 **Oldcastle**® Enclosure Solutions

UNDERSTANDING OUR PRODUCT BRANDS

CARSON®

A NAME YOU TRUST. DURABILITY YOU EXPECT.

Carson® high-density polyethylene (HDPE) enclosures deliver reliable, chemical and water resistant performance and install with ease. The Carson® brand offers a wide variety of sizes and is preferred and specified by industry professionals nationwide. You can depend on the trusted Carson® brand, delivering reliable hand holes, valve boxes, meter boxes and vaults for nearly 50 years.

CHRISTY®

RELIABLE AND COST-EFFECTIVE.

Christy® concrete enclosures deliver reliable, cost-effective performance. The Christy® brand offers a wide variety of sizes making it the preferred choice for many applications. You can depend on the trusted Christy® brand, delivering reliable hand holes, valve boxes, meter boxes and vaults to the utility market for over 40 years.

FIBRELYTE®

STRONG AND EASY TO HANDLE.

Fibrelyte® manufactured from an exclusive composite formulation of polyester resin, fiberglass and calcium carbonate yields lightweight, high strength enclosures. This proprietary composite material is stronger, easier to handle and much lighter than concrete, saving both time and money during installation, service work and transportation.

UNDERSTANDING OUR PRODUCT BRANDS

SYNERTECH®

EXCEPTIONAL STRENGTH AND DURABILITY.

Our SYNERTECH® brand of DUO MOLD® polymer boxes combine the exceptional strength and durability of High Density Polymer Concrete with the tough and lightweight qualities of Sheet Molding Compound to create exceptional equipment enclosures. Combining the two patented materials with a patented manufacturing process, our SYNERTECH® products represent the toughest and lightest underground enclosures on the market today. Sizes range from 11x18x12 to 36x60x72 with SCTE Tier 15 performance load rating.

H-SERIES™

DURABILITY DELIVERED THROUGH INNOVATION.

H-Series™ polymer concrete enclosures deliver strength and durability like traditional concrete, but at a fraction of the weight. The H-Series™ brand offers a broad range of sizes and configurations to meet your needs. These enclosures provide medium to heavy duty solutions for vaults, splice boxes and meter boxes ideal for any industry – municipal water, telecommunications, and other commercial and industrial applications.

SELECTING THE RIGHT PRODUCT AND ACCESSORIES

CHOOSE YOUR SIZE AND BRAND

A wide variety of sizes are offered in round, square, and rectangular configurations. Choose the size and brand that best fits your need.

KNOW YOUR REQUIRED PERFORMANCE LEVEL

Our bodies and lids are rated for performance. Look for the load rating that matches your project application.

SELECT A LID STYLE AND MARKING

Lids are available in a variety of materials and colors. Some are available with specialty markings, marking plates, and special locking options.

CHOOSE ACCESSORIES, HARDWARE, AND OTHER OPTIONS

Hardware & other additional items can be found for our enclosures in the back of this booklet.

PRODUCT AVAILABILITY

Oldcastle Enclosure Solutions divides products into two availability groups: Quick Ship and Made to Order.

The Oldcastle Enclosure Solutions Quick Ship Program is designed to provide customers with some of our most popular items quickly, supporting projects with tight schedules. Our Quick Ship items can be easily identified in this document by locating the items with this truck  next to them. Items that are identified as Quick Ship will be shipped from an Oldcastle facility within 3 business days.

Made to Order items are identified as all items that do not have the Quick Ship icon next to them. The lead time for these items can be obtained by reaching out to our customer service team.

ADDITIONAL INFORMATION

For Christy Brand and Fibrelyte Brand products, please see the latest Oldcastle Enclosure Solutions Christy Products Catalog.

For more detailed information on a product, see the individual specification sheet located in the Oldcastle Enclosure Solutions Catalog Binder or online at oldcastleenclosures.com

PERFORMANCE LEVEL AND LOAD RATINGS

**Units must include a steel frame and steel cover.*

Load Ratings are determined by the lowest component rating

The Rural Utility Service (RUS) is a department of the US Department of Agriculture organized to facilitate rural developments. You will find Oldcastle Enclosure Solutions brand Enclosures listed by the RUS. Please reference brand specific product data sheets for additional clarifications. All Oldcastle Enclosure Solutions brand Enclosures conform to the RUS "Tamper Resistant" fastener design for buried pedestals found listed by code and group.

The "Test Load" term is used in ANSI/SCTE 77-2010 to designate the minimum load that an Enclosure must be able to sustain to qualify for a particular performance rating. The term is synonymous with (minimum) Failure Load. It should be noted that within the ANSI/SCTE 77-2010 specification, the "Test Load" is 1.5 x the Design Load. Some specification and Operating Companies select a higher multiple or Safety Factor for Proof of Design Load.

