The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated icroprocessor-Controlied HVAC Equipment in a building or faciinty. Building Management Systems and Building Control Systems are also subcategories of Builing Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Eqi Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and . commission and which are integr
products by the authorized user.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FI etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/coremote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose In, Telecommumicaios, Neworking Caing,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Hicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems
3. Integrated Microprocessor-Controlled HVAC Equipment such Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [Istaledl, Factory
 commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus,
etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated etc.) to communicat.
platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
ration, inten Integrated Microprocessor-Based HVAC Equipment Cleans, tests, and balances the Integrated Microprocessor-Controlled HVAC Equipment in accordance with Code Requirements.

The scope of this contract does not include:
Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Hicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems
3. Integrated Microprocessor-Controlled HVAC Equipment such Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [Istaledl, Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus,
etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated etc.) to communicat.
platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
ration, inter Inte of Interated Microprocessor-Based HVAC Equipment
Cleans, tests, and balances the Integrated Microprocessor-Controlled HVAC Equipment in accordance with Code Requirements.

1. Plumbeng thys contract does not include:
showers, water fountains, water heaters hot water tanks, garbage disposa
showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed
2. Chillers, Reotw, Piping, etc. shall not be obtained on these contracts.

Factory Installed/Factory-Provided micro-processor--controlled included $/$, remote I/O modules, etc. which are not
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxia \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio Video equipent or systems (es ans.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated iicroprocessor-Controled HVAC Equipment in a building or faciiity. Buidng Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [lotedlument. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicat.
platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
systems icration, or mainten eq Integrated Microprocessor-Based HVAC Equipment Cleans, tests, and balances the Integrated Microprocessor-Controlled HVAC Equipment in accordance with Code Requirements.

1. Plumbing this contract does not include:

Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor-controlled included $/$ c , remote $/ / O$ modules, etc. which are not
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxia \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio Video

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Hicroprocessor-Controled HVAC Equipment in a buildng or faciily. Buidng Management Systems and Bur Aug Contro Systems are abo subcategories of Bulding Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mourded $\mathbf{H}$ Inc Equipment.

Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicat.
platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
gration, mainten Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxia \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Gudio-Video

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Ecroprocessor-Controlled HAC Equipment in a building or facility. Building Management Systems and Buis Conr Sys,
. Itegrated Microprocessor-Controlled HVAC Equipent such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mout HVAC Equipment.
Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
Integrated BAS/EMS/IItegrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane ( AAP ), and/or other similar device, which utilize certain proochs (e.g. BACN, Lonalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/conemote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. he contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited
. Genio Video
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

| PICCV-25-014tLF24MFT.SUS |  |

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Eroroprocessor-Controiled HAC Equipment in a building or faciilty. Building Management Systems and Building Control Sytems are aso subcategries of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipent such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Montred HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
4. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (HAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/conemote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited
A. General Purpose 1 , Telecommumicaions, Networkng Cabing, hier Opics (e.g. phone, phx, aigial centrex, digita key systems, television, calle, Aine, general broadband

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other sid device, which utilize certain etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP) and/or other si etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs ,
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/c, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpse I, Telecommumicaios, Neworlig Caing,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Morded HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FISP), and/or other sind device, which utilize certain pod etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs ,
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/c , remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpse I, Telecommumicaios, Neworkis Caing,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Morted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other $\boldsymbol{s}$, Bed etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs ,
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included / remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
. General Purpse IN, Telecommumicaios, Neworkig Caing,
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Mord Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other 5 , BACNet LonTalk, Modbus, etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he

Factory Installed/Factory-Provided micro-processor--controlled included/co, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
. General Purpse I, Telecommumicaios, Neworkis Caing,
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and . commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other sivis device, which utilize certain etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arrington,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

Cleans, tests, and balances the Integrated Microprocessor-Controlled HVAC Equipment in accordance with Code Requirements.
The scope of this contract does not include:
howers, water foutains, water heaters include the assembly, installation
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers Ductwork, Piping, etc. shall not be obtained on these contracts.

