

Valv-Powr® Series VPVL Stainless Steel Model D Double-Acting and Spring-Return Rack-and-Pinion Compact Pneumatic Actuators

Valv-Powr – VPVL double-opposed piston actuators combine the benefits of high cycle life, a rugged construction, and an extremely compact and symmetrical design with a unique range of features and options. They are specifically designed for fast efficient operation of ball, butterfly, and other rotary type valves.

FEATURES

Corrosion Resistant

The Jamesbury® brand line of forged stainless steel actuators are designed for use in corrosive environments. The products are constructed of A182 F316/EN 10088/3 1.4401 quality stainless steel and epoxy-coated springs, along with internal and external stainless steel fasteners, provide corrosion resistance in a variety of difficult applications and environments.

Typical applications include:

- Pharmaceutical
- Sanitary
- Food Industry
- Marine and Offshore

Single-Source Responsibility

- Valves, actuators, and accessories are designed to operate as a unit with the highest degree of compatibility.
- Valves, actuators, and accessories can be supplied completely assembled to provide unit responsibility from a single source.

Versatility

- Modular designs with same body and end caps for double-acting and spring-return reduce inventory. Springs can be added in the field to convert double-acting to spring-return or for changes in supply pressure.
- Failure direction can be easily reversed from spring-to-open or spring-to-close orientation simply by inverting the pistons.
- Actuator to valve attachments comply with ISO 5211.
- Solenoid valve and accessory attachments comply with NAMUR VDI/VDE 3845.
- A wide range of optional accessories and control devices that include limit switches, solenoid valves, and mechanical safety lockouts are available to satisfy virtually all automated valve requirements.

High Cycle Life

- Bearings on all sliding and rotating moving parts to ensure long life.
- Dual piston rack-and-pinion mechanism for simple construction, high cycle life, and constant torque.
- Body and end caps with honed internal surfaces for strength and lower coefficient of friction.
- Mechanically multi-guided aluminum pistons for precise movement, low friction, and high cycle life.
- Machined teeth on piston racks and pinions for excellent rack and pinion engagement and maximum efficiency.
- Extended temperature range option decreases cycle life.

Reliability

- Safety-contained multi-spring design with preloaded and heavy-duty coated springs for simpler range versatility, greater safety, and corrosion resistance.
- External adjustable stops in both directions assure flexibility and accuracy when setting the valve in the open and closed positions.
- As an added safety feature, the external adjustment screws are slotted. The slot will indicate the presence of internal pressure. Pressure will begin to vent before the adjustment screws are completely backed out of the actuator.

SPECIFICATIONS

Maximum Supply Range: 116 psi (8 bar)

Temperature Range:

Standard -40°F to +176°F (-40°C to +80°C)

High Temp 5°F to +302°F (-15°C to +150°C)

Low Temp -60°F to +176°F (-51°C to +80°C)

Rotation Adjustment: Close -5° to +5° from 0°

Open +5° to -5° from 90°

Supply Media: Air, mineral-based hydraulic fluid

STANDARDS

Actuator to valve mounting: ISO 5211

Actuator to solenoid mounting: Namur, VDI/VDE3845

Actuator to accessory mounting: Namur, VDI/VDE3845

Approved to ATEX 94/9/EC Directive:

IIGD c T95°C for Standard and Low Temperature option or IIGD c T150°C for the High Temperature option.

ACTUATOR SELECTION

To select an actuator for a particular valve and service, first determine the maximum operating torque that will be required from the applicable valve bulletin. Then refer to the appropriate torque output table and select an actuator that will, at the available supply pressure, provide a torque output no less than the required operating torque for the

valve. For spring-return units, both the spring torque and the air torque must be sufficient. In the event confirmation is desired for the selection of an actuator under specific service conditions, include full details on trim, seat materials, and media characteristics.

OPTIONS

100% Adjustable Travel Stop

To limit the rotation on the stroke beyond the standard VPVL actuator, a stainless steel 100%-adjustable travel stop option can be added. The stops, located in the end caps, allow the valve position to be set anywhere between full closed and full open. This option limits travel of only the counter-clockwise stroke for standard double-acting and spring-closed units. The 100% Adjustable Stop option is specified in the actuator ordering code.

