGHT VALVE' configuration has a 'Groove'.

OPERATION

- This tap is fitted with quarter-turn ceramic disc valve units. Water flow from off to fully on is achieved by rotating the handles a quarter-turn. Ceramic disc valves are available opening in a clockwise or anti-clockwise direction. Should the handle of an installed tap operate in the wrong direction, this can be remedied by changing the ceramic disc valve to the other version.

• Fit the handle in the correct position for when the valve is in the 'off' position and once you have correct alignment, screw the barrel clockwise to tighten it onto the valve. Slide the rosette along the barrel to tighten and against the wall. There is no o-ring between the rosette and the wall however a small amount of white putty or other removable sealant can be placed on the rear of the rosette. **Please do not seal with silicone as it will hamper the removal of the handle for future servicing.**

- Turn on the water supply and check the installation for leaks.
- If further building work is to be carried out in the vicinity, cover the tap to avoid plaster, paint etc damaging the finish.
- Please ensure that the installation complies with all plumbing regulations and codes

BEFORE USE

- Carefully check the installation for leaks.
- If further building work is to be carried out in the vicinity, cover the tap with a plastic bag to avoid damaging the finish.
- Please ensure that the installation complies with the local plumbing codes.

CARE & MAINTENANCE

- Occasional cleaning with warm soapy water, followed by a polish with a soft cloth is all that is required to keep the plated finish in good condition.
- If you wish to occasionally polish your tap and it has a Chrome, Nickel or Pewter finish, we recommend a gentle metal cleaner such as AUTOSOL metal polish, which is available from hardware and automotive parts stores.
- **Do not use any cleaners on Gold or English Bronze taps.**
- **Do not use proprietary abrasive liquids, powders, or pads to clean the product. You will damage the plated finish and void your warranty.**
