Corrosion Monitors

AGF's CORRINSITE™ Corrosion Monitors were developed in response to the increase of corrosion-related failures in both wet and dry fire protection systems. CORRINSITE™, available in an in-line pipe or mechanical tee, provides a simple to install, maintenance-free, and inexpensive method to monitor for hidden corrosion problems in any fire protection system.

The CORRINSITE™ is manufactured from the same mild carbon steel as the system's piping and its surface corrodes as the pipe corrodes. When the monitor corrodes beyond it's limit, moisture penetrates the sealed chamber and transforms the brilliant white sight glass to a fluorescent orange color, indicating a corrosion problem and need for further investigation.

Water Main

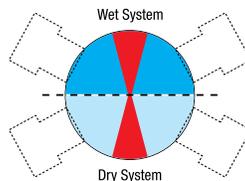

Dry System
Parking Garage

Branch Line

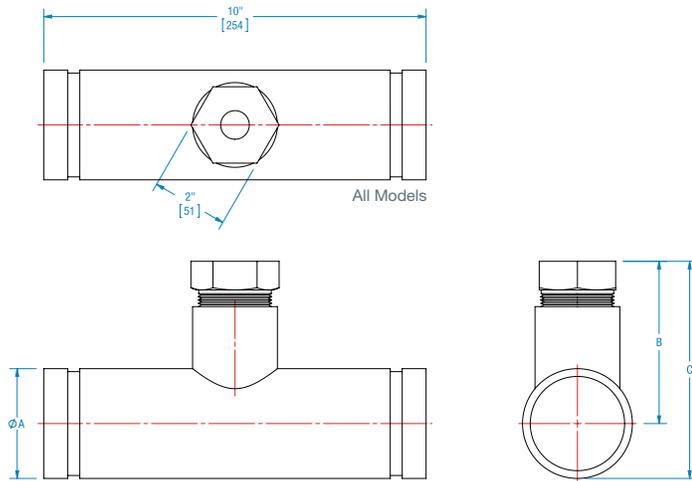

The CORRinSITE™ Model 7700 and 7800 can be installed virtually anywhere on a wet or dry fire system. AGF recommends the above locations for monitoring the most important areas of the

system. When installing horizontally on a wet system, the monitor's sight glass should be facing up (dark blue area) and on a dry system, the sight glass should face down (light blue area).