Factory Installed/Factory-Provided micro-proil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or E E

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mond Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FILP), and/or other siw device, which utilize certain or etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/ysstems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
a) Is certified by either the Associated Air Balance Councii Bureau- AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Aringgton,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment;

Cleans, tests, and balances the Integrated Microprocessor-Controlled HVAC Equipment in accordance with Code Requirements.
The scope of this contract does not include:
.
showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not inited ti:
B. General Purpose IN, Telecommumicaions, Networking Caing, (e.g. phone, px, digial celrex, a.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)'
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controiled HAC Equipment in a building or faciinty. Building Management Systems and Building Control Sytems are aso subacegries of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Monted HVAC Equipment.
 commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane ( SA , and/or other similar device, which utiiize certain protocols (e.g. BACNe, LonTalk, Modbus, platforms/systems.
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Factory Installed/Factory-Provided micro-processor--controlled includedco remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose 1 , Telecommumications, Networking Cabing, hier Opics (e.g. phone, phx, digita centrex, digital key systems, television, cable, Line, general broadband

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Hicroprocessor-Controled HVAC Equipment in a builing or facilly. Buidng Management Systems and Buidng Control Systems are also subcaegores of Buding Auo waion Systems.
3. Integrated Microprocessor-Controlled HV AC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mour Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , Sy for to allow the Building Automation System or Energy Management System to monitor the performance of these commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm interface Pane (1), and/or other similar device, which utilize certain protocols (e.g. BACNe, LonTalk, Modbus, etc.) to commumicate among these systems, and where the Building Automan System or fire alarm system allows for monitor of these systems by the authorized user via a single platform or integrated
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten te of Integrated Microprocessor-Based HVAC Equipments

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Factory Installed/Factory-Provided micro-processor--controlled includedco remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
the contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited
A. General Purpose 1 , Telecommumications, Networking Cabing, hier Opics (e.g. phone, phx, aigia centrex, digita key systems, television, cals, Ahe, general broadband

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

## 

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and . products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose I,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Monded HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and . commission and which are integrated with the BuildingAutomation Systems or Energy Man products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, ,
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IN, Telecommumicaions, Networ.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solety to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated ,icroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-MIled HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor
Controlled HVAC Equipent
 etc.) to communicat.
platforms/systems.
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned ins. systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (eg. smart boards projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens/Displays etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. .
. Integrated Microprocessor-Controlled HVAC Equipment sus Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , Sy the the allow the Building Automation System or Energy Management System to monitor the performance of these commission and which are integra
products by the authorized user.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (rFAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus,

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventiator, h
. Factory Installed/Factory-Provided micro-processor--controlled included $/$ c, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose 1 , Telecommmicaions, Networking Cabing, Hier Optics (e.g. phone, phx, digial centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Hicroprocessor-Controiled HAC Equipment in a building or faciinty. Building Management Systems and Building Control Sytems are aso subacegios of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Montr HVAC Equipment.
 commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (HAP), and/or other similar device, which utilize certain protocos (e.g. BACNet, LorTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs ,
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator he
. Factory Installed/Factory-Provided micro-processor--controlled included/contrete I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The conract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose 1 , Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, ,-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Kicoprocessor-Controned
3. Integrated Microprocessor-Controlled HVAC Equient
 commission and which are integra
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated
platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment:

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
. Factory Installed/Factory-Provided micro-processor--controlled included/controle I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose 1 , Telecommumications, Networking Cabling, Hber Optics (e.g. phone, pox, diga

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated . croprocessor-Controild
3. Integrated Microprocessor-Controlled HVAC Eqipmet sus Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted Instledl Factory

Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and , Sy , commission and which are integrated with the BuildingAutomation Systems or Energy Ma products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicat.
platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

I Itegrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabing, Hber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated hicroprocessor-Contronled H AC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcagteries of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to progra, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane((NAP), and/or other similar device, which utilize certain ${ }^{2}$ (e.g. BACNet, LonTalk, Modbus, mong these systems, and where the Building Automation System or fire alarm

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wers, water fountains, water heaters hot water tanks, garbage disposa
.
Chillers, Rooftop Units boilers air handlers, fan coil unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. It egrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Miled HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user. products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (1, and/or other similar device, which uilize certan scols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. It agrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Mond HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user. products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (MA), and/or other similar device, which uilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjuncion wishe contractor providing the aforementioned

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mout HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integrat products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fir platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjuncion wit the contractor providing the aforemen.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers Romp remote I/O modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equirment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or faciity. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prococols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instal ion, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
A. General Purpose Iudio-Video e or systems (e.g. smart boards projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Eicroprocessor-Controlled HAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, , platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to progra, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FreAlarm Interface Panel (IAP), and/or other similar device, which utilize certain ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemen.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Moed HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device inching, but not limited to, a router, gateway, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with he contractor providing the aforementioned installo, systems, graion, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The conract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.)

A physical security and faciity system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HAC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mout HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instald, system.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& tiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from hese contracts for any other purposes, including, but not imited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Instlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned distalation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installed], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
4. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fir. etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems ingratio, or maintenare of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equipment or systems (eg. smart boards projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [InC Equipment. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (MA), and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
ef Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicat fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Eicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mound HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention. Cis mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installail, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

The scope of this contract includes the following
Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
e) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (MAP), and/or other similar device, which utiize certain procos (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommunications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and in integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena e of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
Ceneral Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prococols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers ,
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane( 1 A ), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain scols (e.g. BACNet, LonTalk, Modbus,解

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
) As part of the and in conjunction with the contractor providing the aforementioned install

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equisment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [Istalledl) Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor antroled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain procols (e.g. BAC ee, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, uit ventiltor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

$\$ 314.34$

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mourded HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor年trolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel ( 1 AP), and/or other similar device, which utilize certain hocols (e.g. BAC LenTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and faciity system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l o c a t i o n ~ i n ~ t h e ~ e v e n t ~ o f ~ a ~ f i r e ~ o r ~ e m e r g e n c y . ~}$

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prlocols (e.g. BACNe, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping etce shall not be obtained on these contract

Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equi, orent or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted IIstadedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor antrolled HAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain proocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub, .
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited tid
A. General Purporen,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Moed HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor
 platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

Integrated Microprocessor-Based HVAC Equipmen;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, ins, dishater fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
Chillers, Rooftop Units, boilers, air handlers, fan coil, wit ventilotor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Moed HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor , platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs ins, dishater fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, b
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Adio Video equer (e.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and in integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted IVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Cr) to commuicate among these systems and where the Building Automation Sy gar fir hall platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjumcion w.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, nwers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
(coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from hese contracts for any oner purposes, incluading, but not limited to
B. Gdiovideo equipment or systems (e.g, smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

 ( $\square$

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory - Monded Hactequipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pocols (e.g. BACNet, LonTalk, Modbus,號

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Reoftop Units, boilers, air handlers, fan coil, unit ventiltor, he
A. Factory Installed/Factory-Provided micro-processor-controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mont HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor antrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain ecols (e.g. BACCe, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub howers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Roftop Units, boilers, air handlers, fan coil, unit ventibtor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIA),

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction wilh the contractor providing the aforement.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etce shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited the
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mont HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor mentroled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain proocols (e.g. BACNe, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [Istalledl) Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor antrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain hocols (e.g. BAC , LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) II certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approyed sub b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .

Chilers, Rooftop Units boilers air handlers, fan coil, unit ventibtor, $h$ e
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equil

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and individual(s)' location in the event of a fire or emergency.

|  |  |  | arranty Period - \# of year(s) after ptance as required by Appendix B |  |  |  |

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted Instadedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor rolled HAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (HAP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209, b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub, .
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. Gendio-Video eque

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Interrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain和

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
e) As part of the and in conjunction with the contractor providing the aforementioned instalation, systems ingraion, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain wecols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction withe contractor providing the aforemenis.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and faciity system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Miled HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, micate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms vide video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction wit the contractor providing the aforemenio.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus,路

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc shall not be obtained on these contract
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbs system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Interated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface P cate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc. shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
ble (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited the
B. Audio-Video equir or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ntrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pa

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction wis contractor providing the aforementioned install systems

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Reoftop Units, boilers, air handlers, fan coil, wit ventibtor,
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equirnent or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Iterated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory - Mouted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane ( (AAP), and/or other similar device, which utilize cert (e.g. BCN , LonTalk, Modbus,

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installatio, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certan ens (e.g. BACNet, LonTalk, Modbus, arm system allows for monitoring of all of these systems by the authoized

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten te of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub Wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any oher purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Paik (eand/or other similar device, which utiize cerli. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc.)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device incuding, but not limited to, a router, gateway, FireAlarm Interface Pall, and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any oner purposes, incluading, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire Alarm Interface Panel (FLPP), and/or other similar device, which utilize certain的

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire Alarm Interface Pane斯

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention. istalaal, sysems. Cration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub nowers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Isterled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, nowers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Isterled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenaice of Integrated Microprocessor-Based HVAC Equipmen

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs wers, water fountains, water heaters hot water tanks, garbage disposal
Ceneral Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and . products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prococls (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor mentrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prlocols (e.g. BACNet, LonTalk, Modbus,解

