

# 3M™ Wrap & Repair Silicone Tape

03625

---

## Product Uses

### **Strong and leak-proof**

Wear and tear is part of vehicle and home ownership. This versatile, self-fusing tape creates an air and water tight seal for hose, electrical, plumbing, and tool repairs. The product is designed to be resistant to heat, friction and UV and withstand extreme temperatures of -85°F to 500°F. Keep a roll of 3M™ Wrap and Repair Silicone Tape in your vehicle or garage in case of emergency and do not get caught off guard by repairs.

### **No adhesive, no mess**

3M™ Wrap and Repair Silicone Tape is rolled like a tape, but it is adhesive-free. By self-fusing to itself, it creates a permanent bond without the need for a sticky adhesive.

### **Flexible**

Curved surfaces can make repairs difficult, but the conformability and flexibility of 3M™ Wrap and Repair Silicone Tape makes repairs easier. Instead of replacing a damaged hose, make the hose repair yourself using this flexible and strong repair tape.

---

## Directions for Use

1. Prepare and clean the surface to be wrapped
2. Peel back the liner and wrap the necessary amount of tape around the repair surface stretching the tape and overlapping by half the width.
3. Once the surface is wrapped, overlap the last wrap full to ensure a good seal.
