# FIN FORM SHORING PLYWOOD

## PRODUCT DETAILS

- Hard, smooth Birch face veneers with Phenolic resin thermally fused into both panel sides
- All inner piles are solid Birch, for the strongest and most durable plywood forming panel available
- Plywood is not intended as a structural member, but only for preventing of local raveling between shores
- Finland Form® is compliant with OSHA regulations concerning plywood in trench shoring
- The industry standard by which other form panels are judged ensuring the utmost in strength, long life while being extremely durable
- True 3/4" 14-Ply Artic White Birch
- Measures 4' x 8' at 110 lbs
- DOT OVERSIZED - LTL fees & freight will be charged

## OVERVIEW

Finland Form® (a.k.a. Fin-Form) from NAPC has proudly become the standard by which other form panels are judged. Manufactured with 1.4mm rotary-cut birch veneers, even the thinnest panels provide uncommon strength with a smooth surface. Bonded with a phenolic resin adhesive, make these waterproof.

In trench shoring, Fin-Form is used to prevent soil from sloughing and to support uneven trench walls. It's a non-structural member designed to prevent local raveling (small pieces of soil falling) between shoring supports.
