

NOT YOUR SWIMMING POOL'S CHLORINE

NOT ALL CHLORINES ARE DESIGNED FOR ALL APPLICATIONS

Swimming pool chlorine contains cyanuric acid, a chemical compound that protects chlorine from breaking down in sunlight. While this additive is great for swimming pools, it is prohibited for use in drinking water systems as it can eat away at the linings of piping and—at a high enough concentration—causes serious illness if ingested.

DryTec® granules and CCH® tablets provide fast-dissolving and effective sanitation for potable water applications without the adverse effects of cyanuric acid. Containing 68% calcium hypochlorite, these products meet the specified AWWA standard for disinfecting potable water, including the NSF Standard 60 for drinking water additives.

GRANULAR

CODE	PRODUCT DESCRIPTION
A23203	DryTec® Calcium Hypochlorite, 5 lb
A23201	DryTec® Calcium Hypochlorite, 25 lb
A23211	DryTec® Calcium Hypochlorite, 50 lb
A72304	DryTec® Calcium Hypochlorite, 100 lb

TABLETS

CODE	PRODUCT DESCRIPTION
I23220	CCH® Calcium Hypochlorite, 50 lb