Actuator	100% Travel Stop Lengths			
	L Min		L Max	
	inch	mm	inch	mm
VPVL051	6.2	158	7.3	186
VPVL100	7.2	184	8.5	216
VPVL200	9.5	242	11.3	286
VPVL250	11.0	280	13.0	330
VPVL300	11.9	303	14.1	359

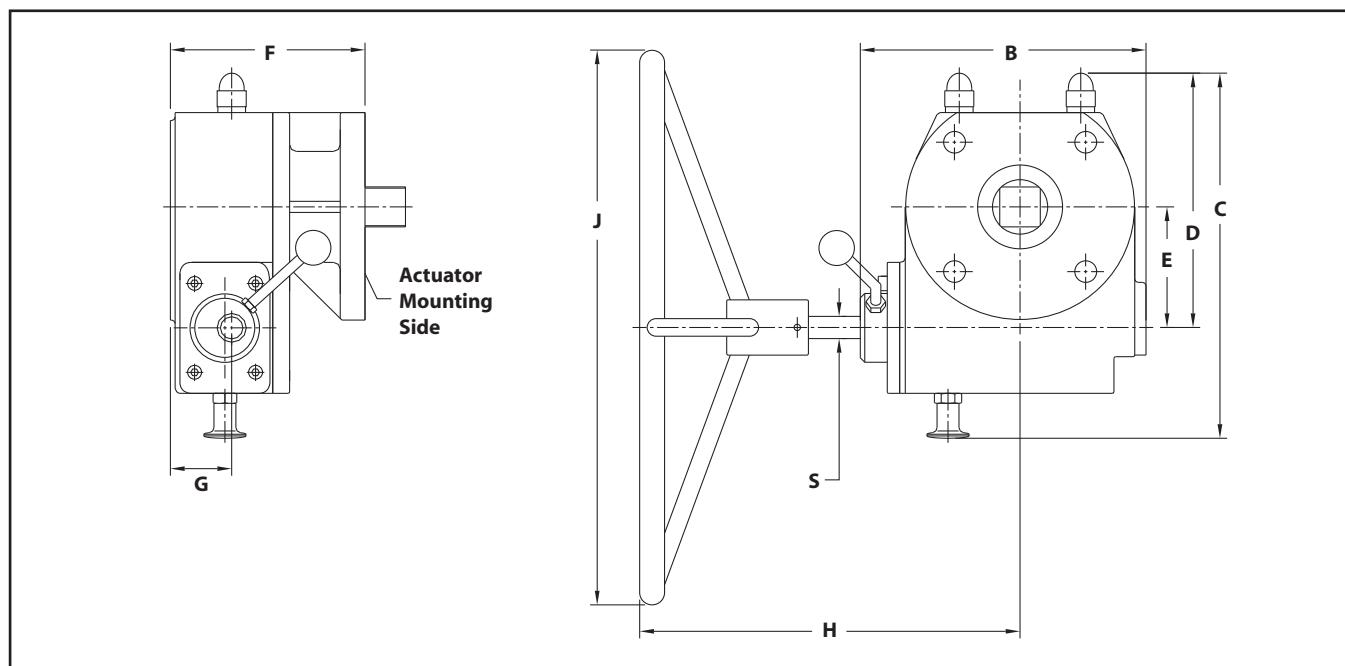

Declutchable Manual Override

A side-declutchable manual override is available for VPVL actuators. It consists of a manual gear actuator mounted between the actuator and the valve. The device is normally disengaged from the shaft. Upon engagement of the override clutch, overriding the actuator is done with ease, aided by the high-reduction ratio of the manual gear unit.

DIMENSIONS

VPVL Actuator Model (DA or SR)	Declutchable Override Kit	Approximate Dimensions - Inches								
		B	C	D	E	F	G	H	J	S
VPVL250 and VPVL300	DO-1	5.75	6.89	5.61	2.36	4.53	1.44	8.94	7.87	0.47

* The VPVL700 DA unit may be used if the air pressure required to produce the needed output torque is lower than 95 psi.

VPVL Actuator Model (DA or SR)	Declutchable Override Kit	Approximate Dimensions - mm								
		B	C	D	E	F	G	H	J	S
VPVL250 and VPVL300	DO-1	146	175	142	60	115	37	227	200	12

* The VPVL700 DA unit may be used if the air pressure required to produce the needed output torque is lower than 6.5 bar.

HOW TO ORDER

To specify a complete Valv-Powr Value-Line® Stainless Steel Actuator, simply make a selection from the code boxes below.

EXAMPLE: VPLSS200 SR4/5, shown below, is a 13.1 FT•LBS @ 60-psi (17 N•m @ 4.2 bar) spring-return actuator with spring-to-close rotation.