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub . wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Reoftop Units, boilers, air handlers, fan coil, unit ventiltor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, phx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Mounted Installedl. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these commission and which are integr.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalaal, systems.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equent or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel ( 1 , and/or other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaia, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l o c a t i o n ~ i n ~ t h e ~ e v e n t ~ o f ~ a ~ f i r e ~ o r ~ e m e r g e n c y . ~}$

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to progra, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor解

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these commission and which are integr.
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane ( $)$, and/or other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforeme.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pr_ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaion, systems cration, or maintena e of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equen or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, cate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single patform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub mits, dishwathers, and water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Reoftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Mouted Instadle Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fi

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installaio, systems.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Intalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAAP), and/or other similar device, which utilize certain pocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub nowers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prolocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub nowers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping etc. shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose 1

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory - Mouted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (MAP), and/or other similar device, which utilize certain cocols (e.g. BACNet, LonTalk, Modbus,

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with he contractor providing the aforemention installation, syster.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited the
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)'
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pailat, and/or other similar device, which utilize certan ens (e.g. BACNet, LonTalk, Modbus,解

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems. Craion, or maintena te of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Mound HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain斯
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and faciity system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane( (1)A, and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementio.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, wers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers, Rest $/$, $/$ modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user. products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers,
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mout HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned istallation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HACC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, F Ilarm Interface Pal andor other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementiond

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc),

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fis Jarm Interface Pane (AA), and/or other similar device, which utilize certain pr_ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HAC Equipment in a building or facility. Building Management Systems and Building Control Systems are aso subcategries of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (1, A), and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned mainten of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
${ }^{\text {B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment Theatre Screens/Displays, etc.). }}$
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HNAC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istilled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (YAP), and/or other similar device, which utilize certain scols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaion, systems gration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HAC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctadledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned distal an, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
A. General Purpose IT, Telecommunications, Networking Cabling, Fiber Optics (eg, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose ${ }^{\text {B. }}$.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, ec. to be purchased from these contracts for any oner purposes, including, but not imited to
A. General Purpose 1

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena ce of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping etce shall not be obtained on these contract
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommunications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory - Mouded [istalledl Factor Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain hocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wes, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc.)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted [Istlled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain hocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wes, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain ens (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs wes, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .wes, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [InCtled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (H), and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers, Reoto
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The conrract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar deviee, which utilize certan edser, (e.g. BCNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
2. General Ductwork, Piping, etc. shall not be obtained on these contracts
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following：
1．Building Automation System（BAS）which is a computerized system，operating on certain communications protocols（e．g．BACNet，LonTalk，Modbus，etc．）which manages，controls，and is integrated with the Integrated Microprocessor－Controlled HVAC Equipment in a building or facility．Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems．
3．Integrated Microprocessor－Controlled HVAC Equipment such as Chillers，Rooftop Units，Boilers，Air Handlers，fan coil，unit ventilator，heat pump，remote I／O modules，etc．which are Factory－Mounted［Inctled］Factory Provided Microprocessor－Controlled，requiring technical skill to program，integrate，and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user．
Integrated BAS／EMS／Integrated Microprocessor－Controlled HVAC Equipment shall means that the fire alarm system，cetv system，or access control system is integrated to the BAS／EMS／Integrated Microprocessor ntrolled HVAC Equipment using a device including，but not limited to，a router，gateway，FireAlarm Interface Panel（FIAP），and／or other similar device，which utilize certaiis platforms／systems．
Testing and Balancing of HVAC Systems shall be when an independent vendor，which：
a）Is certified by either the Associated Air Balance Council Bureau－AABC，Los Angeles，Cal． 90026 or by National Environmental Balancing Bureau－NEBB，Arlington，Va．22209，
b）Is an approved subcontractor to a contractor providing Integrated Microprocessor－Controlled HVAC Equipment，installation，systems integration，or maintenance；and

