METERJACKETS

Protect your meters for a small cost

COMPLETE PROTECTION

Meter Jackets work just like your own jacket—once in place, they provide an insulating layer of protection from mother nature.

Meter Jackets are not one-size-fits-all. This custom design feature enhances the Meter Jacket's thermal qualities. Every jacket is designed for a snug fit, from the meter body out over the meter coupling nuts on the inlet and outlet ports.

THE CONCEPT IS SIMPLE

Meter Jackets from Select Products are individual meter insulators that protect water meters from freezing even during the most bitter winter. Custom-molded from expanded polystyrene, a Meter Jacket is available to conform to the exact configuration of the style you have in use.

A SMART SOLUTION

A Meter Jacket is an inexpensive solution to a costly problem. While the cost of a Meter Jacket is about the same as a meter bottom plate, bottom plates will not protect your meters from freezing a Meter Jacket will. Furthermore, a Meter Jacket protects the meter's expensive internal measuring chamber and component parts from freeze damage.