PRODUCT MATRIX BY BRAND

Select the appropriate size and shape for your application from our list of available products in each brand.

SECURITY, HARDWARE, AND ACCESSORIES

Enclosures come equipped with standard lid fastening hardware (varies per box type). Standard assembly is shown below.

🔒 STANDARD HEX HEAD:
3/8 - 1/2 Stainless Steel Hex Head Bolt with Washer

🔒🔒 DROP-N-LOCK™:
Automatic locking system (available on select HDPE covers only)

🔒🔒 STANDARD PENTA HEAD:
3/8 - 1/2 Stainless Penta Head Bolt with Washer

🔒🔒🔒 PADLOCK & EYE:
Eye bolt and padlock (available on steel covers only)

🔒🔒🔒 VANDAL PROOF:
Oldcastle Enclosures Vandal Proof bolt with specialty key.

LIGHT DUTY PLASTIC PRODUCT

Typical grass surround installation

Crushed rock backfill is shown as specified in the Company's Installation Procedure. The tamped crushed rock supports the vault, preventing subsidence and allowing for drainage. The excavated spoils have been used for backfill.

Note the soil is free of rocks larger than three inches.

LIGHT DUTY HYBRID PRODUCT

Alternative for greenbelt location

Lateral load resistance is enhanced in this range of products. The polymer concrete cover offers an increased coefficient of friction (over HDPE) for foot traffic.

Note that backfill, although not crushed rock, is changed to specify compaction, thereby enhancing vault performance.

LIGHT DUTY HYBRID PRODUCT

Concrete or Asphalt Surround (shown)

Note compacted crushed rock surround. Dry mix could be added to crushed rock under "ring" to improve vertical load bearing.

CARSON® PLASTIC PRODUCTS ARE NOT INTENDED FOR INSTALLATION IN ANY DELIBERATE TRAFFIC AREA.

Oldcastle® underground enclosures are suitable for delivery to job sites on any construction vehicle. Enclosures can be safely handled by hand by the proper number of trained workers or proper lifting equipment for loading and unloading.

Site preparation

- Follow local guidelines and job requirements.

Excavation and preparation of enclosure hole (fig 1).

- Remove material to provide 1 – 2' of clearance all around the enclosure and 6" – 8" in additional depth allowing for bedding and rodent barrier.
- Place a suitable bedding material, such as crushed stone, at the base of the excavated hole.

Removing enclosure from delivery vehicle and pallet.

- Remove shipping band from enclosure.
- Use proper hook to remove lid from the enclosure base (fig 2).
- Using proper lifting techniques, secure and remove box from truck. Lifting bolts are provided for boxes 2424 and larger (fig 3).
- The angle of the lifting lines should not exceed 65°.
- Optional : Install temporary brace supports in the interior of the enclosure to provide additional lateral rigidity and if 95% compaction is required (fig 4).

Enclosure placement into prepared hole.

- Reinstall the lid to the base of the enclosure prior to uniformly backfilling on all four sides. Nut, bolt threads, and cover seat should always be free of dirt and debris before tightening down the bolt.
- Bed the base of the hole with crushed stone. Then lift and place the enclosure into the bedded hole.
- Place crushed stone around the sides (fig 7 & 8).
- Position the enclosure to the proper grade level and check.
- Remove lid with proper lifting-eye tool.
- Make the necessary elevation adjustments and recheck the elevation.
- After the enclosure is set to the proper elevation, remove the temporary brace supports if used and reinstall the cover.
- Compact backfill per engineering specifications.
- Proper tamping tools such as a mechanical tamping device or hand operated device should be used. (fig 9)
- A hand shovel or backhoe should never be used for tamping as damage will occur.

- 1** Synertech® underground enclosures can be delivered to the site on any construction maintenance vehicle and are easily handled by hand or boom truck for unloading.
-

- 2** Mark location and begin excavation, prepare excavation so there is room for at least 6" of bedding material. Depth of excavation = Box Height plus 6".
-

- 3** Place a suitable bedding material (compacted pea gravel or crushed rock) beneath the enclosure and level it to ensure that the enclosure is well supported beneath its walls. Install wire mesh on the level bedding material. Wire mesh is utilized to help prevent intrusion by pests and rodents after installation. On larger enclosures, utilize a boom to install enclosure into the excavated hole.
-

- 4** Install temporary supports in the interior of the underground enclosure to provide greater lateral rigidity. The number of supports varies depending on the size of Underground Enclosure.
-

- 5** Place a temporary cover or the actual cover on the enclosure before backfilling uniformly on all four sides. Backfill to grade level. Compact every 6 inches to ensure well compacted backfill. A mechanical tamping device or alternative hand operated mechanical devices should be used. Do not use a tire or the shovel of a backhoe as tamping tools!
-

- 6** Be sure that the soil or pavement is to grade level before allowing vehicles in the vicinity of the enclosure.