The scope of this contract does not include：
1．Plumbing systems This contract does not include the assembly，installation and repair of pipes，fittings，and fixtures of sewer／waste，water，and drainage systems and plumbing fixtures，such as sinks，commodes，bathtubs owers，water fountains，water heaters hot water tanks，garbage disposa
General Ductwork，Piping，etc．shall not be obtained on these contracts
3．Chillers，Rooftop Units，boilers，air handlers，fan coil，unit ventilator，heat pump，remote I／O modules，etc．which are not：
A．Factory Installed／Factory－Provided micro－processor－－controlled included／controlled），or
Cable（coaxial \＆fiber optic），wire，conduit，steel boxes，hangers，etc．must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts． The contract does not allow for cable（coaxial \＆fiber optic），wire，conduit，steel boxes，hangers，etc．to be purchased from these contracts for any other purposes，including，but not limited to
A．General Purpose IT，Telecommumications，Networking Cabling，Fiber Optics（e．g．phone，pbx，digital centrex，digital key systems，television，cable，T－Line，general broadband，
B．Audio－Video equipment or systems（e．g．smart boards，projectors，studio broadcasting，conference rooms，video video conferencing equipment，Theatre Screens／Displays，etc．）．
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A．To communicate fire or health and safety emergencies directly and solely to law enforcement organizations，or
B．To identify an individual（s）＇＇location in the event of a fire or emergency．

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Ist Equipment. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integrat
3. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including but not limited to a router, gateway, Fir. etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned intalkion, system

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, howers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers,
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [InC Equipment Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems ingraion, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Mout HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FILP) and/or other similar device, which utilize certain tocls (eqsACNet, LonTalk, Modbus, etc.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated platforms/systems.
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 , b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub howers, water fountains, water heaters hot water tanks, garbage disposa
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The conrract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor
 platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contract
3. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Finm Interface Pane (rA), a/dor other similar device, which utilize certain ) platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not imited to, a router, gateway, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemeni.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts. Chillers, Roftop Units, beilers, air handlers, fan coil, wit venter $/ O$ modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (MAP), and/or other similar device, which uiize certan RAS (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenare of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub . wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
A. General Purpose IT, Telecommumications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, howers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized rer via a single platform or integrated
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems in mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment Theatre Screens/Displays etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicat fire or heath and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaio, systems integraion, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Intalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAP), and/or other similar device, which utilize certain locols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire Alarm Interface Panel (FAAP), and/or other similar device, which utilize certain p tocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equirent or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
products by the authorized user. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (HAb to comm tate

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalaalo, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The conrract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, el. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inc Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementiond installaio, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Iterrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fitellarm Interface Pa commicate ame
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemenio.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, el. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction wit the contractor providing the aforementio. mainten tre of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Instled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device incuang, but not limited to, a router, gateway, FireAlam Interface Panel (MAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
e of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
2. General Ductwork, Piping, etc. shall not be obtained on these contracts.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equisment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or faciity. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HNAC Equipment using a device platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain列

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs Wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these
products by the authorized user.
Integrated BAS/EMS/ntegrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device ${ }^{\text {nding, but not limited to, a router, gateway, }}$, Interface Panel , and/or other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation systems integration, or mainterance and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installa, systems. Cgraion, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, his Interface Pane ( 1 , and/or other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention. instalan, systems

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equrn or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemeni.A

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub, howers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. Aueral Purpose .

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controiled HAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fi Alarm Interface Panel platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely use
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementiondistallons system. mainten of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, howers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
A. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Mound HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these
products by the authorized user.
Integrated BAS/EMS/ntegrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor LonTalks, Modbus,解
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalalan, systems ingrain, mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pa (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The conrract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equi, or or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ 'cation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installed] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Cntrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prolocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
e) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pecols (e.g. BACNet, LonTalk, Modbus,列

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
ef Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equirment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAPP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenatce of Integrated Microprocessor-Based HVAC Equipment;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' 'ocation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Intalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire Alarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to communicate
platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping etc shall not be obtained on these contrects
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, to communicate ame

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemention

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicat fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fi larm Interface Pa platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [InC Equipment. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (HA), and/or other similar device, which utilize certan Rocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaion, systems integration, or mainten

The scope of this contract does not include:

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire llarm Interface Panel (1), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub howers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equent or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane $\quad$, and/or other similar device, which utilize certain ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangens, e.. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pane (MA), and/or other similar device, which utilize certani hocols (e.g. BACNe, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems inegration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, el. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equirent or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, vide video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Interface platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforement.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs howers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steet boxes, hangers, ec. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mout HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface P c.) to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
A. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cctv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, F platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installatio, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctalledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, e.. to be purchased from these contracts for any oner purposes, incluading, but not imited to
B. Audio-Video equent or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certaik ander Sy stem or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Eicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc, which are Factory-Mount HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fi A arm Interface Pan解

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi, or or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjuncion whe contractor providing the aforementioned installaion, systems integration, or maintenatce of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
B. To identify an individual(s)' 'location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTakk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pro platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena e of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber opic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely u
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Incted] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain priocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena e of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTakk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istalledl. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pro platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not iimited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and in integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain pro platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc).

