Con-Stab ID Seal® Fittings have been sold in the gas, plumbing, and propane markets since 1990. **Con-Stab®** fittings are IAPMO, CSA, & ICC approved.

Con-Stab®'s patented "ID-Seal" is formed on the **INSIDE** of the pipe--where the surface is the smoothest. Therefore you must chamfer the **INSIDE** of your pipe with a Continental® Chamfer tool.

From NFPA 54 Section 3.3.5
 "An **anodeless riser** is an assembly of steel-cased plastic pipe used to make the transition between plastic piping underground and metal piping aboveground."

Plastic Pipe runs inside the riser.

CONFLEX® FLEX RISERS FOR PROPANE

Continental "Con-Flex®" risers are **flexible** casings that protect **yellow polyethylene pipe** aboveground. **Con-flex®** risers consist of corrugated stainless steel flex hose, with a durable UV & weather-resistant outer sleeve. Conforms to NFPA 54 & 58 for LPG systems.

W-R	Description	Length

2887030	1" IPS x 1" MIP	36"

Instructions:

1. Disassemble the **adapter coupling** (B).
2. Feed the polyethylene pipe through the sleeve from the **moisture seal** (A) to the **adapter coupling** (B)
3. Assemble the **adapter coupling** by sliding the gasket over the tubing, and then pushing the tubing onto the insert. Tighten the compression nut until it bottoms out.

Step 1: Match Pipe & SDR

BE SURE TO MATCH PIPE SIZE & SDR*

Pipe, Fittings, and Chamfer Tool must be the same!

*"SDR" stands for "Standard Dimension Ratio". It is a designation of a pipe's pressure rating. SDR is the ratio of Pipe Diameter to Wall Thickness.

Step 2: Chamfer Inside of Pipe

BEFORE
SQUARE-CUT

AFTER
CHAMFERED

CHAMFER INSIDE

Follow the arrows printed on the label. Only 3-5 turns necessary for a good chamfer!

The "coupon" is the piece of yellow poly that is shaved off during the act of chamfering.

Test your chamfer by pushing the pipe over the test gauge. If the pipe is chamfered properly, it should fit over the test gauge with minimum effort.

Test Gauge

Step 3: Mark Stab Depth

MARK THE STAB DEPTH!

1. Line up the end of the yellow pipe with the hub of the fitting.

2. Mark a line on the pipe to approximate the end of the fitting.

3. **Goal:** The reason to mark the stab depth is to ensure that the pipe is sealed by **both** o-rings!

"Hub"

Step 4: Stab & Check

STAB PIPE INTO FITTING

1/8"

Stab the pipe completely into the fitting, so that the "stab marker" is within 1/8" from the entrance of the fitting.

Once the pipe has been stabbed, it **cannot** be removed.

LOOK FOR THE "C"

You must use a **Continental Chamfer Tool** on a **Continental Fitting!**

YELLOW PLASTIC GAS PIPE

YELLOW "MEDIUM DENSITY" (PE2406) PE GAS PIPE

For several years, the gas utility and distribution market has used plastic gas pipe for its **ease-of-use, corrosion resistance, and cost effectiveness**. *NFPA 54* provides for the use of plastic piping within it's code for **outdoor, underground use only** at a **minimum burial depth of 18"**, using **yellow 14g tracer wire** for location purposes.

1838112	10 psi Low Pressure Test Kit		

- Furnished as shown with hexagonal test block, 1/8" tank valve, & 1/8" Male X Female Air Cock.
- Uses 2 1/2" 1/4" NPT Diaphragm Gauge
- **Increments: 1/10 psi**
- Accuracy: 1.5% of full-scale range

Please note: This gauge is extremely sensitive. Overpressurizing this gauge will cause the measuring element to fail and render the gauge inoperable. Wal-Rich will not accept returns of gauges that are improperly used.

The key to the W-R Low Pressure Gas Test Kit is the diaphragm actuated gauge. Standard Pressure gauges are not capable of measuring minute variations because they use a bourdon tube. This type of measuring element, which is effective for higher pressures, will not detect the minute variations in pressure when a leak exists.

