

Tork Advanced Soft Matic® Hand Towel Roll,

1-Ply

290095

Description

Quick-absorbing, thicker paper towel with improved softness and strength that feels more like cloth. Designed specifically for the Tork Elevation® Matic® Hand Towel Roll Dispensers, this Tork Advanced Soft Hand Towel offers a truly best-in-class product for no-touch, hygienic dispensing systems. Ideal for Class-A office buildings and upscale dining facilities.

- Long-lasting rolls minimize maintenance costs while maximizing service.
- Provides 1,136 towels/roll for the Tork Matic, 1,350 towels/roll with Intuition 8" setting to meet high capacity needs.
- One-at-a-time dispensing for reduced consumption and increased hygiene
- Environmental Label
- Advanced
- Tork Easy Handling ® Packaging

Environmental Information

Content	The product is made from Virgin pulp The packaging material is made from paper or plastic.
Material	Virgin fibers There are different methods used today for bleaching: ECF (elementary chlorine free, where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used. Virgin pulp fibers are produced out of softwood or hardwood. The wood is subject to chemical and/or mechanical processes where the cellulose fibers are separated out and lignin and other residuals are removed. Bleaching is a cleaning process of the fibers and the aim is to achieve a bright pulp, but also to get a certain purity of the fiber in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety.
Chemicals	All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view. To control product performance we use additives: • Wet strength agents (for Wipers and Hand Towels) • Dry strength agents (is used together with mechanical treatment of the pulp to make strong products like wipers) • For colored papers dyes and fixatives (to secure perfect fastness of the color) are added • For printing products printing inks (pigments with carriers and fixatives) are applied • For multi ply products we often use water soluble glue to secure the integrity of the product In most of our mills we do not add optical brighteners. We do not use softeners for professional hygiene products. High product quality is secured through quality and hygiene management systems throughout production, storage and transport. In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:

Tork Advanced Soft Matic® Hand Towel Roll,

1-Ply

290095

- defoamers (surfactants and dispersing agents)
- pH-control (sodium hydroxide and sulphuric acid)
- retention aids (chemicals that help to agglomerate small fibers to prevent fiber loss)
- Coating chemicals (that help to control the creping of the paper to make it soft and absorbent)

To reuse broke we use:

- Pulping aid (chemicals that help to repulp wet strong paper)

In the cleaning of our waste water we use flocculation agents and nutrients for the biological treatment to secure that no negative impact on water quality comes from our mills.

Environmental certification	This product is certified for FSC®.
Packaging	Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes
Article creation date and latest article revision	Date of issue: 19-04-2019 Revision date: 08-01-2025
Production	This product is produced at Essity Professional Hygiene NA Blending - US mill.
Destruction	This product is mainly used for personal hygiene and can be collected together with household waste.
