

## **NOTICE HYDRANT FLUSHING**

Please be aware that utility crews will be flushing fire hydrants in your area. To cleanse the system, we systematically open our fire hydrants to increase water flows allowing us to “flush” any minerals and deposits from the pipes. This is an essential part of our system maintenance program, and aids us in providing you with high-quality water service.

While flushing the system won't interrupt your water service, when crews are working in your area, you may notice a temporary drop in water pressure or discolored water. This is normal. If this happens, simply let your water run until it is clear.

As a result of hydrant flushing, residents in the immediate vicinity may experience temporary discoloration of their water. This discoloration is harmless, and generally consists of precipitates which do not affect the safety of water consumption. If you notice that your water is discolored, you can clear this issue by running all water faucets inside your home for approximately 15 minutes, or until the water clears. If water does not clear, please contact your local water utility at:
