A template has been included to help you cut an accurate opening in the countertop. Cut out the template, position the template as desired, and trace it on the countertop. Drill a clearance hole inside the cutout line.

Cut out the countertop opening by carefully following the line traced from the template. Contact your countertop distributor for the best method of cutting your specific type of countertop (granite, laminate, etc).

Drill the required faucet holes and install the faucet according to the manufacturer's instructions.

Determine placement of clip brackets as indicated by template. Pre-drill holes according to method recommended for your countertop material.
