

FIRST IN THE INDUSTRY: TRENCH TOUGH PLUS™ MOLDED CIOD-SEWER ADAPTER

The new Multi Fittings gasketed adapter coupling is designed to connect a CIOD C900 pipe to sewer pipe. It is the first molded CIOD to sewer size coupling and represents a significant increase in quality from the fabricated versions currently on the market. The new Trench Tough Plus Adapters deliver long-term reliability no other competing PVC sewer fitting can match. No sewer fitting is as tough while being easier to install.

- Multi Trench Tough Plus adapters are made with a special high molecular weight PVC compound that combines the stiffness properties needed to withstand high loads with the flexibility required to avoid cracking.
- The structural reinforcements ensure that the adapter coupling can easily handle the stress caused by shifting soils and changing load conditions.
- The patented gasket design requires less force to complete the joint while ensuring leak proof reliability.
- It exceeds the requirements for ASTM D3034 and F1336.

TRENCH TOUGH PLUS™

FEATURES & BENEFITS

Long-term Reliability
Easy to Install
High Impact Strength

SIZES

6" x 6"
8" x 8"

MULTI FITTINGS
