Hinge Selector Guide & Chart

KEIL® HINGE SELECTOR GUIDE

This hinge selector is designed to assist you in choosing the correct Keil hinges for commercial reach-in and walk-in refrigeration, foodservice equipment, transportation, industrial and other applications. The Load Chart below shows our recommended allowable load per pair of hinges for each hinge group.

The data supplied in this chart applies for normal operating conditions under static loading by door weight only. Other factors, such as positive or negative pressure, high gasket compression, lateral stress, corrosive or abrasive environments, or structural movement are not taken into account. It is the ultimate responsibility of the user to determine the suitability and capacity required for their specific application.

1. Locate the weight of your door in the far left column, headed **DOOR WEIGHT**.
2. Find the width of your door along the bottom of the chart.
3. Where the weight line and width column intersect, find the recommended hinge group code (A, B, etc.)
4. Select your hinges from the Keil® hinge groups below.

NOTE: If exact dimensions and weight for your door is not shown, use the next higher width and weight.

PRE-INSTALLATION TIPS

- Allow replacement gasket to reach room temperature before unfolding.
- Carry gasket by its corners and avoid squeezing folds to prevent breaking the internal magnetic strip.
- Thoroughly clean the area of the door where the gasket attaches, as well as the cabinet perimeter that the gasket face contacts.

DISTORTIONS

- Our gaskets are made from a vinyl material which can become distorted from folding. The folding is necessary to allow a practical and economically sized shipping parcel.
- The vinyl material retains a "memory" of its original shape so any distortions or kinks will only be temporary.
- Return to the original shape can be accelerated greatly by the application of heat, for example:

Immerse gasket in 140°-185°F (60°-85°C) water for 15 to 30 minutes before installing.

Apply heat from an electric hair dryer or heat lamp before and after installation. Care must be taken not to overheat and stretch or melt the material when using this method.