PEDESTRIAN RATED ENCLOSURES

Installation in concrete or pavement for driveways, parking lots, and off-roadway applications where subject to occasional non-deliberate light vehicles.

Field preparation

- Prepare the excavation approximately 6" deeper than the overall height of the enclosure.
- The length and width of the excavation should be determined by adding 4" to 6" to the overall length and width of the box.

Installation Recommendations

- Place 3" to 6" of compacted material such as sand or gravel because of its drainage characteristics.
- The compacted material should be leveled so the top of the box is flush to grade.

Backfilling

- Place select backfill into the excavation in 12" lifts and compact.
- The final 8" of the excavation should be finished with concrete
- This may be accomplished by providing a form around the enclosure that would produce an eight-inch wide collar (fig 1).

Quick Specification

Underground enclosures are manufactured by Oldcastle Enclosure Solutions. Boxes and covers shall be concrete and have a pedestrian rated minimum vertical test load of 350 pounds per square foot. The concrete shall test to a minimum of 4500 psi compressive strength.

1

TRAFFIC RATED VALVE BOXES

Installation in concrete or pavement for full traffic applications. This procedure is consistent with Caltrans Standard Plan ES-8B.

Field preparation

- Prepare the excavation approximately 6" deeper than the overall height of the enclosure.
- The diameter of the excavation should be determined by adding 12" to the overall diameter of the box.

Installation Recommendations

- Place at least 6" of compacted clean crushed rock, coarse gravel, or angular stone material because of its drainage characteristics.
- The compacted material should be leveled so the top of the box is flush to grade.

Backfilling

- Place select backfill into the excavation in 4" to 6" lifts and compact.
- The final 6" to 8" of the excavation should be finished with concrete collar. This may be accomplished by providing a form around the enclosure that would produce a six-inch minimum wide collar (fig 1).

Quick Specification

Traffic-rated underground enclosures are manufactured by Oldcastle Enclosure Solutions. The box shall be precast concrete with a cast iron frame and cover with a 16,000 lbs design load. Traffic-rated enclosures shall be used where the box and cover may be exposed to vehicular traffic. The precast concrete mix shall exceed 4,500 PSI compressive strength. The concrete collar mix used in the installation shall exceed a minimum of 3,000 PSI compressive strength. Please contact Oldcastle Enclosure Solutions for a product cut sheet and possible applications.

TRAFFIC RATED ENCLOSURES

Traffic box installation procedure for installation in concrete or pavement for full traffic application. This procedure is consistent with Caltrans Standard Plan ES-8B.

Field preparation

- Prepare the excavation approximately 6" deeper than the overall height of the enclosure.
- The length and width of the excavation should be determined by adding 12" to the overall length and width of the box.

Installation Recommendations

- Place at least 6" of compacted clean crushed rock, coarse gravel, or angular stone material because of drainage characteristics.
- The compacted material should be leveled so the top of the box is flush to grade.

Backfilling

- Place select backfill into the excavation in 4" to 6" lifts and compact.
- The final 6" to 8" of the excavation should be finished with concrete collar. This may be accomplished by providing a form around the enclosure that would produce a six-inch minimum wide collar (fig 1).

Quick Specification

Traffic-rated underground enclosures are manufactured by Oldcastle Enclosure Solutions. The box shall be precast concrete with a steel frame and cover with a 16,000 lbs design load. Traffic-rated enclosures shall be used where the box and cover may be exposed to vehicular traffic. The precast concrete mix shall exceed 4,500 PSI compressive strength. The concrete collar mix used in the installation shall exceed a minimum of 3,000 PSI compressive strength. Please contact Oldcastle Enclosure Solutions for a product cut sheet and possible applications.

BOLT DOWN MARKING PLATE SYSTEM

Simplify lid inventory and customize your enclosures at the time of installation. Our polymer concrete and composite lids available on the Duralite™ boxes feature a molded-in recess to allow marking plates to be installed at the factory, distribution center, or customer location. A wide variety of standard markings are available as listed in this document in addition to custom plate markings.

INSTALLATION GUIDELINES AND INSTRUCTIONS

For optimum results, the lid and marking plate should be clean and dry. The marking plate will have a grid pattern on the back side.

- 1** Apply a moderate amount of Surebond SB-12 adhesive (approximately 1/8" bead) in a wave-like pattern with a border (see figure 2) starting and ending approximately 3/8" from pocket sides. Using excessive adhesive will slow curing process.
- 2** Place marking plate in pocket (figure 3) and apply continual pressure to the top of the plate for 10 seconds.
- 3** Adjust marking plate to the center of the pocket and ensure it is below or flush with the lid surface before adhesive sets.
- 4** Tack-free time is 10-20 minutes and full cure is approximately 24 hour.
- 5** Using the spanner bit, screw the two spanner bolts hand-tight into the holes of the marking plate.