A physical security and faciity system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following
1．Building Automation System（BAS）which is a computerized system，operating on certain communications protocols（e．g．BACNet，LonTalk，Modbus，etc．）which manages，controls，and is integrated with the Integrated Microprocessor－Controlled HVAC Equipment in a building or facility．Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems．
3．Integrated Microprocessor－Controlled HVAC Equipment such as Chillers，Rooftop Units，Boilers，Air Handlers，fan coil，unit ventilator，heat pump，remote I／O modules，etc．which are Factory－Mounted［Inctled］Factory Provided Microprocessor－Controlled，requiring technical skill to program，integrate，and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user．
Integrated BAS／EMS／Integrated Microprocessor－Controlled HVAC Equipment shall means that the fire alarm system，cetv system，or access control system is integrated to the BAS／EMS／Integrated Microprocessor Controlled HVAC Equipment using a device including，but not limited to，a router，gateway，FireAlarm Interface Pane（1），and／or other similar device，which utilize certa，Bef（e．g．BACNet，LonTalk，Modbus， platforms／systems．
Testing and Balancing of HVAC Systems shall be when an independent vendor，which：
a）Is certified by either the Associated Air Balance Council Bureau－AABC，Los Angeles，Cal． 90026 or by National Environmental Balancing Bureau－NEBB，Arlington，Va． 22209 ，
b）Is an approved subcontractor to a contractor providing Integrated Microprocessor－Controlled HVAC Equipment，installation，systems integration，or maintenance；and
c）As part of the and in conjunction with the contractor providing the aforementioned installation，systems integration，or mainten

The scope of this contract does not include：
1．Plumbing systems This contract does not include the assembly，installation and repair of pipes，fittings，and fixtures of sewer／waste，water，and drainage systems and plumbing fixtures，such as sinks，commodes，bathtubs， Wers，water fountains，water heaters hot water tanks，garbage disposal
General Ductwork，Piping，etc．shall not be obtained on these contracts
3．Chillers，Rooftop Units，boilers，air handlers，fan coil，unit ventilator，heat pump，remote I／O modules，etc．which are not：
A．Factory Installed／Factory－Provided micro－processor－－controlled included／controlled），or
Cable（coaxial \＆fiber optic），wire，conduit，steel boxes，hangers，etc．must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts．
The contract does not allow for cable（coaxial \＆fiber optic），wire，conduit，steel boxes，hangers，etc．to be purchased from these contracts for any other purposes，including，but not limited to
B．Audio－Video equipment or systems（e．g．smart boards，projectors，studio broadcasting，conference rooms，video video conferencing equipment，Theatre Screens／Displays，etc）．
A physical security and facility system includes an emergency telephone system or pbx system expressly and solely us
A．To communicate fire or health and safety emergencies directly and solely to law enforcement organizations，or
B．To identify an individual（s）＇location in the event of a fire or emergency．

|  |  |  |  | Narranty Period－\＃of year（s）after eptance as required by Appendix B， |  |  |  |

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Intalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, F larm Interface Panel , and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, howers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc shall not be obtained on these contract
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ontrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
e) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposa
General Ductwork, Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and faciity system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommumications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Intalled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pa platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctalled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ntrolled H. platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator,
A. Factory Installed/Factory-Provided micro-processor--controlled included pump, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor , and/or other similar device, which utiize certan (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipmen

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventiletor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controm I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Sys

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor rolled using a device limited to, a router, gatewy, FireAlarm Interface platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipmen;

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventiletor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Sy

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. . BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated
Microprocessor-Controled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems. Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installed], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor , and/or other similar device, which uiize certain ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainte

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventibtor, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Instledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten ef of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controle I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. The scope of this contract includes the following
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Fire Alarm Interface Pa gese systems, and where the Building Automation System or fire alarm system allows for monittring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementiond

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi, orent or systems (e.g. smart boards, projectors, studio broadcasting conference rooms vide video conferencing equipment, Theatre Screens/Displays etc).