Be advised AIR COMPRESSORS should not be used to get a reading, and that most BICYCLE and HAND PUMPS can deliver upwards of 60 psi. per thrust.

WAL-RICH SHOWER PAN LINER

Wal-Rich Shower Pan Liner is a blue **40-mil PVC sheet membrane** used in concealed waterproofing applications.

Its primary use is in tile shower installation, and may also be used to waterproof decks, steam rooms, gang showers, reflecting pools, and fountains. Its flexibility and ease of use makes it a great alternative to sheet lead and copper.

Wal-Rich Shower Pan Liner exceeds the standards established in **ASTM D4551-01** for Vinyl Pan Liners and is IAPMO-approved.

Available in 4', 5', and 6' widths, and 40 foot and 100 foot lengths.

**WAL-RICH SHOWER PAN LINER
INSTALLATION GUIDELINES**

PREPARATION

The structural subfloor must be clean, reasonably smooth, and free of holes, cracks and sharp projections. Nail heads should be driven flush or recessed.

Blocking between studs is recommended to support the upturned shower pan liner.

Subfloor or substrate should be sloped per code requirements, towards the drain, and must contain no depressions where water will accumulate. On smaller areas, pitching may not be a code requirement. We recommend a pitched subfloor whenever possible.

Drains must be suitably designed for use with a flexible membrane. They must incorporate a clamping device and weep holes.

MATERIALS

W-R Shower Pan Liner.

W-R Shower Pan Liner Cement. Alternatively, certain other medium bodied PVC shower pan liner cements may be used, such as IPS Weld-On. Regular PVC pipe cement cannot be used with our liner, nor can products designed for CPE based material such as Noble companies Chloraloy®.

Wide head nails for tacking upturn of liner.

INSTALLATION

Line the area with W-R Shower Pan Liner. Allow for 3" upturn when cutting the liner.

Turn the liner up on all sides, fold and glue the corners.

Secure the liner to side walls using nails or staples ½" from the top. Lay excess material over the dam, if any, and fasten on the outside face.

The drain is fitted by pressing firmly on the liner to show the outline of the drain body opening. Cut opening, taking care not to cut beyond the perimeter of the clamping ring of the drain. Notch material to expose the tappings in the drain body, or punch out bolt holes by placing the round end of a ball pean hammer over the holes and tapping until the bolt hole has been cut.

Caulk sealant may optionally be used to improve the seal between the clamping ring and the liner. Be sure not to block weep holes with any sealants.

Fit and tighten clamping ring firmly to create a watertight seal.

Where large areas are to be protected, (steam rooms, gang showers, etc.), sheets may be joined. W-R Shower Pan Liner Cement provides a watertight, permanent seam. Allow for a 3" lap seam, and 6" when using a cap seam. Roughen both surfaces with a clean wire brush, working 3 feet at a time. Allow to cure for 24 hours before stressing.

Test installation by filling shower pan with water. If leaking is detected, first retighten the drain clamping ring. Inspect the ring to be certain that it is not warped and that it mates properly with drain body. In some cases it is possible to create a glue seal by gluing a second layer of W-R Shower Pan Liner around the drain body and reassembling the drain.

LIMITATIONS

W-R Shower Pan Liner is intended for installation with a full mortar bed. Thin bed tile installations may require a different installation.

Our installation guidelines are general descriptions and are based on information which we believe to be reliable. Because specific use, installation and material cannot be controlled by Wal-Rich Corporation, our warranty is limited to the replacement of defective product.

 BOILER & RADIATOR SECTIONS
 SPLIT FITTINGS - STRIPPED THREADS
 APPLICABLE ON ALL DEFECTIVE METALS

Ask a Master Plumber about Black & White Metal Fix.

Since 1917, plumbers have relied on Black & White Metal Fix to fix cracks in all metals. Unlike epoxy, which can take several minutes to apply and hours to cure--this mineral composite repairs cracks in minutes.

Simply heat the object to be repaired with a torch to a few hundred degrees, and press Black & White Metal Fix into the crack. A "wetting transition" occurs--the metal-fix flows into the crack--and creates a seal on the inside AND outside. Try that with epoxy!
