The corrosion protection system of a standard Apollo® pneumatic actuator consists of the following treatments or materials:

ELECTROPHORETIC FINISH ON SPRINGS

- Springs are protected from corrosion using an electrophoretic finish.

CHROMATE PRE-TREATMENT

- The housing and end caps get a chromate pre-treatment prior to coating. The pre-treatment takes care of a perfect bonding of the coating layer to the aluminum housing and gives additional corrosion protection to the bore of the housing.

POWDER COAT

- Polyurethane powder coating for exterior use.
- The powder coating is applied cold using automatic electrostatic spray equipment and is cured for about 10 minutes at a minimum of 200°C (392°F) offering excellent light and weather resistance.
- The powder coating thickness is between 80 and 160 microns (3.15 and 6.3 mils).
- Good chemical resistance against most bases, acids, solvents, alkalis, and oils at normal temperatures.
- Excellent exterior mechanical durability.
- The coating has passed a salt spray test according to ASTM B117 for 1,000 hours.
- The powder coating is virtually solvent free, and therefore environmentally friendly.

HIGH GRADE & HARD ANODIZED ALUMINUM PINION

- Actuators with high grade & hard anodized aluminum pinions have passed a 1,000 hours salt spray test.

STAINLESS STEEL OR DELTATONE® TREATED EXTERNAL STEEL PARTS

- External parts are stainless steel or steel alloy with a Deltatone® treatment for optimum protection and durability.

THE CHEMICAL AND DURABILITY ASSESSMENT

- All these components, treatments and finishes, including the durable pinion design, anodized surface finish, standard powder coat paint and stainless steel treated external fasteners shows no decline of actuator functions after 1,000 hours salt spray test.

Sizing is the selection procedure to select the right size of actuator on a valve with a given torque characteristic. The following information gives brief examples on how to size actuators and which data is needed.

TORQUE CHARACTERISTICS OF VALVES

Apollo[®] actuators are commonly used to operate butterfly, ball, and plug valves. The instructions below are intended for these types of valve applications, but can also be used for other quarter-turn applications.

GENERIC

TORQUE CHARACTERISTICS

VALVE TORQUE VALUES AND SAFETY FACTORS

Establish the valve operating torque beginning with the torque constants for the appropriate pressure and valve. Use the torque adjustment factors to arrive at an in-service torque. Multiple adjustment factors may be required. Do not forget to include adjustments for graphite stem packing.

DOUBLE ACTING

TORQUE CHARACTERISTICS

Based on the available air supply, select an actuator with torque outputs that exceed the in-service torque by at least 10%.

SPRING RETURN

TORQUE CHARACTERISTICS

Based on the available air supply, select an actuator where both the spring-ending torque and air-ending torque amount exceeds the in-service torque by at least 10%.

SPRING (CARTRIDGE) PLACEMENT

SIZES 0025 THRU 0600

Apollo® spring return actuators are supplied with springs on each end of the actuator. Throughout the size range, there are different spring designs:

- Size 0012 has only 1 spring per side
- Sizes 0025 thru 0600 have a maximum of 6 springs per side
- Sizes 0950 thru 4000 have a maximum of 3 springs per side

Notes:

1. Flange and square drive according to ISO 5211.
2. F25* = F or sizes 1600 and 2500 drilling pattern 9.240" x 3.827" represent 4 holes of a F25 drilling pattern.
3. Size 4000 has 2x inner square E1 in the pinion bottom instead of inserts.
4. Imperial threads are UNC for fastener thread holes and NPT for air connection ports.

KEY FEATURES

- Drive inserts allow actuators to be directly mounted to valves.
Eliminates the need for a bracket and coupling type mounting kit.
The use of drive inserts significantly cuts the cost of the valve/actuator assembly.
- Standard actuators are fitted with square drive inserts.
- Special inserts may have oversized/undersized squares or double-D configurations.

DESCRIPTION

- Standard actuators are fitted with square drives inserts in accordance with ISO 5211. The ISO 5211 standard covers parallel and diagonal oriented inner squares (as per the old DIN 3337 standard).
- Additionally, a wide variety of other inserts are also available. Special inserts may have oversized/undersized squares or double-D configurations.
- Drive inserts can be supplied on factory supplied actuators or as loose items and are easily replaceable.
- Material: aluminum alloy

Notes:

Actuator size 0012 does not have inserts. This square drive is machined directly in the bottom of the pinion.

Actuator size 4000 does not have inserts. This actuator size ha

m of the pinion.

DESCRIPTION

This version uses the standard aluminum actuator, but incorporates high-temperature grease, O-rings, and bearing materials; all suitable for high temperature operation up to 250°F (120°C).

SPECIFICATION

- Max. Pressure: 120 psig (8.3 barg)
- Torque Output: Standard
- Media: Air or non-corrosive gas
- Temperature: 14°F to 250°F (-10°C to 120°C)
- Finish: Polyurethane powder coating

SPARE PARTS/KITS

Dedicated high temperature spare parts kits are available for maintenance or to convert a standard actuator into a version suitable for high temperature service.

HIGH-TEMPERATURE COMPONENTS:

- Castrol High Performance Grease

DESCRIPTION

This version uses the standard aluminum actuator, but incorporates low temperature grease and O-ring seal materials; all suitable for low temperature operation down to -40°F (-40°C).

SPECIFICATION

- Max. Pressure: 120 psig (8.3 barg)
- Torque Output: Standard
- Media: Air or non-corrosive gas
- Temperature: -40°F to 176°F (-40°C to 80°C)
- Finish: Polyurethane Powder Coating
- Cycle Life: Replace seals after 250,000 cycles

SPARE PARTS/KITS

Dedicated low temperature spare parts kits are available for maintenance or to convert a standard actuator into a version suitable for low temperature service.

Notes:

When operating actuators in sub-zero temperature (<32°F or <0°C) care should be taken to counter the effects of freezing condensate inside the actuator.

LOW-TEMPERATURE COMPONENTS:

- Castrol Tribol GR TT 1 PD grease
- Silicone (MVQ70 rubber) o-ring seals
