

AutoCut[®]

Copper Tubing Cutter

Don't have enough swing room for full size copper tubing cutters? The AutoCut[®] easily slices copper tubing in tight spots - even with less than one inch of clearance from a wall when doing stub-out work.

The compact AutoCut fits in the palm of your hand. And it's quicker than conventional cutters. Just snap it on the tube, close the gate and turn. The hardened steel cutting wheel automatically tightens as you twist with no knobs to turn! It cuts more cleanly, too. The spring loaded cutting wheel provides constant pressure, so you'll never accidentally crimp the tubing.

When there's not enough room around the tube for your hand, the optional Ratchet Turning Handle for the 1/2 and 3/4 inch models gives you extra leverage. It slides over the AutoCut from either side for maximum ease of operation.

The AutoCut is available for 1/2", 3/4" and 1" copper tubing sizes. Keep all three in your tool box. Watch out though, they'll spoil you.

Do stub-out work closer to the wall than conventional pipe cutters because there's no turning handle to get in your way.

Tight clearance? The Ratchet Turning Handle is a real knuckle saver. Just slide it over the AutoCut for extra turning leverage.

Catalog Number	Description	For use with:	Standard Pack
ATC-12	Copper Tubing Cutter	1/2" (13 mm) copper tubing*	12
ATC-34	Copper Tubing Cutter	3/4" (20 mm) copper tubing*	12