A physical security and faciity system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Instledl. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain to communicate among these systems, and where the Building Automation System or fire alarm system allows for monitoring of all of these systems by the authorized user via a single platform or integrated

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included $/$, remote I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (eg. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Istledl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned install

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc.)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To comunicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or faciility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mond HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to progra, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, Firminterface F ( 1 , and/or other similar device, which uilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementio.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etce shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited ta
A. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ 'cation in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Moud HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, $\quad$ Interface Panel (FIAP), and/or other similar device, which utilize certain platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemenio. mainten ef Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposa
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equi

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (MAP), and/or other similar device, which utilize certan etc.) to communicate
platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equent or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens $D$ Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not imited to
A. General Purpose IT, Telecommunications, Networking Cabing, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain $p$ etc.) to communicate
platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforement.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (HAP), and/or other similar device, which utilize certa platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementiond insin systems interaion, or mainten of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/(controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens Displays, etc)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain Hocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforemen

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, . Wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
B. Audio-Video equipment or systems (e.g. smart boarks, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens $D$ Displays, etc.

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used.
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Installedl] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAPP), and/or other similar device, which utilize certain platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipmen

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Nicroprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (HAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalk systems.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not imited to
A. Audio-Video ens ind

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ntrolled HAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel and andor other similar device, which utilize certain cocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs . wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber opice, wire, conduit, steet boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose IT, Telecommunications, Networking Cabling, Fiber Optics (e.g. phone, pbx, digital centrex, digital key systems, television, cable, T-Line, general broadband,
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc.).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ 'cation in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Ist Equipment. Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain cols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned instalation, systems.

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controte I/O modules, etc. which are not:
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor entrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, to comm icate

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenace of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub its dishwashers
General Ductwork, Piping etc shall not be obtained on these contract
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monded HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenate of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Interrted Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor antrolled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FAAP), and/or other similar device, which utilize certain procols (e.g. BACNet, LonTalk, Modbus,噱

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installaiion, systems integration, or mainten ere of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub owers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping, etc. shall not be obtained on these contracts
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms video video conferencing equipment, Theatre Screens/Displays etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain peols (e.g. BACNet, LonTalk, Modbus,

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and

As part of the and in conjunction with the contractor providing the aforementioned instalation, systems integration, or mainten er of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, Wers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' $\mathbf{l}$ location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain prococols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs nowers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork, Piping etc. shall not be obtained on these contract
Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equirment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain ecols (e.g. BACNet, LonTalk, Modbus,

Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, he
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to:
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:
. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
3. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mouted Inctile Equipent. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pan platforms/systems.
5. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance: and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (cooxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. General Purpose N, Telecommumicaions, Networkig Cab,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted [Inctled] Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Panel (FIAP), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, showers, water fountains, water heaters hot water tanks, garbage disposal
General Ductwork Piping etc. shall not be obtained on these contracts
2. Chillers, Rooftop Units, boilers, air handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are not:
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased rom these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting conference rooms, video video conferencing equipment, Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Monted [Inctled], Factory Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integr.
products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ), and/or other similar device, which utilize certan ocols (e.g. BACNet, LonTalk, Modbus, platforms/systems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or mainten

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtub showers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/(controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment, Theatre Screens Displays, etc.)

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used:
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
. Itegrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump remote I/O modules, etc. which are Factory-Mould HVAC Equipment. Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and commission and which are integra
products by the authorized user.
products by the authorized user.
Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor ), and/or other similar device, which utilize certain protocols (e.g. BACNet, LonTalk, Modbus, etc.) to commenicate
platforms/ystems.
. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintena

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs, .
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
Chillers Rooftop Units, boilers, air handlers, fan coil, wit ventilotor,
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts. The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
B. Audio-Video equipment or systems (e.g. smart boards, projectors, studio broadcasting, conference rooms, video video conferencing equipment Theatre Screens/Displays, etc).

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solely to law enforcement organizations, or
A. To communicate fire or health and safety emergencies directly and solely
B. To identify an individual(s)' location in the event of a fire or emergency.

