

# 455 SERIES

## Arrowhead APACHE Anti-Siphon Frost Proof Lawn Faucet

Western legend tells of a fierce people surviving on spirit and grit. A resilient clan ready and willing to protect their own at any cost. These people were known as the Apache. You too can stand ready to protect your tribe with the all new Arrowhead "Apache" Anti-Siphon Frost Proof Lawn Faucet. This hydrant is built to take the punishment you can give it. Built tough to give long lasting protection against back flow and back pressure. Built solid to protect your health. Yet built with a conscience to be user friendly. The "Apache" stands ready to protect your family at all times.

The Arrowhead "Apache" hydrant has taken the best of the old ideas and combined them in a new way to give you a tough, long-lasting and sturdy design. We use Type L hard copper for our housing and operating rod. The newly designed solder wells around the nipple and the base of the body assure the pooling of the 95/5 solder for an absolute solid solder joint. We have taken the historically proven standard type vacuum breaker and put it back on the hose connection end of the hydrant. This was not possible to do in the past and still get the desired drainage for freeze

protection. Retaining the air vent from our previous design and using it in combination with a drain has taken care of that problem. After water shutoff, air is allowed to enter the valve body which in turn will let the remaining water in the hydrant evacuate through the drain thus providing you freeze protection. Finally the "Apache" is designed to be user friendly. Should the need arise for hydrant repair, all parts may be dismantled with household tools.
