BUSINESS TOOLBOX

Service Vehicle Winter Maintenance

Keep your service vehicle ready to handle the worst of snow and ice driving conditions by ensuring you have all-weather or winter tires, and install them on all four wheels. Avoid mixing different tire tread patterns, internal construction, and sizes. Don't use tires that show signs of wear near tread-wear indicators, and maintain proper tire pressure. Replace dirty air, fuel and PCV filters, and change your oil and oil filter as specified in your vehicle manual. Ensure your cooling system is flushed and refilled as recommended, and that your battery isn't about to die. Always carry a winter emergency kit.

Product Focus Persil Duo-Caps Universal - Part # PERSILCAPS-UNIV

Liquid laundry detergent contained in a dual-chamber water-soluble and biodegradable film capsule is revolutionizing laundry washing. The gels in the two chambers are double-concentrated, are separated from each other by a watersoluble film, and only combine their strength when washing starts. Persil Duo-Caps combines the brightness formula with a powerful active stain remover and achieves full washing performance even at low temperatures. The pre-portioned doses are easy to use and prevent overdosage.

1 Load = 1 Persil Duo-Cap
Product made in Germany.

WINTER GRILLING TIPS

1. Give your grill extra time to warm up and get to the ideal cooking temperature. To ensure that the grill heats up evenly, warm the grill at a slower rate than you would in summer.
2. Avoid lifting your grill lid as much as possible to preserve heat.
3. Choose thin cuts of meat like thin steaks, chicken breasts, and kebobs as they will cook faster and minimize the time spent in the cold.
4. If you want to keep your hands warm, go with fingerless gloves so you can still maintain the dexterity needed to handle your food.
5. Reposition your BBQ grill so that you minimize the steps needed to get from your house to your grill, and to protect against cold gusts of winds. In doing so, avoid cooking near anything that could present a fire hazard such as overhangs and porches. Never cook in an enclosed area.
6. Allow for longer cooking times depending on the type of meal. An ideal approach is to add 20 minutes of cooking time for every 5 degrees below 45 degrees F.
7. Keep a sufficient supply of extra fuel handy as you will use up more fuel while trying to keep the heat at the ideal temperature.