The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or facility. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. The scope of this contract includes the following:

1. Building Automation System (BAS) which is a computerized system, operating on certain communications protocols (e.g. BACNet, LonTalk, Modbus, etc.) which manages, controls, and is integrated with the Integrated Microprocessor-Controlled HVAC Equipment in a building or faciilit. Building Management Systems and Building Control Systems are also subcategories of Building Automation Systems.
2. Integrated Microprocessor-Controlled HVAC Equipment such as Chillers, Rooftop Units, Boilers, Air Handlers, fan coil, unit ventilator, heat pump, remote I/O modules, etc. which are Factory-Mounted Inctill Provided Microprocessor-Controlled, requiring technical skill to program, integrate, and
commission and which are integrated with the BuildingAutomation Systems or Energy Management System to allow the Building Automation System or Energy Management System to monitor the performance of these products by the authorized user.
. Integrated BAS/EMS/Integrated Microprocessor-Controlled HVAC Equipment shall means that the fire alarm system, cetv system, or access control system is integrated to the BAS/EMS/Integrated Microprocessor Controlled HVAC Equipment using a device including, but not limited to, a router, gateway, FireAlarm Interface Pan platforms/systems.
3. Testing and Balancing of HVAC Systems shall be when an independent vendor, which:
a) Is certified by either the Associated Air Balance Council Bureau - AABC, Los Angeles, Cal. 90026 or by National Environmental Balancing Bureau - NEBB, Arlington, Va. 22209 ,
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment installation, systems integration, or maintenance; and
b) Is an approved subcontractor to a contractor providing Integrated Microprocessor-Controlled HVAC Equipment, installation, systems integration, or maintenance; and
c) As part of the and in conjunction with the contractor providing the aforementioned installation, systems integration, or maintenance of Integrated Microprocessor-Based HVAC Equipment

The scope of this contract does not include:

1. Plumbing systems This contract does not include the assembly, installation and repair of pipes, fittings, and fixtures of sewer/waste, water, and drainage systems and plumbing fixtures, such as sinks, commodes, bathtubs owers, water fountains, water heaters hot water tanks, garbage disposal
units, dishwashers, and water softeners. The repair and maintenance of plumbing by replacing washers in leaky faucets, mending burst pipes, and opening clogged drains is not allowed.
A. Factory Installed/Factory-Provided micro-processor--controlled included/controlled), or
B. Which are not integrated with the Building Automation Systems or Energy Management Systems,

Cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. must only be purchased from these contracts if used in conjunction with the physical security and facility system and solutions being purchased under these contracts.
The contract does not allow for cable (coaxial \& fiber optic), wire, conduit, steel boxes, hangers, etc. to be purchased from these contracts for any other purposes, including, but not limited to
A. Gene. Purpse in,

A physical security and facility system includes an emergency telephone system or pbx system expressly and solely used
A. To communicate fire or health and safety emergencies directly and solety to law enforcement organizations, or
B. To identify an individual(s)' location in the event of a fire or emergency.

| Model Number | Product Description | List Price | \% Discount | NYS Net Price |
| :---: | :---: | :---: | :---: | :---: |
| HVAC Field Technician: | Responsible for retrofit and repair of environmental- comfort systems, utilizing knowledge of air conditioning theory, pipe fitting, and mechanical layouts. | \$284.22 | 50\% | \$142.11 |
| Project Engineer - Controls: | Performs hardware and software design activities for building automation systems. Applies engineering principles and practices for work on assigned projects. Designs cost effective control solutions to meet project requirements. Works directly on the project team to assist the Project Manager with project commissioning. | \$237.68 | 50\% | \$118.84 |
| Project Engineer - Energy: | Performs technical analysis, review, measurement, and verification of financially guaranteed projects. Provides technical analysis and review for performance monitoring or contracts, and applies engineering principles and practices on assigned projects. | \$363.48 | 50\% | \$181.74 |
| Project Manager -Controls: | Manages all aspects of HVAC control projects, from beginning to end, with direct responsibility for project execution while leading a team, or teams, to accomplish specific objectives in a given time frame and with available resources. Responsible for the administration, implementation, and management of HVAC control projects. Ensures assigned projects' scope of work, schedule, and budget are achieved. | \$289.70 | 50\% | \$144.85 |
| Project Manager - Contracts: | Manages all aspects of HVAC contract projects, from beginning to end, with direct responsibility for project execution while leading a team, or teams, to accomplish specific objectives in a given time frame and with available resources. Responsible for the administration, implementation, and management of control projects. Accountable for assigned projects' scope of work, schedule, and budget. | \$300.22 | 50\% | \$150.11 |
| Controls Technician: | Performs more complex commissioning, diagnosis, and repair of environmental-control systems, utilizing knowledge of electronics, direct digital control, airflow, hydronics, refrigeration theory, and control techniques. | \$284.92 | 50\% | \$142.46 |
| Engineer I | Subcontract Labor - Performs basic engineering functions | \$172.06 | 50\% | \$86.03 |
| Engineer II | Subcontract Labor - Performs intermediate engineering functions | \$198.72 | 50\% | \$99.36 |
