## Installation & Adjusting Instructions

## **Sensor Mounting**

**r Hawkeye**™

- Mount sensor in 18.5 to 20mm diameter clearance hole using fastener(s) and lock washer provided. One fastener and lockwasher may be used when mounting against housing flange. Max torque for lock nut is 45 Nm (1 Nm=0.74 ft. lbs.)
- 2. Locate sensor so target will move within nominal sensing range and avoid contact with sensor face (mild steel less than 4mm, stainless steel less than 3 mm).
- Red and Green LED sensors may be mounted next to one another with no signal interference. Sensors of the same color LED should not be used together if sensors are closer than 45 mm (1.75").

## 2-Wire Sensor Specifications & Wiring Diagrams

Publ #105005revD Page 2

			3
Specifications:		Nominal Sensing Distance:	4 mm (Mild Steel Target)
Supply Voltage:	8 to 125 VDC, 24 to 125 VAC		3 mm (Stainless Steel Target)
Max Continuous Current:	0.3 Amp @ Rated Voltage	Temp Range:	- 40° F to 180° F (- 40° C to 82° C)
Max Inrush Current:	2.0 Amps	Housing Material & Fasteners:	316 Stainless Steel
Min Switching Current:	2.5 milliamps	Conduit Connection:	1/2"NPT
Max Leakage Current:	0.15 mA with DC voltage	Wiring:	36" length 18 gauge multi-strand
	0.25mA with AC voltage	Enclosure Protection:	NEMA 4, 4X & 6 / IP. 67
Maximum Voltage Drop:	6.5V @ 10 mA	Warranty:	5 Years
	7.5V @ 100 mA	-	
		1	

**To Bench Test a Hawkeye 2-Wire Sensor:** Use StoneL Light Read Tester. Or use a 24 VDC or 120 VAC power supply with series load resistor (2K - 6K  $\Omega$ ).

#### **Sensor Wiring**

- 1. Connect sensors per wiring diagram below.
- Sensors may be wired for Division 2 Hazardous locations using standard code practice for explosion proof systems. For Division 1 Hazardous areas intrinsically safe wiring and circuit protection must be followed. See Page Four for Intrinsic Safety wiring instructions

#### WARNING:

FAILURE TO USE A SERIES LOAD RESISTOR WHEN BENCH TESTING SENSORS WITH A POWER SUPPLY WILL RESULT IN PERMANENT DAMAGE TO THE UNIT.

Must use intrinsically safe repeater barrier.			

**To Bench Test a Hawkeye NAMUR Sensor:** Use StoneL Light Read Tester or a 24 VDC power supply. Sensors are polarity sensitive

Sensor Wiring - Connect sensors per wiring diagram below.

## FM (US) INSTALLATION NOTES:

Hawkeye Entity Parameters: Vmax = 30 Vdc Imax = 120 mA Ci = 0.066 µF Li = 0.794 mH

- > 1. Voc or Vt  $\leq$  Vmax, lsc or lt  $\leq$  lmax, Ca  $\geq$  Ci + Ccable, La  $\geq$  Li + Lcable.
- >2. For Class II and III, Division 1 installations, where conduit is not used, use Listed dust-tight cable-gland fittings.
- 3. Control equipment connected to intrinsic safety barrier must not use or generate more than 250 Vrms or Vdc.
- 4 4. Installation should be in accordance with ANSI/ISA RPA12.6 "Installation of Intrinsically Safe Systems for Hazardous (Classified) Locations" and the National Electrical Code (ANSI/NFPA 70).
- >5. The configuration of the intrinsic safety barrier for each Hawkeye sensor must be FMRC Approved.
- >6. Intrinsic safety barrier manufacturer's installation drawing must be followed when installing this equipment.
- 7. To maintain intrinsic safety, wiring associated with each Hawkeye sensor must be run in separate cables or separate shields connected to intrinsically safe (associated apparatus) ground.
- >8. Conduit Grounding Upon installation verify electrical continuity between conduit and ground terminal.
- >9. Resistance between Intrinsic Safe Ground and earth ground must be less than one ohm.

## CANADIAN INSTALLATION NOTES:

- Barrier must be a Canadian Certified, Single Channel grounded Shunt Diode Zener Barrier or a Single Channel Isolating Barrier, or; One dual-channel or two single-channel barriers may be used where both channels have been Certified for use together with combined entity parameters.
- 2 2. For Class II and III, Division 1 installations, where conduit is not used, use Canadian Certified dust-tight cable gland fittings.
- 3 3. Control equipment connected to Intrinsic Safety barriers must not use or generate more than 250 VRMS or VDC.
- 4 4. Install in accordance with the Canadian Electrical Code.
- 5 5. The configuration of intrinsic safety barriers for each Hawkeye sensor must be Canadian Certified.
- 6. Intrinsic safety barrier manufacturer's installation drawing must be followed when installing this equipment.
- 7. To maintain intrinsic safety, wiring associated with each Hawkeye sensor must be run in separate cables or separate shields connected to intrinsically safe (associated apparatus) ground.
- 8. Conduit Grounding Upon installation verify electrical continuity between conduit and ground terminal.
- >9. Resistance between Intrinsic Safe Ground and earth ground must be less than one ohm.

## **INSTALLATION NOTES (Ex ia IIC T5):**

Hawkeye Entity Parameters: Ui = 22 Vdc; Ii = 120 mA; Ci = 98 nF; Li = 1.56 mH; Pi = 2.0 W

- >> 1. Voc or Vt ≤ Ui, lsc or lt ≤ li, Ca ≥ Ci + Ccable, La ≥ Li + Lcable.
  - >2. Dust-tight conduit seal must be used when installed in Zone 20, Zone 21, and Zone 22 environments or where Ingress Protection of IP67 is required.
- 3. Control equipment connected to barrier must not use or generate more than 250 Vrms or Vdc.
- >4. Installation should be in accordance with appropriate local code or practice.
- >5. The configuration of associated apparatus for each sensor wiring pair or solenoid wiring pair must be approved.
- >6. Associated apparatus manufacturer's installation drawing must be followed when installing this equipment.
- 7. To maintain intrinsic safety, wiring associated with each sensor or solenoid coil wiring must be run in separate cables or separate shields connected to intrinsically safe (associated apparatus) ground.
- $\geq$ 8. Conduit Grounding Upon installation verify electrical continuity between conduit and ground terminal.
- >9. Resistance between Intrinsic Safe Ground and earth ground must be less than one ohm.
- > 10. Parts of the enclosure are non-conducting and may generate an ignition-capable level of electrostatic charge under certain extreme conditions. The user should ensure that the equipment is not installed in location where it may be subjected to external conditions (such as high-pressure steam) which might cause a build-up of electrostatic charge on non-conducting surfaces. Additionally, cleaning of the equipment should only be done with a damp cloth.
  - 11. Substitution of components may impair hazardous location safety.
