•OPTIONAL ACCESSORIES •GAS VALVES •GAS CONNECTORS •PROPANE

PRO-FLEX™: ABOUT US

Based in Hillsboro, Indiana, Pro-Flex offers a corrugated stainless steel tubing (CSST) system for natural or propane gas that offers a flexible, labor-saving alternative to black steel pipe installations. Rigid steel installations require numerous fittings and cutting and threading of pipe which is extremely labor intensive. The fitting system and flexible quality of CSST eliminates the costs inherent with black steel pipe – labor savings alone can be up to 75%. Pro-Flex has been providing their tubing, fittings, and accessories to the plumbing, heating, propane & natural gas markets for more than 20 years.

In 2014, Pro-Flex was acquired by the ownership of Sioux Chief Manufacturing, a large and successful family owned plumbing manufacturer based in the Midwest for more than 50 years. Over those 50 years Sioux Chief has earned a reputation as a product innovator based on their unwavering dedication to listening to the installing plumbers, identifying the problems they encounter, and then inventing or improving a product to solve those problems. Upon investigation of Pro-Flex, Sioux Chief immediately identified a problem solving product.

THE PRO-FLEX™ ADVANTAGE

LEAK-FREE CONNECTION... FIRST TIME, EVERY TIME

By quizzing their loyal contractor base during plant tours and field trips, Sioux Chief learned that there was an inherent problem with the metal-to-metal fitting systems currently sold by competitors of Pro Flex. That problem was leaks due to "bad cuts" of the tube by installers. Metal-to-metal systems inherently require a very clean, almost perfect, cut to ensure the connection does not leak. In reality, producing a clean/perfect cut under field working conditions can be a significant challenge. And, of course, leaks require a costly, time consuming process of finding the leak, re-cutting the tube, replacing the fitting, and then re-testing. By contrast, the Pro-Flex dual-seal, gasket & O-ring system does not rely on a clean cut to accomplish its' sealing process. In fact, the O-ring part of the system is not impacted at all by the cut of the tube as it seals against the end of the fitting approximately an inch away from the cut. The end result is a leak-free connection the first time – every time. And that's why, unlike our competition, we have not changed our fitting system since its inception more than 20 years ago. *"If it ain't broke…"*

Other advantages to the Pro-Flex™ system include:
- **1-piece Retainer Ring that won't fall off the fitting during installation.**
- **Convenient, hand-tightening followed by ¼ to ½ turn with a wrench to seal the fitting - no more cumbersome torquing with wrenches on ladders, in crawl spaces, or in other confined spaces (see installation illustration below).**
- **Dual-size, inside-tapped fittings - ask any installer how handy this feature can be.**
- **Annealed tube that allows the tubing to bend and stay bent.**
- **Choose between our traditional yellow or new Flak Jacket™ arc-resistant versions (see next page).**
- **Same dual-seal, gasket & O-ring fittings work with both traditional yellow and Flak Jacket™ products.**

In summary, the Pro-Flex™ fitting system is the most forgiving, cost-effective, leak-eliminating system on the market today. Contact your local representative or give us a call for more information.
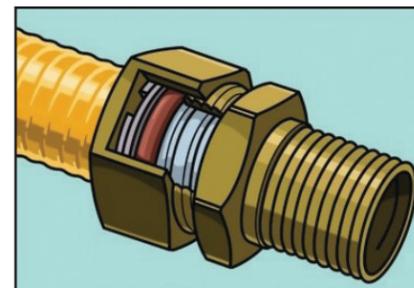

INSTALLATION AS EASY AS 1, 2, 3...

1. Strip and remove plastic coating in the fourth valley and slide on nut.

2. Place Retainer and Slide Ring in the fourth valley. Place o-ring in third valley. Ensure gasket is in fitting.

3. Hand tighten nut followed by additional 1/4 to 1/2 turn with crescent wrench.

INTRODUCING

FLAK JACKET™

ARC-RESISTANT CSST

⚡ **No additional bonding requirements for *FLAK JACKET*™ imposed by manufacturer's instructions™**

⚡ **Choose traditional Pro-Flex™ yellow CSST or new *FLAK JACKET*™ arc-resistant product based on applicable requirements in your jurisdiction**

⚡ **Same reliable dual-seal gasket and o-ring fittings interchangeable between *FLAK JACKET*™ arc-resistant tubing and traditional Pro-Flex™ yellow CSST**

FLAK JACKET™ is compliant with the following codes:
- **National Fuel Gas Code; ICC Code Series (International Fuel Gas, Mechanical, & Building Codes);**
- **IAPMO (Uniform Plumbing Code and Uniform Mechanical Code)**

FLAK JACKET™ is listed to the following national standard:
- **ANSI/LCI - CSA 6.26 - 2016**
- **"Fuel Gas Piping Systems Using Corrugated Stainless Steel Tubing (CSST)"**

Note: The bonding requirements for the arc-resistant Flak Jacket™ (black jacket) are the same as the requirements for the yellow jacketed Pro-Flex™ CSST EXCEPT where the AHJ allows otherwise, based on the jurisdiction's authority under the alternative approval provisions of the adopted codes and ordinances.

PRO-FLEX™

Pro-Flex 1™ Yellow CSST

- COST-SAVING ALTERNATIVE WHEN ELECTRICAL BONDING IS REQUIRED
- EXTRAORDINARY LABOR SAVINGS COMPARED TO BLACK STEEL
- ANNEALED "NO SPRING BACK" - TUBE BENDS AND STAYS BENT
- OFFERED IN VARIOUS LENGTHS INCLUDING 25'
